On the active part played by the heart in the venous return of the blood [RAE-LIB-TRANS-2017] N82-11766

HEART DISEASES
Computer quantitation of Q-T and terminal T wave /aT-eT/ intervals during exercise - Methodology and results in normal men A82-10633
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization A82-10750
Sarcoidosis and aeronautical risk A82-12310

HEART FUNCTION
Endurance training in the rat. I - Myocardial mechanics and biochemistry A82-11155
Endurance training in the rat. II - Performance of isolated and intact heart A82-11156
The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia A82-12299

HEART RATE
Cardiorespiratory responses and handgrip isometric component for various wheelchair propulsion systems N82-10718

HELMETS
Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews A82-12648

HEMATOLOGY
Body fluid and hematologic changes in the toad exposed to 48 h of simulated high altitude A82-11151

HEMATOPOIESIS
Inborn anemias in mice [DE81-029128] N82-10705

HEMODYNAMIC RESPONSES
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia A82-10749

HEMOGLOBIN
Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption A82-11154

HEREDITY
Inborn anemias in mice [DE81-029128] N82-10705

HUMAN BEHAVIOR
Instructor pilot teaching behavior and student pilot stress in flight training A82-11028

HUMAN FACTORS ENGINEERING
USSR report. Life sciences biomedical and behavioral sciences, no. 12 [JPRS-79338] N82-11762
Measuring/computing complex for automation of ergonomic experiments N82-11765

HUMAN PERFORMANCE
A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control A82-11027

HUMAN WASTES
Treatment of CELSS and PCELSS waste to produce nutrients for plant growth --- Controlled Ecological Life Support Systems and Partially Controlled Ecological Life Support Systems [ASME PAPER 81-ENAS-19] A82-10907

HYDRAZINES
Nitrogen supply system based on hydrazine dissociation [ASME PAPER 81-ENAS-27] A82-10914

HYPERCAPNIA
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia A82-10749

HYPEROXIA
Frequency analysis of EEG in rats during the preconvulsive period of O2 poisoning A82-11029

HYPERTENSION
A follow-up on blood pressure in two groups of air traffic controllers A82-12314
Effects of curative treatment emphasizing endurance training on the performance and blood pressure of hypertensive and normotensives [NASA-TM-76520] N82-11771

HYPOKINESIA
Cyclic nucleotides in tissues during long-term hypokinesia [NASA-TM-76726] N82-11757
Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesis [NASA-TM-76717] N82-11759

HYPOXIA
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia A82-10749
The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia A82-12299

I

IMAGE INTENSIFIERS
Color vision and image intensities: When are changes material? [AD-A103926] N82-10711

IMAGE PROCESSING
A computational theory of visual surface interpolation [AD-A103921] N82-10710
Evidence relating subjective contours and interpretations involving occlusion [AD-A103925] N82-10712

IMMOBILIZATION
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization A82-10750
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress [NASA-TM-76729] N82-11760

IMPACT DAMAGE
A homeomorphic finite element model of impact head injury N82-10707

INDUSTRIAL SAFETY
Carbon/graphite fibers: Environmental exposures and potential health implications [PB81-229692] N82-11780

INFECTIOUS DISEASES
Sarcoidosis and aeronautical risk A82-12310

INFORMATION SYSTEMS
Remote Medical Diagnosis System RMDS design review meeting minutes [AD-A104555] N82-11772

INFORMATION THEORY
Equation counting and the interpretation of sensory data [AD-A103924] N82-10713
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts [DE81-030434] N82-11774

INSECTICIDES
Hazards of chemicals used in agricultural aviation - A review A82-11026

**INSTRUCTORS**
Instructor pilot teaching behavior and student pilot stress in flight training
A82-11028

**INTEGRAL EQUATIONS**
Interaction of electromagnetic fields with biological bodies
A82-11539

**ION EXCHANGING**
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909

**IRON COMPOUNDS**
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

K

**KEVLAR (TRADEMARK)**
Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews
A82-12648

L

**LASER APPLICATIONS**
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758

**LENSES**
Aphakia in the flier - Its consequences and correction
A82-12316

**LESIONS**
Sarcoidosis and aeronautical risk
A82-12310
Peripheral chorioretinal lesions and aeronautical flight personnel Consequences for fitness
A82-12315

**LIFE SCIENCES**
Design, development, and verification of Life Sciences experiments
A82-12538

**LIFE SUPPORT SYSTEMS**
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899
The potential role of aerobic biological waste treatment in regenerative life support systems
[ASME PAPER 81-ENAS-20] A82-10908
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913
Nitrogen supply system based on hydrazine dissociation
[ASME PAPER 81-ENAS-27] A82-10914
The CELSS program - An overview of its structure and use of computer modelling
[ASME PAPER 81-ENAS-36] A82-10922
An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies
[ASME PAPER 81-ENAS-38] A82-10924
Design and control strategies for CELSS - Integrating mechanistic paradigms and biological complexities
[ASME PAPER 81-ENAS-43] A82-10927
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929

**LIMONITE**
Are the 3,800-Myr-old Isua objects microfossils, limonite-stained fluid inclusions, or neither
A82-10550

**LITHIUM HYDROXIDES**
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913

**LIVER**
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization
A82-10750
The effects of space flight factors on the stress reaction of the nuclear nucleic acids in the rat liver
A82-12279

**LOGIC CIRCUITS**
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

**LONG DURATION SPACE FLIGHT**
Nitrogen supply system based on hydrazine dissociation
[ASME PAPER 81-ENAS-27] A82-10914
Unconventional processes for food regeneration in space - An overview
[ASME PAPER 81-ENAS-35] A82-10921
Oxygen generation subsystem for spacecraft
[ASME PAPER 81-ENAS-40] A82-10925

**LONG TERM EFFECTS**
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

**LUNGS**
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia
A82-10749

**LYMPHOCYTES**
Human lymphocyte calcium metabolism
N82-11769

M

**MAMMALS**
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030

**MAN MACHINE SYSTEMS**
A methodology for decision augmentation system design --- airborne computer as aircrew performance aid
[AIAA 81-2201] A82-10139
The CELSS program - An overview of its structure and use of computer modelling
[ASME PAPER 81-ENAS-36] A82-10922
An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies
[ASME PAPER 81-ENAS-38] A82-10924
A Monte-Carlo simulation investigating means of human-computer communication for dynamic task allocation
[AD-A103890] N82-10721

**MANNED SPACE FLIGHT**
The potential role of aerobic biological waste treatment in regenerative life support systems
[ASME PAPER 81-ENAS-20] A82-10908
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
Regenerable CO2 collection for spacecraft application
[ASME PAPER 81-ENAS-28] A82-10915
An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies
[ASME PAPER 81-ENAS-38] A82-10924

**MARINE BIOLOGY**
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

**MARINE RESOURCES**
A human being in the sea. Part 2: Development trends in submarine technology --- diving apparatus, rescue techniques, marine resources
[FOA-C-58008-H3-PT-2] N82-10714

**MASKS**
The influence of beard, beard-stubble and age wrinkles on the adjustment of protective masks
[FOA-A-40034-C2/A2/ B2] N82-10722

MASS SPECTROSCOPY
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773

MATERIALS TESTS
Aircraft cabin furnishing materials - A toxicological problem
A82-12311

MATHEMATICAL MODELS
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Time and information model of human Memory Organization
N82-11763

MECHANICAL IMPEDANCE
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767

MEDICAL ELECTRONICS
Medical research activities in the Netherlands
[TNO-MFI-PR-7] N82-10716

MEDICAL EQUIPMENT
Salyut 6 medical monitoring techniques
A82-11924
Medical research activities in the Netherlands
[TNO-MFI-PR-7] N82-10716

MEMORY
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Time and information model of human Memory Organization
N82-11763

METABOLIC DISEASES
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization
A82-10750

MICE
Inborn anemias in mice
[DE81-029128] N82-10705

MICROORGANISMS
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929

MINERAL METABOLISM
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

MINERALS
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909

MINING
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783

MIXING
Airway gas mixing during rest and bicycle exercise
N82-11768

MONTE CARLO METHOD
A Monte-Carlo simulation investigating means of human-computer communication for dynamic task allocation
[AD-A103890] N82-10721

MUSCULAR FUNCTION
Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesia
[NASA-TM-76717] N82-11759

MUSCULOSKELETAL SYSTEM
Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption
A82-11154

MYOCARDIAL INFARCTION
The electrocardiographic diagnosis of myocardial infarction in the presence of ventricular conduction defects - A new attempt to solve an old problem
A82-11199

MYOCARDIUM
Endurance training in the rat. I - Myocardial mechanics and biochemistry
A82-11155

N

NASA PROGRAMS
Design, development, and verification of Life Sciences experiments
A82-12538

NEUROPHYSIOLOGY
Neurophysiological bases for the effects of trace elements --- Russian book
A82-12223

NEUTRON ACTIVATION ANALYSIS
Cadmium analysis in vivo --- neutron activation analysis, tissues
[FOA-C-40126-H4(C3)] N82-10715

NITROGEN
Nitrogen supply system based on hydrazine dissociation
[ASME PAPER 81-ENAS-27] A82-10914

NONDESTRUCTIVE TESTS
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773

NOREPINEPHRINE
Plasma norepinephrine response to exercise before and after training in humans
A82-11152

NUCLEAR PHYSICS
Radiation physics, biophysics and radiation biology
[DE81-025259] N82-10704

NUCLEAR SCATTERING
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

NUCLEIC ACIDS
The effects of space flight factors on the stress reaction of the nuclear nucleic acids in the rat liver
A82-12279

NUCLEOTIDES
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

NUTRIENTS
Treatment of CELSS and PCELSS waste to produce nutrients for plant growth --- Controlled Ecological Life Support Systems and Partially Controlled Ecological Life Support Systems
[ASME PAPER 81-ENAS-19] A82-10907

O

OCCLUSION
Evidence relating subjective contours and interpretations involving occlusion
[AD-A103925] N82-10712

OCEAN BOTTOM
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

ONBOARD DATA PROCESSING
A methodology for decision augmentation system design --- airborne computer as aircrew performance aid
[AIAA 81-2201] A82-10139

ONBOARD EQUIPMENT
Salyut 6 medical monitoring techniques
A82-11924

OTOLITH ORGANS
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Otolithic reflex and space perception function of cosmonauts
N82-11764

OXIDATION
Wet oxidation as a waste treatment in closed systems
[ASME PAPER 81-ENAS-22] A82-10910

OXYGEN CONSUMPTION
Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption
A82-11154
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

**OXYGEN METABOLISM**
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

**OXYGEN PRODUCTION**
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897

**OXYGEN SUPPLY EQUIPMENT**
Oxygen generation subsystem for spacecraft
[ASME PAPER 81-ENAS-40] A82-10925
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783

**OZONOMETRY**
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

# P

**PARACHUTE DESCENT**
Physiopathology and pathology of spinal ailments in aerospace medicine
[AGARD-AG-250-FR] N82-10720

**PATTERN RECOGNITION**
A computational theory of visual surface interpolation
[AD-A103921] N82-10710

**PERFORMANCE TESTS**
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898

**PERSPIRATION**
The role of skin temperature in the control of sweating in man
N82-10708

**PETROLEUM PRODUCTS**
Energy expenditure and dietary change
[PB81-218471] N82-10717

**PHOTOSYNTHESIS**
Model systems in photosynthesis research
[DE81-023889] N82-10706

**PHYSICAL EXERCISE**
Progress in computer analysis of the exercise electrocardiogram
A82-10630
Evaluation of abnormal exercise electrocardiogram in apparently healthy subjects - Labile repolarization /ST-T/ abnormalities as a cause of false positive responses
A82-10631
Variations in normal electrocardiographic response to treadmill testing
A82-10632
Endurance training in the rat. I - Myocardial mechanics and biochemistry
A82-11155
Noninvasive assessment of T-wave abnormalities on precordial electrocardiograms in middle-aged professional bicyclists
A82-11200
The effects of cold- and exercise-induced alterations in skin and core temperature on substrate mobilization and utilization
N82-10719
Airway gas mixing during rest and bicycle exercise
N82-11768
Effects of curative treatment emphasizing endurance training on the performance and blood pressure of hypertensive and normotensives
[NASA-TM-76520] N82-11771

**PHYSICAL FITNESS**
Plasma norepinephrine response to exercise before and after training in humans
A82-11152
Endurance training in the rat. II - Performance of isolated and intact heart
A82-11156

**PHYSIOLOGICAL EFFECTS**
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

**PHYSIOLOGICAL RESPONSES**
Evaluation of abnormal exercise electrocardiogram in apparently healthy subjects - Labile repolarization /ST-T/ abnormalities as a cause of false positive responses
A82-10631
Variations in normal electrocardiographic response to treadmill testing
A82-10632
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization
A82-10750
Frequency analysis of EEG in rats during the preconvulsive period of O2 poisoning
A82-11029
Body fluid and hematologic changes in the toad exposed to 48 h of simulated high altitude
A82-11151
Factors determining temporal pattern of isobaric supersaturation --- in tissue blood gas transport models of bubble production
A82-11153
The significance of the respiratory minute volume index in the evaluation of vestibular stability
A82-11697
The effects of space flight factors on the stress reaction of the nuclear nucleic acids in the rat liver
A82-12279
The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia
A82-12299
The role of skin temperature in the control of sweating in man
N82-10708

**PHYSIOLOGICAL TESTS**
Plasma norepinephrine response to exercise before and after training in humans
A82-11152
Endurance training in the rat. II - Performance of isolated and intact heart
A82-11156

**PILOT SELECTION**
Sarcoidosis and aeronautical risk
A82-12310

**PILOT TRAINING**
Instructor pilot teaching behavior and student pilot stress in flight training
A82-11028

**PLANKTON**
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

**PLANTS (BOTANY)**
Treatment of CELSS and PCELSS waste to produce nutrients for plant growth --- Controlled Ecological Life Support Systems and Partially Controlled Ecological Life Support Systems
[ASME PAPER 81-ENAS-19] A82-10907
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911
A chamber design for closed ecological systems research
[ASME PAPER 81-ENAS-37] A82-10923

**PLASTICS**
Radiation physics, biophysics and radiation biology
[DE81-025259] N82-10704

**POLLUTION MONITORING**
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758

**POTABLE WATER**
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929

**PRESBYOPIA**
Presbyopia in flight personnel - Its repercussions and correction
A82-12312

**PROPELLANT DECOMPOSITION**
Nitrogen supply system based on hydrazine dissociation
[ASME PAPER 81-ENAS-27] A82-10914

PROPULSION SYSTEM PERFORMANCE
Cardiorespiratory responses and handgrip isometric component for various wheelchair propulsion systems
N82-10718
PROTEIN SYNTHESIS
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757
Molecular events basic to cellular radiation response
[DE81-027898] N82-11776
PUBLIC HEALTH
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780
PULMONARY CIRCULATION
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia
A82-10749
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778
PULMONARY FUNCTIONS
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779
PULSED RADIATION
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030

Q

QUANTITATIVE ANALYSIS
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773

R

RADAR TRACKING
A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control
A82-11027
RADIATION COUNTERS
Radiation physics, biophysics and radiation biology
[DE81-025259] N82-10704
RADIATION DOSAGE
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774
RADIATION EFFECTS
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030
Molecular events basic to cellular radiation response
[DE81-027898] N82-11776
RADIATION HAZARDS
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774
RADIOACTIVE WASTES
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774
RADIOBIOLOGY
Interaction of electromagnetic fields with biological bodies
A82-11539
REACTOR DESIGN
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899
RECEPTORS (PHYSIOLOGY)
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization
A82-10750
RECYCLING
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909
REDUCTION (CHEMISTRY)
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899
REFLEXES
Otolithic reflex and space perception function of cosmonauts
N82-11764
REGRESSION ANALYSIS
A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control
A82-11027
REGULATIONS
Information of mission and functions of the National Bureau of Standards
[PB81-228207] N82-11761
REMOTE SENSING
Laser induced fluoroescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758
RESCUE OPERATIONS
A human being in the sea. Part 2: Development trends in submarine technology --- diving apparatus, rescue techniques, marine resources

## S

**S WAVES**
Evaluation of abnormal exercise electrocardiogram in apparently healthy subjects - Labile repolarization /ST-T/ abnormalities as a cause of false positive responses
A82-10631

**SABATIER REACTION**
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899

**SALYUT SPACE STATION**
Salyut 6 medical monitoring techniques
A82-11924

**SENSORY PERCEPTION**
Evidence relating subjective contours and interpretations involving occlusion
[AD-A103925] N82-10712
Equation counting and the interpretation of sensory data
[AD-A103924] N82-10713

**SEQUENCING**
Altered tissue reactivity and interactions between chemicals
[DE81-023169] N82-11777

**SKIN (ANATOMY)**
The influence of beard, beard-stubble and age wrinkles on the adjustment of protective masks
[FOA-A-40034-C2/A2/ B2] N82-10722
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767

**SKIN TEMPERATURE (BIOLOGY)**
The role of skin temperature in the control of sweating in man
N82-10708
The effects of cold- and exercise-induced alterations in skin and core temperature on substrate mobilization and utilization
N82-10719

**SLEEP**
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

**SOLID ELECTROLYTES**
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897

**SPACE FLIGHT FEEDING**
Unconventional processes for food regeneration in space - An overview
[ASME PAPER 81-ENAS-35] A82-10921

**SPACE FLIGHT STRESS**
The effects of space flight factors on the stress reaction of the nuclear nucleic acids in the rat liver
A82-12279
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Otolithic reflex and space perception function of cosmonauts
N82-11764

**SPACE MISSIONS**
A regenerative life support system for Space Operations Center /SOC/ A probable first flight application
[ASME PAPER 81-ENAS-12] A82-10900

**SPACE SHUTTLE ORBITERS**
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913

**SPACE SHUTTLE PAYLOADS**
Design, development, and verification of Life Sciences experiments
A82-12538

**SPACE SHUTTLES**
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929

**SPACEBORNE EXPERIMENTS**
Design, development, and verification of Life Sciences experiments
A82-12538

**SPACECRAFT CABIN ATMOSPHERES**
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913
Regenerable CO2 collection for spacecraft application
[ASME PAPER 81-ENAS-28] A82-10915

**SPACECRAFT CONTAMINATION**
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929

**SPACECRAFT ENVIRONMENTS**
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911
The CELSS program - An overview of its structure and use of computer modelling
[ASME PAPER 81-ENAS-36] A82-10922
Oxygen generation subsystem for spacecraft
[ASME PAPER 81-ENAS-40] A82-10925
Design and control strategies for CELSS - Integrating mechanistic paradigms and biological complexities
[ASME PAPER 81-ENAS-43] A82-10927

**SPACECRAFT POWER SUPPLIES**
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913

**SPHYGMOGRAPHY**
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

**SPINAL CORD**
Retro-hyperflexion luxation - Mechanism of cervical spinal cord contusion injury during ejection sequence
A82-11032
Physiopathology and pathology of spinal ailments in aerospace medicine
[AGARD-AG-250-FR] N82-10720

**SPINE**
A homeomorphic finite element model of impact head injury
N82-10707

**STRESS (PHYSIOLOGY)**
The effects of space flight factors on the stress reaction of the nuclear nucleic acids in the rat liver
A82-12279

**STRESS (PSYCHOLOGY)**
Instructor pilot teaching behavior and student pilot stress in flight training
A82-11028

**SUBMARINES**
A human being in the sea. Part 2: Development trends in submarine technology --- diving apparatus, rescue techniques, marine resources
[FOA-C-58008-H3-PT-2] N82-10714

**SUBMERGED BODIES**
A human being in the sea. Part 2: Development trends in submarine technology --- diving apparatus, rescue techniques, marine resources
[FOA-C-58008-H3-PT-2] N82-10714

**SUBSTRATES**
The effects of cold- and exercise-induced alterations in skin and core temperature on substrate mobilization and utilization
N82-10719

**SUCTION**
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766

**SUPERSATURATION**
Factors determining temporal pattern of isobaric supersaturation --- in tissue blood gas transport models of bubble production
A82-11153

**SURGERY**
Aphakia in the flier - Its consequences and correction
A82-12316

**SWEAT COOLING**
The role of skin temperature in the control of sweating in man
N82-10708

**SYNCHRONISM**
Cardiorespiratory responses and handgrip isometric component for various wheelchair propulsion systems
N82-10718

**SYSTEMS ANALYSIS**
Measuring/computing complex for automation of ergonomic experiments
N82-11765

**SYSTEMS ENGINEERING**
A regenerative life support system for Space Operations Center /SOC/ A probable first flight application
[ASME PAPER 81-ENAS-12] A82-10900
Design and control strategies for CELSS - Integrating mechanistic paradigms and biological complexities
[ASME PAPER 81-ENAS-43] A82-10927

**SYSTEMS SIMULATION**
An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies
[ASME PAPER 81-ENAS-38] A82-10924

**SYSTOLE**
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766

T

**TECHNOLOGY ASSESSMENT**
Unconventional processes for food regeneration in space - An overview
[ASME PAPER 81-ENAS-35] A82-10921

**TENSILE STRENGTH**
Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews
A82-12648

**TEST CHAMBERS**
A chamber design for closed ecological systems research
[ASME PAPER 81-ENAS-37] A82-10923

**TEST FACILITIES**
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Measuring/computing complex for automation of ergonomic experiments
N82-11765

**THERMAL POLLUTION**
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

**THERMOREGULATION**
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

**THROMBIN**
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760

**TISSUES (BIOLOGY)**
Factors determining temporal pattern of isobaric supersaturation --- in tissue blood gas transport models of bubble production
A82-11153
Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption
A82-11154
Interaction of electromagnetic fields with biological bodies
A82-11539
Cadmium analysis in vivo --- neutron activation analysis, tissues
[FOA-C-40126-W4(C3)] N82-10715
Altered tissue reactivity and interactions between chemicals
[DE81-023189] N82-11777

**TOXIC HAZARDS**
Hazards of chemicals used in agricultural aviation - A review
A82-11026
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780

**TOXICITY AND SAFETY HAZARD**
Aircraft cabin furnishing materials - A toxicological problem
A82-12311

**TOXICOLOGY**
Aircraft cabin furnishing materials - A toxicological problem
A82-12311

**TRACE ELEMENTS**
Neurophysiological bases for the effects of trace elements --- Russian book
A82-12223
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

**TRAINING EVALUATION**
A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control
A82-11027

**TREADMILLS**
Variations in normal electrocardiographic response to treadmill testing
A82-10632

U

**U.S.S.R. SPACE PROGRAM**
USSR Space Life Sciences Digest, volume 1, no. 3
[NASA-CR-164780] N82-10699
USSR Space Life Sciences Digest, volume 1, no. 4
[NASA-CR-164781] N82-10700
USSR Space Life Sciences Digest, volume 2, no.1
[NASA-CR-164782] N82-10701
USSR Space Life Sciences Digest, volume 2, no. 2
[NASA-CR-164783] N82-10702

**ULTRASONIC RADIATION**
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030

V

**VESTIBULAR NYSTAGMUS**
The significance of the respiratory minute volume index in the evaluation of vestibular stability
A82-11697

**VESTIBULAR TESTS**
The significance of the respiratory minute volume index in the evaluation of vestibular stability
A82-11697
Otolithic reflex and space perception function of cosmonauts
N82-11764

**VISUAL ACUITY**
Presbyopia in flight personnel - Its repercussions and correction
A82-12312

**VISUAL PERCEPTION**
A computational theory of visual surface interpolation
[AD-A103921] N82-10710
Evidence relating subjective contours and interpretations involving occlusion
[AD-A103925] N82-10712
Equation counting and the interpretation of sensory data
[AD-A103924] N82-10713

**VOLUMETRIC ANALYSIS**
The importance of volumetric and anthropometric techniques in the measurement of lean body mass
A82-12313

W

**WASTE TREATMENT**
Treatment of CELSS and PCELSS waste to produce nutrients for plant growth --- Controlled Ecological Life Support Systems and Partially Controlled Ecological Life Support Systems
[ASME PAPER 81-ENAS-19] A82-10907
The potential role of aerobic biological waste treatment in regenerative life support systems
[ASME PAPER 81-ENAS-20] A82-10908
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909

Wet oxidation as a waste treatment in closed systems
[ASME PAPER 81-ENAS-22] A82-10910
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911
WASTE UTILIZATION
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
WASTE WATER
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
WATER
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897
WATER RECLAMATION
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
Advanced Microbial Check Valve development --- for Space Shuttle
[ASME PAPER 81-ENAS-45] A82-10929
WHIPLASH INJURIES
A homeomorphic finite element model of impact head injury
N82-10707
WRINKLING
The influence of beard, beard-stubble and age wrinkles on the adjustment of protective masks
[FOA-A-40034-C2/A2/ B2] N82-10722

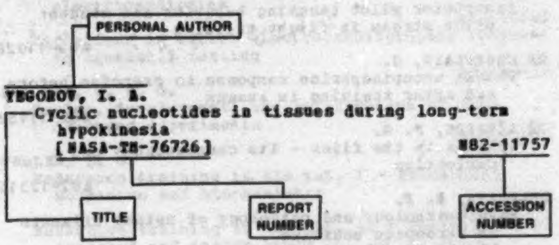
X

X RAY IRRADIATION
Molecular events basic to cellular radiation response
[DE81-027898] N82-11776

# PERSONAL AUTHOR INDEX

**AEROSPACE MEDICINE AND BIOLOGY**/*A Continuing Bibliography (Suppl. 229)* FEBRUARY 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**AFANASYEV, O. V.**
Measuring/computing complex for automation of ergonomic experiments
N82-11765

**AKOPIAN, N. S.**
The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia
A82-12299

**AMIN, A.**
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030

**ARAOYE, M. A.**
The electrocardiographic diagnosis of myocardial infarction in the presence of ventricular conduction defects - A new attempt to solve an old problem
A82-11199

**AUFFRET, R.**
Physiopathology and pathology of spinal ailments in aerospace medicine
[AGARD-AG-250-FR] N82-10720

**AUSLANDER, D. M.**
An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies
[ASME PAPER 81-ENAS-38] A82-10924

**AVERNER, M. M.**
The CELSS program - An overview of its structure and use of computer modelling
[ASME PAPER 81-ENAS-36] A82-10922

**AVULA, X. J. R.**
Biaxial finite deformations of arterial and venous segments under + or - G/z/ acceleration stress
A82-12036

## B

**BAKER, J. T.**
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

**BAKLAVADZHIAN, O. G.**
The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia
A82-12299

**BALLION, J. C.**
Peripheral chorioretinal lesions and aeronautical flight personnel Consequences for fitness
A82-12315

**BALLOU, E.**
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909

**BARKER, J. E.**
Inborn anemias in mice
[DE81-029128] N82-10705

**BAZAZYAN, G. G.**
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760

**BEAL, D. P.**
Cardiorespiratory responses and handgrip isometric component for various wheelchair propulsion systems
N82-10718

**BEGOVICH, C. L.**
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

**BELAK, M.**
Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesis
[NASA-TM-76717] N82-11759

**BERGER, R. J.**
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

**BERGMAN, R.**
Cadmium analysis in vivo
[FOA-C-40126-M4(C3)] N82-10715

**BERNSTEIN, S. E.**
Inborn anemias in mice
[DE81-029128] N82-10705

**BERRY, D. R.**
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783

**BHARGAVA, V.**
Progress in computer analysis of the exercise electrocardiogram
A82-10630

**BISWAS, H. M.**
Body fluid and hematologic changes in the toad exposed to 48 h of simulated high altitude
A82-11151

**BOBKOV, A. I.**
Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization
A82-10750

**BODA, K.**
Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesis
[NASA-TM-76717] N82-11759

**BOHME, W.**
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766

**BOONE, J. O.**
A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control
A82-11027

BORAL, H. C.
Body fluid and hematologic changes in the toad exposed to 48 h of simulated high altitude
A82-11151

BOUCHER, R. C.
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

BOULIER, A.
The importance of volumetric and anthropometric techniques in the measurement of lean body mass
A82-12313

BROMBERG, P. A.
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

BROSE, H. F.
A regenerative life support system for Space Operations Center /SOC/ A probable first flight application
[ASME PAPER 81-ENAS-12] A82-10900

BURKE, K. A.
Oxygen generation subsystem for spacecraft
[ASME PAPER 81-ENAS-40] A82-10925

BURUSUZOV, R. P.
Measuring/computing complex for automation of ergonomic experiments
N82-11765

C

CARDEN, J.
Treatment of CELSS and PCELSS waste to produce nutrients for plant growth
[ASME PAPER 81-ENAS-19] A82-10907

CASSEL, B.
A human being in the sea. Part 2: Development trends in submarine technology
[FOA-C-58008-H3-PT-2] N82-10714

CHELNAYA, N. A.
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

CHEN, C.-H.
Noninvasive assessment of T-wave abnormalities on precordial electrocardiograms in middle-aged professional bicyclists
A82-11200

CHEN, K.-M.
Interaction of electromagnetic fields with biological bodies
A82-11539

CHESTER, R. O.
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

CLEROUX, J.
Plasma norepinephrine response to exercise before and after training in humans
A82-11152

COHN, S. H.
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

COLLIER, R. W.
The trace element geochemistry of marine biogenic particulate matter
[AD-A095300] N82-10703

COLLING, A. K., JR.
Lightside atmospheric revitalization system for Space Shuttle Orbiter
[ASME PAPER 81-ENAS-26] A82-10913

COLOMBO, G. V.
Advanced Microbial Check Valve development
[ASME PAPER 81-ENAS-45] A82-10929

CONSTABLE, S. H.
Instructor pilot teaching behavior and student pilot stress in flight training
A82-11028

COUSINEAU, D.
Plasma norepinephrine response to exercise before and after training in humans
A82-11152

CUSICK, R. J.
Development of an advanced Sabatier CO2 reduction subsystem
[ASME PAPER 81-ENAS-11] A82-10899

D

DAOUST, B. G.
Factors determining temporal pattern of isobaric supersaturation
A82-11153

DARST, P. W.
Instructor pilot teaching behavior and student pilot stress in flight training
A82-11028

DE CHAMPLAIN, J.
Plasma norepinephrine response to exercise before and after training in humans
A82-11152

DE LINIERS, F. G.
Aphakia in the flier - Its consequences and correction
A82-12316

DELAHAYE, R. P.
Physiopathology and pathology of spinal ailments in aerospace medicine
[AGARD-AG-250-FR] N82-10720

DELCROIX, J. P.
Aircraft cabin furnishing materials - A toxicological problem
A82-12311

DOURY, P.
Physiopathology and pathology of spinal ailments in aerospace medicine
[AGARD-AG-250-FR] N82-10720

DRECHSLER, D. M.
Airway gas mixing during rest and bicycle exercise
N82-11768

DVORETSKII, D. P.
Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia
A82-10749

E

ECKERMAN, K. F.
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

ELLIS, G. S.
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912

ELLIS, K. J.
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

ELS, H.
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767

ERICKSON, A. C.
Development status of a preprototype water electrolysis subsystem
[ASME PAPER 81-ENAS-9] A82-10897

EVRARD, E.
A follow-up on blood pressure in two groups of air traffic controllers
A82-12314

F

FABRE, J.
The importance of volumetric and anthropometric techniques in the measurement of lean body mass
A82-12313

FISCHER, J.
Variations in normal electrocardiographic response to treadmill testing
A82-10632

FOSTER, K. R.
Lack of effect of pulsed ultrasound on the mammalian EEG
A82-11030

FRICKS, D. H.
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898

FRIEDMAN, M.
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

FROELICHER, V. F.
Progress in computer analysis of the exercise electrocardiogram
A82-10630
Variations in normal electrocardiographic response to treadmill testing
A82-10632

FULCHER, C. W. G.
Design, development, and verification of Life Sciences experiments
A82-12538

FULLER, E. O.
Endurance training in the rat. I - Myocardial mechanics and biochemistry
A82-11155
Endurance training in the rat. II - Performance of isolated and intact heart
A82-11156

G

GANZEN, V. A.
Time and information model of human Memory Organization
N82-11763

GAY, A.
Sarcoidosis and aeronautical risk
A82-12310

GOLDMAN, M. J.
The electrocardiographic diagnosis of myocardial infarction in the presence of ventricular conduction defects - A new attempt to solve an old problem
A82-11199

GREENLEY, D. R.
Advanced Microbial Check Valve development
[ASME PAPER 81-ENAS-45] A82-10929

GRIMSON, W. E. L.
A computational theory of visual surface interpolation
[AD-A103921] N82-10710

GUERBET, M.
Aircraft cabin furnishing materials - A toxicological problem
A82-12311

GUSAROV, A. S.
The significance of the respiratory minute volume index in the evaluation of vestibular stability
A82-11697

H

HANSEN, B. D., III
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911

HARMISON, L. T.
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780

HARTMANN, B.
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758

HASKELL, E. H.
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

HAZUCHA, M. J.
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

HAZZARD, R. C.
Retro-hyperflexion luxation - Mechanism of cervical spinal cord contusion injury during ejection sequence
A82-11032

HELLER, H. C.
Metabolism and thermoregulation during stages of sleep in humans exposed to heat and cold
A82-11157

HEPPNER, D. B.
Nitrogen supply system based on hydrazine dissociation
[ASME PAPER 81-ENAS-27] A82-10914

HINDMAN, J. C.
Model systems in photosynthesis research
[DE81-023089] N82-10706

HLASTALA, M. P.
Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption
A82-11154

HOFFLER, G. W.
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

HOFFMAN, D. D.
Equation counting and the interpretation of sensory data
[AD-A103924] N82-10713

HOPSON, J.
A methodology for decision augmentation system design
[AIAA 81-2201] A82-10139

HOSEY, R. R.
A homeomorphic finite element model of impact head injury
N82-10707

HOSHIZAKI, T.
Generic waste management requirements for a controlled ecological life support system /CELSS/
[ASME PAPER 81-ENAS-23] A82-10911

HURLEY, B. F.
The effects of cold- and exercise-induced alterations in skin and core temperature on substrate mobilization and utilization
N82-10719

HURSTA, W. N.
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

I

IGONIN, D. A.
Time and information model of human Memory Organization
N82-11763

J

JARVI, D. W.
Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104684] N82-11781

JOHNSSON, P. G.
The influence of beard, beard-stubble and age wrinkles on the adjustment of protective masks
[FOA-A-40034-C2/A2/ B2] N82-10722

JOHNSON, C. C.
Ion-exchange chromatography separation applied to mineral recycle in closed systems
[ASME PAPER 81-ENAS-21] A82-10909

JOHNSON, K. L.
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 230)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in February 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS) Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 244 reports, articles and other documents announced during February 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697 #** **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti)**. A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

## A Continuing Bibliography (Suppl. 230)

MARCH 1982

## IAA ENTRIES

**A82-12869** **Eye movement measurement of readability of CRT displays.** P. A. Kolers, R. L. Duchnicky, and D. C. Ferguson (Toronto, University, Toronto, Canada). *Human Factors,* vol. 23, Oct. 1981, p. 517-527. 15 refs. Research supported by the Department of Communications.

Eye movement was recorded as people read texts presented on a CRT in two different spacings, two different character densities, and at five different scrolling rates. Differences in efficiency of reading single- and double-spacing were statistically significant, but were of little practical significance. Character densities of 35 characters or 70 characters per line favored the smaller-size character with respect to efficiency of reading. Comparison of scrolling rates suggested that the static page was processed more efficiently than was the page scrolled at the subject's preferred rate or at a rate 10% slower than that; pages presented faster than the preferred rate were read more efficiently. Little if any change in preferred rate occurred as a function of practice with 16 pages of text. Systems in which, by program control, text was presented at rates 10% or 20% faster than the preferred scrolling rate should lead to more efficient performance, but might create some problems of user acceptance. (Author)

**A82-12870** **Visual fatigue and cathode ray tube display terminals.** R. R. Mourant, R. Lakshmanan, and R. Chantadisai (Oakland University, Rochester, MI). *Human Factors,* vol. 23, Oct. 1981, p. 529-540. 6 refs. Research supported by Oakland University.

The results of experiments to determine the effects of cathode ray tube (CRT) usage on visual fatigue are reported. Two studies were conducted: two 3-hr sessions, in which subjects were divided into recommended contrast (20) and low contrast (1.61 and 3.18) CRT users and hard copy (5.25 and 2.18 contrast), with a one hour break between sessions; and two 2-hr sessions, with the hard copy contrast at 5.25 and the CRT at 20. The second study was to observe the effects of age, of the presence of a peripheral column of figures, and of blink frequency as an indicator of fatigue. CRT employment was found to have a measurably greater impact on eye fatigue than hard copy reading, although the effects were ameliorated with breaks in the routine. Age did not have a perceptible effect on fatigue; blink rate and outfocus time increased in both tests with the CRT, and the presence of a peripheral column resulted in less fatigue in the two-hour set. Further studies using a larger sample are recommended, as well as regular breaks for CRT users. M.S.K.

**A82-12871** **An evaluation of alphanumeric, graphic, and color information displays.** T. S. Tullis. *Human Factors,* vol. 23, Oct. 1981, p. 541-550. 9 refs.

Four different types of CRT diplay formats were evaluated in the context of a computer-based telephone line testing system. The formats considered were narrative, which used complete words and phrases; structured, which used a tabular format; black-and-white graphics, which used a schematic of the telephone line; and color graphic, which also used a schematic but added color coding. The evaluation measured speed and accuracy of the subjects' interpretation of the displays of test results. Accuracy did not significantly vary with format but speed did. Response times for both graphic formats were consistently shorter than those for the narrative format. With additional practice, however, response times for the structured format were just as short. There was no significant difference between response times for the black-and-white graphic and color graphic formats. (Author)

**A82-12873** **Effects of visual display units on the eyes - A bibliography /1972-1980/.** R. A. Matula (Bell Telephone Laboratories, Inc., Murray Hill, NJ). *Human Factors,* vol. 23, Oct. 1981, p. 581-586. 140 refs.

Visual display units (VDUs) have been reported to cause such eye difficulties as eyestrain, visual discomfort, and visual fatigue. In addition, there are effects on visual accomodation as well as effects arising from contrast and glare sensitivity. This bibliography brings together in one place the widely dispersed literature on the effects of VDUs on the eyes. (Author)

**A82-12874** **The interaction between the edge effect and target conspicuity in visual search.** T. H. Monk (Medical Research Council, Perceptual and Cognitive Performance Unit, Brighton, England). *Human Factors,* vol. 23, Oct. 1981, p. 615-625. 13 refs.

The term 'edge effect' in visual search is used to describe the finding that targets appearing in the outer half of a display have longer search times than those appearing in the inner half. The interaction between the edge effect and target conspicuity was explored using two experiments. Under conditions of target uncertainty, it was shown that the magnitude of the edge effect was unaffected by target conspicuity. In addition, two manipulations of the edge effect indicated that as the edge effect decreased, the difference between the search times of inconspicuous and conspicuous target increased. The results are explained in terms of a model based upon the size of the 'mesh' of fixations used to cover the display. Two computer simulations confirmed that the size of this mesh and the magnitude of the edge effect are inextricably related. (Author)

**A82-12875** **Effects of extended practice on dual-task tracking performance.** D. L. Damos (New York, State University, Buffalo, NY), A. C. Bittner Jr., R. S. Kennedy, and M. M. Harbeson (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). *Human Factors,* vol. 23, Oct. 1981, p. 627-631. 7 refs.

A critical tracking task combination was examined for inclusion in an exotic environment test battery. Performance increased throughout 15 testing sessions despite the subjects' extensive prior tracking experience. However, consistent individual differences occurred only after Session 10. The implications of these results for research on exotic environments and timesharing abilities are discussed. (Author)

**A82-12951** † **Thermoregulatory responses to local convective and radiative cooling (Reaktsii termoreguliatsii na lokal'noe konvektivnoe i radiatsionnoe okhlazhdenie).** L. I. Danilova, N. K. Poleshchuk, and L. A. Fadeeva (Petrozavodskii Gosudarstvennyi Universitet, Petrozavodsk, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Sept. 1981, p. 1375-1380. 14 refs. In Russian.

The characterirtics of thermoregulatory responses to various degrees of local skin cooling induced by convection and radiation are investigated. The extents of physical and chemical thermoregulation were assessed by measurements of ear temperature and gas exchange, respectively, in unanaesthetized rabbits subjected to skin temperature reductions of 2-10 C on their dorsal trunk surfaces upon exposure to an ice-salt mixture of temperature -9-14 C or a jet of cooled air. Under both types of cooling stimuli, the level of both types of thermoregulatory response is found to be directly proportional to the cooling stimulus, however the response to radiative cooling is characterized by a slower onset, a longer latency period and a significantly lower ultimate level than the response to the same level of convective cooling. The distinction between the responses is observed to be more pronounced at skin temperature reductions of 7-10 C, indicating the greater danger of insufficient protective adaptation to greater degrees of radiative cooling. A.L.W.

**A82-12953** **Changes in the heat resistance of rats under various regimes of cold adaptation (Izmenenie teplovoi ustoichivosti krys pri razlichnykh rezhimakh kholodovoi adaptatsii).** Iu. I. Rossomakhin and S. A. Pevnyi (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Sept. 1981, p. 1381-1388. 15 refs. In Russian.

**A82-13110** **Articulated hands - Force control and kinematic issues.** J. K. Salisbury and J. J. Craig. In: Joint Automatic Control Conference, Charlottesville, VA, June 17-19, 1981, Proceedings. Volume 1. New York, American Institute of Chemical Engineers, 1981. 9 p. (TA-2C). 26 refs. Research supported by the California Institute of Technology; NSF Grant No. DAR-78-15914.

Kinematic and control issues are discussed in the context of an articulated multi-finger mechanical hand. Existence of hand designs with particular mobility properties is shown and a definition of accuracy points within manipulator workspace is given. An approach to optimization of the physical dimensions of the JPL-Stanford hand is given. Several architectures for position and force control of this multi-loop-mechanism are described including a way of dealing with the internal forces inherent in such systems. Preliminary results are shown for the joint torque subsystem used in the hand controller. (Author)

**A82-13175** **An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions.** I. Chatterjee, M. J. Hagmann, and O. P. Gandhi (Utah, University, Salt Lake City, UT). *IEEE Transactions on Microwave Theory and Techniques,* vol. MTT-29, Nov. 1981, p. 1235-1238. 9 refs. Grant No. NIH-ES-02304.

**A82-13226** **Hypoxic vasoconstriction and fluid filtration in pig lungs.** W. Mitzner and J. T. Sylvester (Johns Hopkins University, Baltimore, MD). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1065-1071. 37 refs. Grant No. NIH-HL-10342.

The effects of hypoxic pulmonary vasoconstriction on the fluid filtration rate in isolated blood-perfused pig lungs are investigated under various pulmonary blood flow conditions in a study of the mechanism of high-altitude pulmonary edema. Fluid filtration rates were measured as slow changes in lung weight in lungs inspiring gas mixtures of 200 and 50 mm Hg O2 partial pressures and perfused at blood flows from 0.5 to 2.5 l/min. Pulmonary arterial pressure-flow curves reveal that hypoxia caused a marked vasoconstriction at all blood flow rates, accompanied by an increased rate of fluid filtration. The results may be explained by a simple Starling resistor model of pulmonary circulation consisting of recruitable parallel channels, each with its own critical pressure and filtration coefficient which increase upon exposure to hypoxia. A.L.W.

**A82-13227** **Arm and leg intravascular temperatures of men during submaximal exercise.** L. H. Aulick, S. Robinson, and S. P. Tzankoff (Indiana University, Bloomington, IN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1092-1097. 24 refs.

**A82-13228** **Effect of exhaustive exercise on myocardial performance.** G. K. Grimditch, R. J. Barnard, and H. W. Duncan (California, University, Los Angeles, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1098-1102. 25 refs.

Possible changes in cardiac functional capacity in the intact heart following prolonged exhaustive exercise are investigated. Cardiac output, coronary blood flow, aortic blood pressure, left ventricular pressure, maximum rate of left ventricular pressure development and maximum rate of left ventricular pressure relaxation were measured in eight chronically instrumented adult mongrel dogs run at a constant work load to exhaustion signalled by the animals' refusal or inability to continue. All cardiovascular parameters, with the exception of stroke volume, are found to increase significantly during the transition from rest to steady-state exercise at about 75% of maximum heart rate. In the transition from steady state to exhaustion, only the maximum rates of left ventricular pressure development and relaxation are observed to increase significantly, while all other values exhibited no significant change. Similarly, no significant changes are observed in measurements of maximum cardiac parameters before and after exhaustion. Results indicate that cardiac function and hemodynamic parameters are not depressed at exhaustion in dogs despite observed ultrastructural changes. A.L.W.

**A82-13229** **Effects of rib cage or abdominal restriction on lung mechanics.** M. Scheidt, R. E. Hyatt, and K. Rehder (Mayo Clinic; Mayo Foundation, Rochester, MN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1115-1121. 14 refs. Grant No. NIH-HL-21584.

The effects of rib cage and abdominal restriction on transpulmonary pressure gradients and lung mechanics are compared. Measurements of transpulmonary pressure were performed simultaneously at three vertical sites in ten healthy male subjects studied under control conditions, rib cage restriction by a corset extended from the axillae to the lower ribs, predominant abdominal restriction by a water-filled rubber bladder secured by a corset extending from the lower ribs to the hips, and conditions making use of a volume equal to the restricted total lung capacity but without the restrictions (mimic phase). At the same lung volumes, abdominal restriction is found to decrease lung height and increase anteroposterior diameter compared with the control case, while rib cage restriction had the opposite effect. Maximum expiratory flow is observed to increase equally with both types of restriction, while the pleural pressure gradient became more uniform with abdominal restriction and the average static elastic recoil pressure increased equally. A significant correlation between total lung capacity reduction and recoil pressure increase is also obtained. Results indicate that changes in lung mechanics depend primarily on the amount of volume reduction rather than the type of deformation producing the reduction. A.L.W.

**A82-13230** **Impaired surfactant phospholipid metabolism in hyperoxic mouse lungs.** N. J. Gross (U.S. Veterans Administration Hospital, Hines, IL) and D. M. Smith (Loyola University, Maywood, IL). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1198-1203. 34 refs.

**A82-13231** **Steady-state vascular responses to graded hypoxia in isolated lungs of five species.** M. D. Peake, A. L. Harabin, N. J. Brennan, and J. T. Sylvester (Johns Hopkins Medical Institutions, Baltimore, MD). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Nov. 1981, p. 1214-1219. 31 refs. Research supported by the Peel Medical Research Trust and Wellcome Trust.

In the isolated pig lung exposed to graded levels of hypoxia, steady-state pulmonary vasomotor tone is maximum at an O2 tension, (PO2), of 50 Torr. Below 50-Torr decreases in PO2 cause steady-state tone to fall below this maximum. To determine whether this stimulus-response relation was peculiar to pigs, the steady-state relation between PO2 and vasomotor tone was measured in the isolated lungs of dogs, rabbits, cats, and ferrets, by using identical techniques in each species. Marked species differences were apparent in both the level of PO2 required to elicit responses and the amplitude of the responses. The ferret and the pig had the largest vasoconstrictor responses to hypoxia. No significant responses were obtained in the dog. The cat and rabbit were intermediate responders. In the ferret, cat, and rabbit, the stimulus-response relationship was biphasic, as in the pig. On the average, maximal constriction occurred at a PO2 of 25 Torr. When PO2 was lowered below 25 Torr, steady-state tone fell. Thus pulmonary vasodilation at low PO2 occurs in the isolated lungs of several species. (Author)

**A82-13232** **Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days.** G. Hayatdavoudi, J. J. O'Neil, B. E. Barry, B. A. Freeman, and J. D. Crapo (Duke University, Durham; U.S. Environmental Protection Agency, Research Triangle Park, NC). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Nov. 1981, p. 1220-1231. 34 refs. Grants No. NIH-HL-23806; No. NIH-HL-25044.

Lung injuries and toxic effects associated with the continuous exposure of rats to gas mixtures containing 60% O2 for a period of 7 days are investigated. Biochemical, morphometric and physiological studies were performed on the lungs of animals following a 7-day exposure and of control animals. It is found that exposure to 60% O2 for one week does not induce but rather reduces tolerance to 100% O2 relative to the controls, whereas exposure to 85% O2 prevents mortality in 100% O2 for over 96 hours. Activities of lung superoxide dismutases and glucose-6-phosphate dehydrogenase are observed to be unchanged following exposure to 60% O2, while a decrease in lung compliance is suggested by changes in total lung capacity and the pressure-volume curves of excised lungs. Morphometric analyses reveal a significant decrease in alveolar air volume and increase in the number of alveolar macrophages. The most significant lesions are found to involve the pulmonary vascular bed: decreases in the volume and thickness of the capillary endothelium, pericapillary fluid accumulations, and perivascular edema in the smaller vessels. Results indicate that exposure to O2 causes significant lung injury, primarily in the pulmonary capillary endothelium, without stimulating pathways leading to oxygen adaptation. A.L.W.

**A82-13233** **Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans.** R. S. Williams, R. S. Eden, M. E. Moll, R. M. Lester, and A. G. Wallace (Duke University Medical Center, Durham, NC). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Nov. 1981, p. 1232-1237. 29 refs. Research supported by the Henry T. Kaiser Family Foundation; Grants No. NIH-HL-16037; No. NIH-HL-24146.

The role of beta-adrenergic receptor sensitivity in the development of bradycardia observed at rest and during submaximal exercise as a result of physical training in humans is investigated. Heart-rate responses to graded doses of isoproterenol in seven elite marathon runners were compared with those of seven age-matched controls, and the effects of a 6-week period of intense physical training on lymphocyte beta-adrenergic receptors were monitored in 12 normal volunteers. No significant differences in the dose of isoproterenol required to increase heart rate by 25 beat/min is observed between the marathoners and the controls, either in the absence or presence of cholinergic blockade. Likewise, physical training is found to have no effect either on the number or affinity of lymphocyte beta-adrenergic receptors to binding of l-(H-3)dihydroalprenolol, despite evidence for training bradycardia. Results suggest that although reduced sinus-node responsiveness to isoproterenol during cholinergic blockade may be present in some highly trained individuals, altered neuronal input to the sinus node is usually a more important mechanism of training bradycardia. **A82-13236** **Hypoxic arousal in intact and carotid chemodenervated sleeping cats.** J. A. Neubauer, T. V. Santiago, and N. H. Edelman (Rutgers Medical School, Piscataway, NJ). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Nov. 1981, p. 1294-1299. 26 refs. Grant No. NIH-HL-16022.

The relative contributions of the carotid chemoreceptors and hyperpnea to arousal from sleep under hypoxic conditions are investigated in intact and chemodenervated cats. The arousal response to hypoxic hypoxia was first characterized in 14 intact sleep-deprived cats breathing a mixture of 5% O2 in N2 during periods of REM and slow-wave sleep (SWS), then compared with responses to carboxyhemoglobinemia induced by a 6% CO in 40% O2 breathing gas mixture and to the same hypoxic hypoxia following the bilateral surgical denervation of the carotid chemoreceptors. During a period of SWS unassociated with spontaneous arousals, arousal is found to occur at arterial oxygen saturations which are nearly the same in intact hypoxic and carboxyhemoglobinemic cats and carotid denervated cats, while arousal from REM sleep occurred after twice as much time and required a greater degree of hypoxemia. During both SWS and REM sleep, inhalation of hypoxic oxygen mixtures caused a substantial increase in ventilation in intact animals, while 6% CO did not. Results indicate that some mechanism other than one involving stimulation of the carotid bodies or increased ventilation is responsible for hypoxic arousal, and that the mechanism is stimulated by lowered O2 saturation. **A82-13289** * # **Veiling glare reduction methods compared for ophthalmic applications.** D. R. Buchele (NASA, Lewis Research Center, Cleveland, OH). *Applied Optics*, vol. 20, Nov. 1, 1981, p. 3787-3791. 11 refs.

Veiling glare in ocular viewing was simulated by viewing the retina of an eye model through a sheet of light-scattering material lit from the front. Four methods of glare reduction were compared, namely, optical scanning, polarized light, viewing and illumination paths either coaxial or intersecting at the object, and closed circuit TV. Photographs show the effect of these methods on visibility. Polarized light was required to eliminate light specularly reflected from the instrument optics. The greatest glare reduction was obtained when the first three methods were utilized together. Glare reduction using TV was limited by nonuniform distribution of scattered light over the image. (Author)

**A82-13422** **The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation.** S. C. P. Wong and B. J. Frost (Queen's University, Kingston, Ontario, Canada). *Perception and Psychophysics*, vol. 30, no. 3, Sept. 1981, p. 228-236. 31 refs. Research supported by the Natural Sciences and Engineering Research Council and Medical Research Council of Canada.

It has been hypothesized that the 25- to 30-sec latency observed in the onset of subjective rotation when a stationary subject is presented with a rotating visual field is the result of visual-vestibular conflict. The paper presents two experiments designed to test whether a reduction in visual-vestibular conflict would reduce the length of the latency period. In the first experiment, subjective rotation was induced by rotating a tall striped drum around an observer sitting in line with its axis of rotation, and vestibular stimulation was provided by the brief rotary acceleration of the observer's chair. Onset latencies were found to be significantly shortened by corroborating vestibular stimulation in the direction of perceived rotation, but to be unaffected by noncorroborating vestibular stimulation. In the second experiment, patients with unilateral (right labyrinth) Meniere's disease, which produces decreased vestibular sensitivity to rightward body rotation, were tested in the same rotating drum apparatus without additional chair rotation, and it was found that the latency to steady-state subjective rotation to the right was shorter than normal, while a level of subjective rotation to the left comparable to that of normal subjects was not reached during the 1-min testing period. Results thus confirm the hypothesis that onset latency of subjective rotation is probably a function of the visual-vestibular conflict. A.L.W.

**A82-13423** **The effects of binocular and motion-generated information on the perception of depth and height.** M. A. Hagen (Boston University, Boston, MA) and M. Teghtsoonian (Smith College, Northampton, MA). *Perception and Psychophysics*, vol. 30, no. 3, Sept. 1981, p. 257-265. 21 refs. Grants No. NIH-R01-MH-27947-0; No. NIH-1-R0-HD-10857.

The contributions of binocular vision and heat movements to the perception of distance and size in the presence of optical gradient information is investigated. Subjects were asked to make distance and size judgements by the adjustment of a metal tape for target triangles of various sizes placed within a 2.4-m alley with a black, white and gray checked floor and white walls. When judged distance is fitted as either a linear or a power function or target distance, it is found that binocular information is able to reproduce actual target distances than monocular vision, although consistently underestimating them, while head motion did not have any effect on perceived distance. Size judgements are not observed to be influenced by either binocular vision or head motion, consistently exceeding target heights by an average 30 to 40%. Analysis of judged size as a function of target distance reveals that the effect of distance is to increase size judgements for all conditions but monocular view with head motion. The distance judgements support the hypothesis that the binocular stimulus carries information that the monocular stimulus does not, while the size judgements suggest an independence of perceived size from perceived distance. A.L.W.

**A82-13550** † **The application of a combined passive orthostatic test in the flight medical examination (Primenenie kombinirovannoi passivnoi ortostaticheskoi proby vo vrachebno-letnoi ekspertize).** V. D. Vlasov and A. S. Nakhaev. *Voenno-Meditsinskii Zhurnal,* Sept. 1981, p. 49, 50. In Russian.

The potential applicability of a combined passive orthostatic test incorporating both orthostatic and antiorthostatic positions to the medical examination of pilots is assessed. Systolic, diastolic and pulse blood pressures and heart rate were measured in subjects undergoing a combined orthostatic test consisting of 5-min periods in the horizontal, antiorthostatic (-30 deg inclination) and orthostatic (+80 deg inclination) positions, or a control test involving 5 min in the horizontal and orthostatic positions. In the combined orthostatic test, a decrease in arterial systolic pressure, an increase in diastolic pressure, a decrease in pulse pressure and an increase in heart rate relative to those observed in the horizontal position were observed in the orthostatic position, while in the control tests, only an increase in heart rate was observed. The combined orthostatic test is thus seen to produce a more marked cardiovascular response and to merit further investigation as an alternative to the conventional passive orthostatic test used in pilot examination. A.L.W.

**A82-13636** † **The theory of radiometric contact measurements of the internal temperature of bodies (K teorii kontaktnykh radiometricheskikh izmerenii vnutrennei temperatury tel).** V. S. Troitskii (Nauchno-Issledovatel'skii Radiofizicheskii Institut, Gorki, USSR). *Radiofizika,* vol. 24, no. 9, 1981, p. 1054-1061. 6 refs. In Russian.

The paper considers the problem of determining the internal temperature of a body by measuring its thermal emission by a radiometer that is in contact with the surface of the body. A method is proposed for the absolute measurement of the internal temperature of dielectric bodies, including certain parts of the human body. An analysis is presented of radiometer input noise as a source of measurement errors. It is shown that the use of the thermodynamic-equilibrium principle of the radiometer input system and calibration with respect to two thermal-emission standards makes it possible to reduce the measurement error to one-tenth of a degree. **A82-13699** † **Artificial hypobiosis as a stable functional state of reduced vital activity (Iskusstvennyi gipobioz kak ustoichivoe funktsional'noe sostoianie snizhennoi zhiznedeiatel'nosti).** N. N. Timofeev (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Oct.-Dec. 1981, p. 52-76. 92 refs. In Russian.

The artificial induction of a state of hypobiosis corresponding to true hibernation in warm-blooded animals is discussed. Following a discussion of distinctions between natural and artificial levels of reduced vital activity, including superficial, deep and superdeep states of hypobiosis, attention is given to the induction of deep hypobiosis by the hibernation method, which consists of the administration of neuroplegic substances, and by the oxycapnic method, which involves the use of hypoxic and hypoxic-hypercapnic gas mixtures. Experimental results are considered which reveal the relationships characterizing the adjustment of the central and vegetative nervous systems, energy and carbohydrate-liquid metabolism, enzyme activity and tissue and organ morphologies to reduced levels of activity at lower temperatures. It is noted that the results demonstrate the feasibility of achieving reversible states of hypobiosis similar to those observed in heterothermic animals in warm-blooded animals. A.L.W.

**A82-13700** † **Oxygen deficiency in tissues and their blood supply (Defitsit kisloroda v tkaniakh i ikh krovosnabzhenie).** M. I. Gurevich, S. A. Bershtein, and A. I. Solov'ev (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Oct.-Dec. 1981, p. 77-98. 109 refs. In Russian.

The role of oxygen in regulating vascular tonus, which in turn determines tissue blood supply, is discussed based on an analysis of literature data. It is shown that the functioning of smooth muscle cells, which determine vascular tonus, primarily results from fluctuations in the level of intercellular metabolism and energy consumption in the provision of a specific level of force commensurate with that of striated muscle, and from aerobic metabolism in the synthesis of high-energy phosphates. Data demonstrating the significant reduction of the electrical, humoral and contractile activity of smooth vascular muscle and its responses to electrical, humoral and mechanical stimuli upon the lowering of the perfusate oxygenation level is presented, and it is concluded that these muscles exhibit reduced excitability under oxygen deficiency, possibly due to the reduction of energy supply to the electrogenic ion pump. The vascular smooth muscle cells thus act as chemoreceptors with built-in contractile mechanisms. A.L.W.

**A82-13825** # **On the place of organic life in the universe and the possibility of extraterrestrial life.** R. N. Butler (University College, Galway, Ireland). *Irish Astronomical Journal,* vol. 14, Mar.-June 1981, p. 177-188. 42 refs.

Assessments of the possibility of life elsewhere in the universe are thought to be unduly optimistic, representing a generalization of a single data point, the earth. Some of the assumptions involved in this post-Copernican philosophical view of widespread life in the universe are examined. It is pointed out that if it is to be justifiably assumed that life is a universally occurring process rather than a universally possible process, which has occurred rarely, it must be required (a) that the process be understood; (b) that the chance element involved be quantified; and (c) that the limits of favorable conditions be identified and shown to be reasonably widespread. The role of chance and probability in the development of earthlife, however, cannot be accurately quantified and probably will never even be fully known. C.R.

**A82-13839** **A working hypothesis on the interdependent genesis of nucleotide bases, protein amino acids, and primitive genetic code.** F. Egami (Mitsubishi-Kasei Institute of Life Sciences, Machida, Tokyo, Japan). *Origins of Life,* vol. 11, Sept. 1981, p. 197-202. 22 refs.

**A82-13840** **Are there structural analogies between amino acids and nucleic acids.** L. B. Hendry, E. D. Bransome, Jr. (Georgia, Medical College, Augusta, GA), and M. Petersheim (Rochester, University, Rochester, NY). *Origins of Life,* vol. 11, Sept. 1981, p. 203-221. 55 refs.

Space-filling molecular models have been used to examine structural analogies between amino acids and nucleic acids. The three-dimensional structures of amino acid R groups appear to be stereochemically related to cavities formed by removal of single bases in double helical nucleic acids. The common L amino acids may thus be complementary to their codons. (Author)

**A82-13841** **Molecular complexes of amino acids with porphyrins as possible precursors of pigment-protein systems.** M. P. Kolesnikov, N. I. Voronova, and I. A. Egorov (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Origins of Life,* vol. 11, Sept. 1981, p. 223-231. 20 refs.

The present communication gives experimental results of the studies of catalytic and photochemical properties of peptide-like compounds containing metalloporphyrins (hemoproteinoids and molecular complexes obtained through adsorption of prophyrins and amino acids on volcanic ash). The data suggest that molecular complexes of amino acids with porphyrins could have evolved in the course of chemical evolution and were intermediated between abiogenically synthesized molecules of amino acids and porphyrins and pigment-protein systems of living organisms. **A82-13842** **Constant AMP synthesis in aqueous solution by electric discharges.** Y. Yamagata, T. Mohri, M. Yamakoshi, and K. Inomata (Kanazawa University, Kanazawa, Japan). *Origins of Life,* vol. 11, Sept. 1981, p. 233-236.

An electric discharge was made through a gas mixture of $N_2$ (7 cm Hg), $H_2$ (14 cm Hg) and $CO_2$ (14 cm Hg) over an aqueous solution (100 ml, pH 7.6) of adenosine (0.02 M) and phosphate (0.2 M) in a 5 liter vessel simulating primitive earth conditions. AMP was produced at a constant rate in the solution, and the yield reached about 2% in two months. (Author)

**A82-13843 *** **Effect of polynucleotides on the dimerization of glycine.** H. Mizutani and C. Ponnamperuma (Maryland, University, College Park, MD). *Origins of Life,* vol. 11, Sept. 1981, p. 237-241. 9 refs. Grant No. NGR-21-002-317.

Results from experiments to determine the effect of polynucleotides on abiological formation of peptide bonds are reported. The reaction between glycine molecules in an aqueous phase in the presence of a condensing agent was chosen as a model, with polyphosphates being selected as the condensing agent for biologically relevant peptide formation. Four types of polynucleotides were used: polygluanic acid (G), polyuridic acid (U), polyadenylic acid (A), and polycytidylic acid (C); the effects of small anions, acetate, chloride, and phosphate, were also studied. Procedures are given, including concentrations, pH, and incubation time, and the type of amino acid analyzer. The diglycine yields were, in order of most to least: G, C, A, U, and are diagrammed as a function of time; rate of formation followed the same order of magnitude as the final yields. Anion presence displayed no discernible effect. The results are taken to indicate that polynucleotides do have an effect on the formation of peptide bonds, an effect significant in the understanding of chemical evolution. M.S.K.

**A82-13844** **Primordial transport of sugars and amino acids via Schiff bases.** W. Stillwell and A. Rau (Indiana University; Purdue University, Indianapolis, IN). *Origins of Life,* vol. 11, Sept. 1981, p. 243-254. 58 refs.

Experimental support is given for a model concerning the origin of a primordial transport system. The model is based on the facilitated diffusion of amino acids stimulated by aliphatic aldehyde carriers and sugars stimulated by aliphatic amine carriers. The lipid-soluble diffusing species is the Schiff base. The possible role of this simple transport system in the origin of an early protocell is discussed. (Author)

**A82-13845** **Chirality of electrons from beta-decay and the left-handed asymmetry of proteins.** A. K. Mann and H. Primakoff (Pennsylvania, University, Philadelphia, PA). *Origins of Life,* vol. 11, Sept. 1981, p. 255-265. 10 refs. NSF Grant No. PHY-78-11608; Contract No. EY-76-C-02-3071.

A simplified mathematical model of the origin of the left-handed asymmetry of proteins in living matter is presented. The model is based on the hypothesis of Vester and Ulbricht (1957) that the chirality of (left-handed) electrons from naturally beta-active elements, e.g. C-14, K-40, etc., was the specific source of the asymmetry; it requires for its application data on the interaction of electrons having nonzero chirality with racemic mixtures of amino acids. This interaction is here treated theoretically in an order-of-magnitude calculation. The analysis yields a very approximate value of the induced steady-state asymmetry in the amino acids at the beginning of protein synthesis and indicates that this asymmetry, though small, may have been sufficient to account for the dominant left-handedness of proteins now observed. (Author)

**A82-13846 *** **Chemical evolution and the origin of life - Bibliography supplement 1979.** L. G. Pleasant (George Washington University, Medical Center, Washington, DC) and C. Ponnamperuma (Maryland, University, College Park, MD). *Origins of Life,* vol. 11, Sept. 1981, p. 273-288. 340 refs. Contract No. NASw-3165; Grant No. NGR-21-002-317.

**A82-13890** # **A self-contained, man-borne biomedical instrumentation system in the flight testing of naval weapons systems.** D. W. Call, D. M. Kelly, and D. G. Robertson (U.S. Navy, Pacific Missile Test Center, Point Mugu, CA). *AIAA, SETP, SFTE, SAE, ITEA, and IEEE, Flight Testing Conference, 1st, Las Vegas, NV, Nov. 11-13, 1981, AIAA Paper 81-2403.* 5 p. 8 refs. Navy-supported research.

Noting that the performance capabilities of some existing and prototype military aircraft exceed human physical tolerances and reaction times, a self-contained, man-borne, in-flight physiological data acquisition system (IFPDAS) was developed to evaluate airborne man-machine systems. A short history of in-flight monitoring of fighter pilots is provided, tracing the expansion of the instrumentation. IFPDAS has capabilities of monitoring physiological and environmental data for recording on cassette tape; ECG, expiratory flow, $O_2$ inhalation/exhalation, g-force, vertical acceleration, cabin pressure, voice information, and a time code are included. Sensors are contained within the pilots' survival vests, and tests have been conducted on board A-4, F-4, F-14, C-130, and T-38 aircraft. Breathing levels during landing were found to surpass breathing apparatus design parameters. IFPDAS is equipped with 12 channels analog and 32 digital, which are multiplexed on four track magnetic tape for up to four continuous hours. D.H.K.

**A82-13914** # **System to measure head motion during parachute opening shock.** T. J. Bozack and J. E. Doerr (U.S. Naval Weapons Center, China Lake, CA). *AIAA, SETP, SFTE, SAE, ITEA, and IEEE, Flight Testing Conference, 1st, Las Vegas, NV, Nov. 11-13, 1981, AIAA Paper 81-2517.* 10 p. 12 refs.

Human tolerance limits to the forces imposed during parachute opening are not well defined. Part of the effort to develop realistic human tolerance limits involves measuring the response of the human, head-neck system to the forces imposed during parachute opening. To accomplish this, human subjects are being instrumented to directly measure the displacement of the head with respect to the upper torso during parachute opening. A small high speed 16-mm camera is mounted on a test jumper and fiber-optic image guides connect the camera to a pair of stereo lenses. This system photographs head motion during parachute opening. A mathematical description of motion is derived from an analysis of the stereo film. (Author)

**A82-14197 *** **Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment.** C. E. Folsome, A. Brittain (Hawaii, University, Honolulu, HI), A. Smith, and S. Chang (NASA, Ames Research Center, Life Sciences Div., Moffett Field, CA). *Nature,* vol. 294, Nov. 5, 1981, p. 64, 65. 15 refs. Research supported by the University of Hawaii, Grant No. NGR-12-001-109.

Whether abiological organic compounds can be formed from the interactions of energy sources with nitrogen, oxidized carbon and water is held to be of importance in geochemical models of the primordial earth atmosphere. It is reported that experiments using quenched spark discharges through molecular nitrogen on aqueous suspensions of $CaCO_3$ and other reactants to simulate the hydrosphere/atmosphere interface yield hydrazine and carbohydrazine in significant but low yields. Such reactions in primitive aquatic environments may have supplied a pathway for chemical evolution and the origin of life, on a primitive earth in which fully oxidized states of carbon were available for the primary synthesis of organic matter. **A82-14274** **Work and rest on nuclear submarines.** A. N. Beare, K. R. Bondi (U.S. Naval Material Command, Naval Submarine Medical Research Laboratory, Groton, CT), R. J. Biersner (U.S. Naval Medical Research and Development Command, Bethesda, MD), and P. Naitoh (U.S. Navy, Naval Health Research Center, San Diego, CA). *Ergonomics,* vol. 24, Aug. 1981, p. 593-610. 30 refs.

Hours of work and sleep were recorded in daily activity logs by 46 enlisted men on two fleet ballistic missile submarines during routine patrols. Total working time (watch standing, nonwatch work, and study) averaged 12 hours a day. Daily sleep time averaged 8.4 hours a day on one ship and 7.6 on the other. Sleep was mildly fragmented in that the men averaged 1.3 sleep episodes, of somewhat less than 6 hours duration, in 24 hours. Thirty of the men were standing watch on a 6-hours-on - 12-hours-off rotation which effectively imposed an 18-hour cycle on their activities. The 6-on - 12-off watch schedule appeared to result in less sleep fragmentation than the traditional 4-on - 8-off schedule employed on other naval ships. Questions in the logs were used to assess subjective sleep quality and sleepiness. Sleep quality on patrol was not as good as in a post-patrol period, but the difference between on- and off-patrol sleep quality was small. (Author)

**A82-14275 Diurnal variation in vigilance efficiency.** A. Craig, W. P. Colquhoun (Medical Research Council, Laboratory of Experimental Psychology, Brighton, Sussex, England), and R. T. Wilkinson (Medical Research Council, Psychophysiology Section, Cambridge, England). *Ergonomics,* vol. 24, Aug. 1981, p. 641-651. 24 refs.

Five sets of data are presented, obtained from studies that examined the influence of time of day on auditory vigilance performance during the normal waking day. Although both hits and false alarms exhibited a fairly consistent tendency to be lowest at the first test time in the morning, 1 or 2 hours after awakening from sleep, and to increase in parallel thereafter, the magnitude of change was modest and the time-of-day effect was statistically reliable in only a minority of the analyses. The slight changes that did occur seemed largely attributable to shifts in response criterion rather than to altered levels of signal detectability. In admonitory contrast with these findings, which have reassuring implications for vigilance efficiency during normal day-work, additional evidence is presented indicating that detectability levels may alter within the daylight span when the normal sleep-work-rest routine is disturbed. (Author)

**A82-14347 * Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves.** B. B. Westerdahl and N. E. Gary (California, University, Davis, CA). *Space Solar Power Review,* vol. 2, no. 3, 1981, p. 283-295. 8 refs. Research supported by the U.S. Department of Energy; Contract No. NAS2-9539.

A honey bee colony (Apis mellifera L.) was exposed 28 days to 2.45 GHz continuous wave microwaves at a power density (1 mW/sq cm) expected to be associated with rectennae in the solar power satellite power transmission system. Differences found between the control and microwave-treated colonies were not large, and were in the range of normal variation among similar colonies. Thus, there is an indication that microwave treatment had little, if any, effect on (1) flight and pollen foraging activity, (2) maintenance of internal colony temperature, (3) brood rearing activity, (4) food collection and storage, (5) colony weight, and (6) adult populations. Additional experiments are necessary before firm conclusions can be made. (Author)

**A82-14677 SADT/SAINT simulation technique.** R. F. Bachert (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH), K. H. Evers, and P. R. Santucci (SofTech, Inc., Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 1. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 4-9. 7 refs.

Structural Analysis and Design Technique (SADT) is a structured technique for doing functional analysis and system design. System Analysis of Integrated Networks of Tasks (SAINT) is a computer simulation tool currently used by the USAF for modeling and analyzing large-scale man-machine systems. By linking SADT with SAINT, a system can be defined in general terms, decomposed to the necessary level of detail, translated into SAINT nomenclature, and entered into the SAINT program. SADT/SAINT provides the capability of translating from one graphic technique to another, as well as from a static model to a dynamic one. A brief explanation is given as to how a SADT activity diagram communicates a system description, how a SAINT model is represented, and how to transition from SADT to SAINT. J.F.

In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 1. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 191-196. 10 refs.

An empirical approach has been developed for the validation of human factors engineering design aspects of major B-52 modernization programs which may be applicable to other systems. The Strategic Avionics Crewstation Design Evaluation Facility (SACDEF) attempts to duplicate the crew workload imposed by the anticipated mission using relatively inexperienced operators to help identify system or design weaknesses. SACDEF employs real-time minicomputer simulations of system mechanization at each crew station. The SACDEF simulation approach is considered applicable in all stages of the life cycle of the system from concept formulation through full-scale development and production to modification/modernization, with a shift in emphasis from the support of acquisition activities to the support of logistics activities as the system progresses. Benefits of validation by the system user include a cross check on contractor design with the identification of problems by user, rather than contractor, personnel, and the prevention of unforeseen operational deficiencies difficult to correct. S.C.S.

**A82-14746 Digital spirometer for automatic pulmonary function.** D. E. Turner, J. S. Petrofsky, and R. M. Glaser (Wright State University; U.S. Veterans Administration Medical Center, Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 584-588. Research supported by the U.S. Veterans Administration and U.S. Air Force.

The purpose of this project was to develop a digital spirometer for automatic pulmonary function. Advantages of this device are that it is: small in size, light weight, portable (battery powered), immune to exercise movement and high G forces, and relatively inexpensive. It can compute and display inspiratory or expiratory pulmonary ventilation over 30 or 60 sec time intervals, respiratory rate and gas temperature over the normal physiological ranges. The system incorporates a commercial turbine flow transducer (KLE 511) and readily available electronic components. A schematic diagram of the electronics package is provided, as is a functional description of the circuit. Accuracy of this instrument was found to be excellent with both constant and pulsatile flows, at various flow rates. (Author)

**A82-14903 Cardiovascular responses to mixed static and dynamic exercise.** P. V. Fiore, J. S. Petrofsky (Wright State University, Dayton, OH), and R. M. Glaser (Wright State University; U.S. Veterans Administration Medical Center, Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics

Engineers, Inc., 1981, p. 1066-1071. 11 refs. Research supported by the U.S. Veterans Administration and U.S. Air Force.

The purpose of this study was to evaluate the effect of dynamic exercise on the cardiovascular responses during subsequent fatiguing isometric exercise. College-age males performed a series of three fatiguing isometric contractions at a tension of 40% of their maximal voluntary strength of their quadriceps muscles. The period between the contractions was either one, three, or 20 minutes. During this period, subjects either rested (control), pedalled a bicycle ergometer at a load of 0 kp, or at a load which demanded 50% of their maximal oxygen uptake (VO2 max). Only one combination of experiments was performed by a subject in a 24-hour period. Cardiovascular responses during subsequent static exercise returned to control values following intervals of rest. Pedalling at a load of 0 kp had little effect on altering the cardiovascular response compared to resting control intervals. In contrast dynamic exercise at 50% VO2 max altered the cardiovascular response markedly to subsequent isometric exercise. (Author)

A82-14804 **Steady and unsteady pressure-flow relations in bronchial tree models.** D. B. Reynolds, R. M. Glaser (Wright State University, Dayton, OH), and J.-S. Lee (Virginia, University, Medical Center, Charlottesville, VA). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 1072-1078. 20 refs. Research supported by the U.S. Veterans Administration; Grant No. NIH-HL-16812.

Few physical model studies of expiratory flow-pressure relations in the bronchial tree have been reported. The present study investigates pressure drop across a model of a canine tracheobronchial tree during steady expiration and unsteady respiration simulating inspiration and expiration. Water was used to amplify pressure drops and flows produced tracheal Reynolds numbers in a physiologically important range between 1000 and 10,000. The results could be described by two distinct power laws, presumably corresponding to laminar and turbulent flow regimes. However, a single equation described the data over the entire range of Reynolds numbers. Unsteady flow results indicated that when the Strouhal number is less than 0.001, unsteady flow behaves nearly steady. (Author)

A82-14805 # **A study of performance effects under G stress.** D. W. Repperger, D. B. Rogers, and J. W. Frazier (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 1079-1085.

Several variables must be considered in order to measure human tracking performance changes under G stress. First it is necessary to establish a uniform set of tracking tasks which are sensitive to the stress-nonstress condition. In this paper, five tasks were chosen to delineate different levels of tracking difficulty. The five tasks chosen were required to satisfy the criteria of being zero mean, constant variance, and sum of sines. It was also desired to observe, from an experimental study, human performance changes between each task number in the static or stress mode. In comparing the static to the stress mode it was hoped to observe a performance change across the experimental conditions stress-nonstress for each task number. This paper reports the results of this experiment and how these performance tasks can be used to study stress effects on pilots exposed to G acceleration. (Author)

A82-14806 **Comparison of impedance ventricular function indices with systolic time intervals.** M. A. Bassett Frey, B. M. Doerr, B. L. Mann, and D. S. Miles (Wright State University, Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 1086-1093. 31 refs. Research supported by the American Heart Association.

The purposes of this study were to noninvasively assess differences in central hemodynamics associated with supine, seated, and standing postures and to examine the relationship between ventricular function (VF) indices obtained by the established method of systolic time interval (STI) analysis and by impedance cardiography (IC). The electrocardiogram, phonocardiogram, and impedance cardiogram were recorded from seven women in three postures. Heart rate, stroke volume (SV) and cardiac output (CO) monitored by IC were significantly changed with posture. All STI VF variables responded to posture; however, IC VF variables were not significantly altered by posture. IC and STI VF variables were strongly correlated in all three postures. IC should provide a safe, atraumatic, and reliable method of monitoring VF, SV, and CO for aerospace physiology. (Author)

A82-14837 **Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators.** R. J. Spicuzza and M. S. Crabtree (Systems Research Laboratories, Inc., Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 1338-1341. 10 refs. Navy-supported research.

A low-cost, microprocessor-controlled device containing an item recognition task has been designed for assessing workload in laboratories, simulators and aboard airborne flight testing programs. The hardware includes a real-time controller and data collection device, software, and a ground-based data analysis package. A chassis has been constructed such that it is small enough to be portable, and also fits into the nose of the NT-33A aircraft. In order to create a cassette tape containing the operating program and stimulus parameters, a microcomputer containing two floppy disks drives mainframe, CRT terminal, printer, digital tape recorder, and the disk operating system. S.C.S.

A82-14839 **Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems.** M. S. Crabtree and R. J. Spicuzza (Systems Research Laboratories, Inc., Dayton, OH). In: NAECON 1981; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 19-21, 1981. Volume 3. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 1349-1352.

The use of radio communications activity as a noninterfacing, imbedded secondary task for the objective assessment of varying operator workload has been examined. The basic classes of tasks studied are waypoint passage, jammed communications, threat report, and identification. The simulator system was designed around a PET MDL 2000 computer interfaced to radio switches by a 16-channel multiplexer and A/D converter. Verbal responses and switch-changing data recorded on tape show that the simulation facility provides an excellent device for dual-task performance research concerned with evaluating the sensitivity of radio tasks to changes in operator workload. S.C.S.

A82-14957 **The physiological response of anthropometrically selected female military personnel to the test parachuting environment.** J. H. Gilbert, H. T. Pheeny, J. E. Doerr, and G. F. LaMora (U.S. Naval Weapons Center, Parachute Engineering Div., China Lake, CA). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 68-75. 12 refs.

Female Naval test parachutists were biomedically monitored to define the stresses encountered during aircraft exit and parachute descent. The subjects were instrumented for pulse rate by an ECG, for respiratory rate, eye movement, and g loads during opening shock; data was telemetered by an FM/FM data acquisition system to a computerized ground station. Nine jumps have been recorded for two subjects, allowing the appearance of any gradients from novice to experienced parachutist physiological responses to become apparent. Results for the females were equivalent to data from tests with males; heart rate, respiratory rate, and lateral eye movements all show peaks in a bimodal response just before parachute deployment and just after landing. Female heart rates did not, however, display adaptive decreases with experience, although the sample is judged to be of insufficient size to be conclusive. M.S.K.

**A82-14959** **An investigation of ripcord pull force capability of male and female skydivers for ripcords located on the left main lift web at chest level.** M. Johnston and J. Sherman (Jump Shack, Inc., Farmington Hills, MI). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 80-83.

A study of the actual ripcord pulling capability of trained skydivers, both male and female and also of untrained individuals has been conducted to either confirm or deny two previously conducted studies. One previous study concerned only males, the other concerned only females. The results of this study indicate that there is no need to revise down the FAA TSO requirements for ripcord pull force limits for back mounted parachutes. (Author)

**A82-14962** **In-flight physiological monitoring of tactical jet aircrewmen.** D. W. Call, D. G. Robertson, D. M. Kelly (U.S. Navy, Pacific Missile Test Center, Point Mugu, CA), and J. T. Merrifield (USAF, School of Aerospace Medicine, Brooks AFB, TX). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 97-100. 6 refs.

The U.S. Navy and the U.S. Air Force have been involved in developing and employing techniques to obtain in-flight aeromedical data for several years. These joint efforts have been both to acquire physiological data as a research tool in the test and evaluation of aircrew equipment and to carefully define the pilot's response to the multi-stress environment of tactical jet flying. This paper traces the chronology of this development and describes in detail the current in-flight physiological data acquisition system (IFPDAS) used by both services. The IFPDAS recorder is completely self-contained and can be worn by any aircrewmember. The system can monitor, condition and record up to 12 analog and 32 digital channels of physiologic and environmental data on a four track magnetic tape cassette. Data analysis and display are provided by a ground based data reproducer, portable field data processor and teleprinter. (Author)

**A82-14964** **Factors affecting seat-man dynamics during emergency egress.** G. D. Frisch (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 110-115. 8 refs.

An analysis comprising mathematical simulation and dummy and human tests to determine the adequacy of a crew station configuration is presented. Crew stations were ranked according to the probability of physical interference between limbs and crew station structure during ejection. A Euclidean aircraft coordinate system was devised to identify anthropometric anatomical reference points in relation to position in the cockpit and along the ejection vector. Acceleration at the knee was found to determine lower leg and foot responses, while dummy ejections revealed foot-instrument panel contact at 175 msec into ejection due to inward rolling of the thigh. Knee location and thigh height were determined to be critical parameters affecting the chances of instrument panel collisions during ejection, along with full rudder pedal heel cups and height of the feet above the floor pan. M.S.K.

**A82-14971** **Holographic laser eye protection.** G. Twine Chisum (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 180-182.

Development of a method of protecting the eyes of military personnel has been pursued for a number of years. The devices developed have marginal acceptability, particularly for aircrew personnel. Efforts under way to develop a holographic diffraction grating protection device indicate that such a device is feasible and that the requirements of high transmittance, multiple wavelength rejection and aircrew helmet visor configuration can be met. A program has been established to develop an operational device. The program anticipates a device which can be evaluated operationally within two years. (Author)

**A82-14973** **U.S. Navy molecular sieve on-board oxygen generation system - An update.** M. J. Lamb (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA). In: Survival and Flight Equipment Association, Annual Symposium, 18th, San Diego, CA, October 12-16, 1980, Proceedings. Canoga Park, CA, Survival and Flight Equipment Association, 1981, p. 192-195.

An on-board oxygen generator (OBOG) system for operation on Navy tactical aircraft is described. The molecular sieve OBOG has three major components: oxygen concentrator, breathing regulator, and performance monitor. The system filters all gases from the engine bleed air except for argon and oxygen, which are concentrated into a 5% and 95% mix, respectively. The concentrator measures the mass flow rate and the regulator provides the oxygen concentrate on demand. A polarographic partial pressure sensor, and electronics module, and a compensating aneroid maintain the constant absolute pressure at a level equivalent to 28,000 ft in the sensor cavity. Successful tests are enumerated and future operational evaluations are outlined. The OBOG system eliminates the need for LOX generation equipment on board naval ships, and allows placement of V/STOL aircraft on nonaviation sea craft. M.S.K.

**A82-15280** **Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control.** J. R. Lackner (Brandeis University, Waltham, MA). *Acta Astronautica,* vol. 8, Aug. 1981, p. 825-830. 21 refs.

Human spatial orientation and oculomotor control are under multimodal influence. It is not possible in the normal animal to stimulate differentially the vestibular receptors without activating other receptor systems whose activity may have a profound influence on postural control and experienced orientation. Many patterns of behavior and response that have been attributed solely to vestibular function are actually dependent wholly or in part on touch, kinesthetic, and proprioceptive stimulation. (Author)

**A82-15358** * **A single-channel model does not predict visibility of asynchronous gratings.** A. B. Watson (NASA, Ames Research Center, Moffett Field; Stanford University, Stanford, CA). *Vision Research,* vol. 21, no. 12, 1981, p. 1799, 1800.

A single channel model is shown to lack the capability to predict the visibility of asynchronous compound gratings. A constant Beta was assumed, based on Monte-Carlo simulations, and used to show that an SE of 6.73 (Limb, 1981) lies outside of an acceptable confidence interval. Potential imbalances between two eyes cannot be as large as 1.5 dB, which can only affect one eye, or one region of a retina. An average unbalance of 0.53 dB (SE = 0.12) employed in experiments to measure thresholds was compensated for by estimated threshold reductions. Trial-to-trial variability was included in the single channel model, as were considerations of retinal inhomogeneity. Temporal sensitivity for 2 and 4 c/deg grating patches were measured, and the amplitude response of a single channel at the two spatial frequencies were obtained. Threshold reductions with a Beta of 3.1 are then determined to not be significant enough to warrant adoption of the single channel model predictions. M.S.K.

**A82-15391** **Automatic planning of manipulator transfer movements.** T. Lozano-Perez (MIT, Cambridge, MA). *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-11, Oct. 1981, p. 681-698. 51 refs. Contract No. N00014-77-C-0389.

The class of problems that involve finding where to place or how to move a solid object in the presence of obstacles is discussed. The solution to this class of problems is essential to the automatic planning of manipulator transfer movements, i.e., the motions to grasp a part and place it at some destination. For example, planning transfer movements requires the ability to plan paths for the manipulator that avoid collisions with objects in the workspace and the ability to choose safe grasp points on objects. The approach to these problems described here is based on a method of computing an explicit representation of the manipulator configurations that would bring about a collision. (Author)

**A82-15475** **The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat.** F. Grehn (University Eye Clinic, Freiburg im Breisgau, West Germany). (Bundesministerium für Forschung und Technologie, Municipality of Vienna, Vienna Academy of Medicine for Postgraduate Studies, and Vienna Tourist Board, Proceedings of the Symposium on Information Processing in the Retina, Vienna, Austria, July 10-12, 1980.) *Vision Research,* vol. 21, no. 11, 1981, p. 1697-1701. 19 refs. Deutsche Forschungsgemeinschaft Contracts No. GR-161; No. GR-538; No. SFB-70.

The effects of a conduction blockade of the nerve fiber layer in the eye of a cat during transient intraocular pressure (IOP) increases and stages of hypoxia were studied. The experiment comprised 14 cats as subjects, anesthetized and subjected to varying levels of IOP induced by a manometer or hydrostatically by a Ringer solution reservoir connected to a cannula in the anterior eye chamber; hypoxia was induced by altering artificial respiration or by providing hypoxic N2/O2 mixtures. The optic tract ipsilateral to the eye was stimulated electrically to elicit antidromic field potentials of the nerve fiber layer. The impulses in unmyelinated axons during acute IOP elevation were found to conduct longer than synaptic signals transmitted in the retina. Transfer of the results to moderate IOP levels caused by glaucoma are not considered to be justified at present. M.S.K.

**A82-15515** # **Experimental studies on the survival capacity in the sealed environment. III.** H. Fujikvara (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, Mar. 1981, p. 1-12. 12 refs. In Japanese, with abstract in English.

The effects of hypoxia, cold stress, and lethal oxygen and CO2 concentrations in sealed environments on survival time are evaluated for 57 Sprague-Dawley strain male rats at 4, 7, 9, and 12 weeks of age. At 12 weeks the mean survival time is 4.7 + or - 0.7 hours in a 10 liter chamber ranging from about 2-6 C, and at 4 weeks of age the mean survival time is 10.8 + or - 1.7 hours in a 10 liter chamber ranging from about 2-8 C. The mean lethal oxygen concentration is 4.8 + or - 0.2% for all age groups, while the CO2 mean lethal concentration is 13.2 + or - 0.3% for all age groups. Results are also compared with theoretical values showing fair agreement. D.L.G.

**A82-15516** # **Development of a secondary task method for measuring operator workload. V - Measurement of pilot workload during take off and landing by C-1 jet carrier.** Y. Nagasawa, S. Aramaki, and N. Utsuki (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, Mar. 1981, p. 13-27. 20 refs. In Japanese, with abstract in English.

An in-flight study of pilot workload during takeoff and landing of a C-1 JASDF jet carrier was conducted. Normal take-off and landing patterns were arbitrarily divided into ten flying segments, and a visual-auditory discriminative secondary task was added, which consisted of a lamp box with red and green lights mounted on the instrument panel. The subject was required to detect only those signals synchronized with red light and a 1200 Hz tone. No remarkable changes in flying performance were noted, although significant correlations were found between miss rate of secondary task and the task time stress index. Potential workload was derived by means of a time series analysis involving task flow and secondary task performance. D.L.G.

**A82-15517** # **Performance changes during exposure to +Gz stress.** Y. Nagasawa, M. Iwane, M. Ono, A. Onozawa, S. Ogata, and C. Sekiguchi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, Mar. 1981, p. 29-43. 23 refs. In Japanese, with abstract in English.

The relationship between performance and physiological responses was studied to develop an evaluating method of G tolerance in terms of changes in heart rate, vertical visual field, and tracking performance. Twelve subjects were exposed to 2, 3, 4, and 5 +Gz stress of 60 second durations in an AML human centrifuge, and the mean heart rate was found to elevate with increasing G level, especially above 3 G. Vertical visual field was constricted with increasing G levels, and mean tracking error appreciated with increasing G levels. Frequency characteristics of tracking performance were also analyzed, and a decrease in gain ratio with an increase in phasal difference of performance was observed during exposure to G stress. D.L.G.

**A82-15518** # **Aircraft noise and speech communication interference in JASDF air traffic control room.** O. Fujiwara and N. Utsuki (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, June 1981, p. 57-72. 9 refs. In Japanese, with abstract in English.

The aircraft-induced environmental noise in control rooms of eleven JASDF air traffic control towers was estimated by obtaining noise levels, frequency spectra, speech signal-to-noise ratios, speech interference levels (SIL), and attenuation abilities of the structures. Noise conditions of the ATC rooms were classified onto five grades ranging from excellent to bad, according to the peak noise level and SIL. No ATC rooms could be classified as excellent or good, three rooms were estimated as fair, and five were judged to be below poor standards. D.L.G.

**A82-15519** # **Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner.** K. Tagami, W. Ogawa, K. Shimizu, N. Kawabata, and F. Tomita (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, June 1981, p. 73-83. 11 refs. In Japanese, with abstract in English.

Two types of impact protection devices for flight helmets were tested in hot environments under varying thermal conditions: a polystyrene liner and a nylon sling. Differences of helmet shell, liner, and head skin temperatures were found to be significantly higher for the polystyrene liner helmet than for the nylon sling helmet, whereas the oral temperature of the former helmet did not rise significantly. E.J.

**A82-15520** # **A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination.** M. Okaue and H. Aruga (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, June 1981, p. 85-96. 6 refs. In Japanese, with abstract in English.

Flight training students who had eliminated themselves from the training program in JASDF were studied to investigate factors contributing to elimination in terms of causes, training phases of student attrition, ratings in the flight aptitude test (APT), and aircraft accidents concerning students. Most students who quit due to fear of flight or loss of confidence were rated low on the APT flight test, and mean scores of items in the anxiety scale were significantly higher in those students who quit due to too much pressure, fear of flight, or personality traits not suitable for pilots. Accidents appeared to have little statistical significance. D.L.G.

**A82-15521 #** **Trouble shooting pattern of emergency through instruments by jet-pilots. II.** Z. Katoh, T. Shimizu, Y. Kakimoto, H. Iwamoto, and T. Nakabayashi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, June 1981, p. 97-112. 6 refs. In Japanese, with abstract in English.

A questionnaire survey was conducted among 119 JASDF jet pilots to obtain data on emergency experience and educational training on emergency aircraft. Results showed that 71% of all pilots had at one time or another experienced some sort of trouble, and most had their first indication of such trouble when abnormal acceleration or deceleration was sensed. This suggests that a high priority information source is body-sense oriented. No significant individual difference or aircraft difference was noted when obtaining sequences of necessary information for diagnosing four types of randomly selected problems. D.L.G.

**A82-15681** **An approach to algorithms for processing data from the visual sensor of an integrated robot (Otnosno edin podkhod za algoritmichno osiguriavane na videosenzor za integralen robot).** G. E. Kandilarov (B'lgarska Akademiia na Naukite, Institut po Tekhnicheska Kibernetika i Robotika, Sofia, Bulgaria) and K. B. Kr'stev (B'lgarska Akademiia na Naukite, Institut po Khidrologiia i Meteorologiia, Sofia, Bulgaria). *Problemi na Tekhnicheskata Kibernetika i Robotikata,* no. 12, 1981, p. 75-83. 6 refs. In Bulgarian.

The paper describes methods for the automated processing of visual information used for the control of third-generation robots. Particular attention is given to a method for measuring a metric parameter that plays an important role in scene analysis: namely the longest span of the contour of the image obtained from a TV sensor. The methodological error is investigated, and the possibility of taking this error into account when making measurements is considered. It is concluded that the results could be used successfully in the design of visual sensors for integrated robots and control systems which use structural analysis of visual information. B.J.

**A82-15697 *** **Digital image processing of bone - Problems and potentials.** E. R. Morey and T. J. Wronski (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Metabolic Bone Disease and Related Research,* vol. 2 S, 1980, p. 463-468. 6 refs.

The development of a digital image processing system for bone histomorphometry and fluorescent marker monitoring is discussed. The system in question is capable of making measurements of UV or light microscope features on a video screen with either video or computer-generated images, and comprises a microscope, low-light-level video camera, video digitizer and display terminal, color monitor, and PDP 11/34 computer. Capabilities demonstrated in the analysis of an undecalcified rat tibia include the measurement of perimeter and total bone area, and the generation of microscope images, false color images, digitized images and contoured images for further analysis. Software development will be based on an existing software library, specifically the mini-VICAR system developed at JPL. It is noted that the potentials of the system in terms of speed and reliability far exceed any problems associated with hardware and software development. A.L.W.

**A82-15698 *** **Neurotrophic factor - Characterization and partial purification.** H. Popiela and S. Ellis (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Developmental Biology,* vol. 83, 1981, p. 266-277. 29 refs.

Recent evidence suggests that neurotrophic activity is required for the normal proliferation and development of muscle cells. The present paper reports a study of the purification and characterization of a neurotrophic factor (NTF) from adult chicken ischiatic-peroneal nerves using two independent quantitative in vitro assay systems. The assays were performed by the measurement of the incorporation of tritiated thymidine or the sizes of single-cell clones by chick muscle cells grown in culture. The greatest amount of neutrotrophic activity is found to be extracted at a pH of 8; aqueous suspensions of the activity are stable to long-term storage at room temperature. The specific activity of the substance is doubled upon precipitation with ammonium sulfate or after gel filtration, and increase 4 to 5 fold after salt gradient elution from DEAE cellulose columns. The active fraction obtained after gel filtration and rechromatography on DEAE cellulose exhibits a 7 to 10-fold increase in specific activity. Electrophoresis of the most highly purified material yields a greatly concentrated band at around 80,000 daltons. Although NTF is purified almost 10-fold as indicated by the increase in specific activity, the maximum activity of the partially purified material is greatly reduced, possibly due to a requirement for a cofactor for the expression of maximum activity. A.L.W.

**A82-15700 *** **From inanimate matter to living systems.** S. W. Fox (Miami, University, Coral Gables, FL). *American Biology Teacher,* vol. 43, Mar. 1981, p. 127-140. 65 refs. Grant No. NGR-10-007-008.

Current understandings of the origin and evolution of life on earth from inaminate matter are reviewed. Approaches to the study of early life and its origin are considered, and it is noted that whereas the inference of origins from knowledge at hand is the approach favored by most theoreticians, only the laboratory simulation of the assembly of precellular polymers to protocells under geologically relevant conditions is capable of indicating the way in which life began. Progress in simulating the step-by-step emergence of a protocell composed of ordered macromolecules and having numerous protobiological activities through stages characterized by primordial matter, amino acids, proteinoids, protocells, light-active protocells and nucleic-acid instructed cells is discussed, with particular emphasis on experiments with proteinoid microspheres formed from self-ordered copolyamino acids. The subsequent development of ordered, protometabolic, infrastructured protoreproductive protocells is examined noting the importance of the formation of lysine-rich proteinoids with catalytic activities. Attention is also given to questions of the point of the actual emergence of life and scientific and creationist objections to the theory developed. A.L.W.

**A82-15701 †** **The influence of scopolamine on the formation and fixation of temporary connections in rats with altered brain serotonin levels (Vliianie skopolamina na formirovanie i fiksatsiiu vremennyk sviazei u krys s izmenennym urovnem serotonina v golovnom mozge).** V. Nemchenko (Akademiia Nauk Ukrainskoi SSR, Institut Botaniki and Institut Gidrobiologii, Kiev, Ukrainian SSR). *Akademiia Nauk SSSR, Doklady,* vol. 250, no. 6, 1980, p. 1466-1469. 8 refs. In Russian.

A mathematical model is proposed for the spatial distribution of photosynthesis products (assimilates) in the above-ground and underground parts of plants. The model considers the processes of growth, absorption and the accumulation of substances by cells as continuous in time, and contains explicit equations for the dynamics of the factors specifying the condition of the underground and above-ground parts during the growth of a root vegetable. Possible applications of the model include the description of the relation between the productive and reproductive parts of plants during the growth process, the distribution of assimilates in storage organs, and the formation of the spatial forms of fruits or root vegetables, and the calculation of the influence of ecological factors on the production process. **A82-15703 †** **EEG-correlates of training in the voluntary control of heart rate in man (E.e.g.-korreliaty obucheniia proizvol'nomu kontroliu chastoty serdtsebienii u cheloveka).** A. N. Borgest, M. I. Talan, and V. N. Chernigovskii (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 250, no. 6, 1980, p. 1487-1490. 12 refs. In Russian.

Changes in EEG processes occurring during the training of healthy human subjects in the voluntary control of heart rate are investigated. Four subjects were monitored by means of electrocardiography and electroencephalography before and after a period of conditional training based on a punishment avoidance model to change, increase and decrease heart rate at will. Amplitudes of the integrated delta- and theta-wave spectra are found to increase significantly during training in the increasing or changing of heart rate, even if the actual rate change was not accomplished, while the alpha waves increased in integrated amplitude during training in acceleration and decreased during training to slow the heart beat. Spontaneous changes in heart rate are observed to be directly related to changes in alpha-wave amplitude, while the slow-wave patterns do not change at all during spontaneous increases in heart rate and decline during spontaneous decreases. It is proposed that the theta-rhythm variations during heart rate control training reflect a complex relationship between emotional factors of the situation and the adjustment of autonomic functions. A.L.W.

A model is developed expressing the diurnal variation in bone marrow cell division rates. The model is based on data obtained from taps of healthy bone marrow of 77 patients with localized malignant tumors taken at various times of the day, which indicates the greatest number of cell divisions to take place at 3 a.m., and the fewest to take place from 3 to 6 p.m. The rate of cell divisions is expressed as a sine curve with a peak at 3 a.m. corresponding to the M (mitotic) phase of the cell cycle, and the G1, S and G2 phases distributed in the day according to the period of time at which the greatest number of cells are expected to be found in the corresponding state. The model may be used to determine the time of day most suitable for the administration of various phase-specific myelotoxic agents. A.L.W.

Sirotina (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 256, no. 1, 1981, p. 225-227. 6 refs. In Russian.

The tolerances of warm-blooded animals to various temperature regimes in a hyperbaric helium-oxygen medium similar to that encountered in deep-sea diving are investigated. Experiments were performed on 85 guinea pigs maintained in a helium-oxygen atmosphere at a pressure of 3,600,000 Pa for 24 hours at temperatures from 22 to 40 C. The animals are observed to have perished at the end of 24 hours when kept at temperatures less than 30 C or greater than 36 C, with deaths occurring sooner the further the environmental temperature was from this zone. Analysis reveals the primary cause of death in these instances to be the disruption of temperature homeostasis. Results thus reveal that normal thermoregulatory mechanisms lose their effectiveness under hyperbaric conditions in an oxygen-helium medium, so that a narrow temperature range must be maintained to prevent either a harmful lowering or elevation in body temperature. A.L.W.

**A82-15707** † **Structural changes in motor neurons during hind limb immobilization (Strukturnye sdvigi v motoneironakh pri immobilizatsii zadnikh konechnostei).** T. E. Korneeva and O. S. Merkulova (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 258, no. 1, 1981, p. 247-249. 12 refs. In Russian.

The nature and direction of structural changes in the spinal chord motor neurons of animals with their hind limbs immobilized for periods of from 1 to 5 weeks are investigated. Experiments were performed on frogs kept in a refrigerator and accustomed to a sedentary way of life so as to minimize experimental stresses, and consisted of the determination of perikaryon, nuclear and glycogen areas in motor neurons extracted from the lumbar enlargement of the spinal cord after 1, 2, 4 and 5 weeks of motionlessness. The reduction in the flow of afferent nerve impulses from the peripheral organs is observed to induce complex changes in nerve cell structure, including an initial increase, followed by a decrease, in cytoplasm area, and an increase in nuclear size. It is concluded that a limitation in motor activity leads to an impairment in spinal center functioning expressed as a decline in the excitability and structural rearrangements of nerve cells. A.L.W.

**A82-15708** † **The classification of hypoxic conditions (O klassifikatsii gipoksicheskikh sostoianii).** A. Z. Kolchinskaia (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 3-10. 20 refs. In Russian.

The various schemes developed for the classification of hypoxic conditions are examined. Following a brief review of the origin of the term and its recognition as the cause of various conditions, the system adopted at the conference in Kiev in 1949 is presented which distinguishes between hypoxic hypoxia, arising as a result of a decrease in oxygen partial pressure in the inspired air, difficulties in oxygen permeability into the blood, and disturbances in external respiration; hemic hypoxia due to a decrease in the oxygen binding capacity of hemoglobin; circulatory oxygen deprivation caused by a decrease in oxygen transport; and tissue hypoxia, in which tissues are unable to utilize oxygen supplied at normal levels, and which is argued to be a legitimate case of hypoxia. Difficulties in using the 1949 system are pointed out, and a new classification system is proposed which recognizes eight basic types of hypoxia: hypoxic, hyperoxic, hyperbaric, respiratory, circulatory, hemic, tissue and stress hypoxia, and which distinguishes between five stages in its development: latent, compensated, expressed with advancing decompensation, uncompensated and terminal. A.L.W.

**A82-15709** † **The oxygen regime of the human organism under conditions of extreme hypobaric hypoxia (Kislorodnyi rezhim organizma cheloveka v usloviiakh krainikh stepenei gipobaricheskoi gipoksii).** E. A. Kovalenko, A. Iu. Katkov, V. N. Sementsov, M. P. Bobrovnitskii, and R. N. Chabdarova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 26-31. 15 refs. In Russian.

The dynamics of alveolar, capillary and skin oxygen tension in humans under hypobaric hypoxia at simulated altitudes between 8000 and 10,000 m are investigated. Measurements were made during stepwise and continuous ascents to the simulated altitude tolerance level of up to 10,000 m before and after exposure to either impulsive pressure chamber training or altitude adaptation at 4200 m. It is found that upon ascent to 8000 m, the oxygen tension gradients between alveolar air and capillary blood as well as between capillary blood and the skin decrease. Altitude training is observed to lead to an increase in the maximum altitude tolerated as signaled by the performance of a simple mental task, accompanied by an increase in oxygen tension in the capillary blood, however not in the skin. **A82-15710** † **Influence of 15-day alimentary starvation on human tolerance to the breathing of pure nitrogen (Vliianie 15-dnevnogo alimentarnogo golodaniia na perenosimost' chelovekom dykhaniia chistym azotom).** A. Iu. Katkov, N. K. Loginova, R. N. Chabdarova, Iu. B. Zolotareva, and T. A. Katargina (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem; Tsentral'nyi Nauchno-Issledovatel'skii Institut Stomatologii, Moscow, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 66-68. 8 refs. In Russian.

Results are presented of an investigation of the effect of alimentary starvation on human tolerance to hypoxia induced by the breathing of pure nitrogen. Subject tolerance times to breathing pure nitrogen were assessed according to performance at a simple writing task, and correlated with continuous simultaneous measurements of respiratory minute volume, respiration and heart rates, electroencephalograms, rheoencephalograms, skin oxygen tension, general gas exchange and degree of deoxygenation. Following the 15-day period of complete fasting, tolerance times to the breathing of pure nitrogen are observed to increase by a factor of approximately 2. Data indicate that the antihypoxic effect of starvation is due to decreased oxygen demand and a decrease in oxygen concentration in the expired air, and is accompanied by changes in the functional states of cerebral vessels and peripheral microvessels. A.L.W.

**A82-15711 † Some characteristics of the aerial evacuation of the sick and otorhinolaryngologically injured (Nekotorye osobennosti evakuatsii vozdushnym transportom LORranenykh i bol'nykh).** F. N. Tetsrin and O. A. Nakapkin. *Voenno-Meditsinskii Zhurnal,* July 1981, p. 20, 21. 6 refs. In Russian.

Problems encountered and possible solutions to them in the aerial evacuation of the sick and persons with otorhinolaryngeal injuries are discussed. The most common problem is motion sickness, which is observed in 3% of healthy passengers on jet airplanes and 10% on conventional aircraft and which may aggravate existing vestibular lesions. For this reason, those patients susceptible to motion sickness are evacuated in a lying position and asked to fix their vision at a determined point, and certain antimotion sickness drugs may be administered prior to take-off, including atropine, scopolamine, pyridoxine, dimedrol and aeron. Significant variations in barometric pressure may also cause barootitis and barosinusitis in evacuated patients, which may be prevented by the deceleration or cessation of descents, swallowing maneuvers, loud conversation, lower jaw movements or ear inflation. Counterindications to aerial evacuation remain, however, in cases of injury or illness accompanied by breathing difficulty, unstopped heavy nosebleed, and abundant liquorrhea with combined otorhinolaryngeal organ and skull damage. A.L.W.

**A82-15712 † Management by means of muscular activity under unloaded conditions (Upravlenie aktivnost'iu myshts v 'beznagruzochnykh' usloviiakh).** A. V. Kovalik (Penzenskii Politekhnicheskii Institut, Penza, USSR). *Gigiena Truda i Professional'nye Zabolevaniia,* Aug. 1981, p. 44, 45. In Russian.

The potential of selective muscular activity in the absence of any external burden for the prevention of hypodynamia is assessed. In a first series of experiments, the possibility of voluntarily effecting maximum exercise of various muscles was confirmed by measurements of muscle force and bioelectrical activity, although in most cases the magnitude of the exercise was less in the unloaded state than when overcoming some external burden, and various muscle groups showed more controllability than others. Measurements of the durations possible for alternating muscle exercise in the unloaded state have shown them to range up to 3 hours. The possibility of effecting muscular exercise under unloaded conditions thus allows the development of a training program aimed at improving muscular sense and elevating muscular activity at any time and under any conditions, and permits management by muscular function, guided only by muscular sense. A.L.W.

**A82-15713 † The nature of induced EEG activity in the alpha-rhythm range (O prirode vyzvannoi aktivnosti EEG v diapazone al'fa-ritma).** F. Ia. Zolotarev (Leningradskii Nauchno-Issledovatel'skii Institut Ekspertizy Trudosposobnosti i Organizatsii Truda Invalidov, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, July-Aug. 1981, p. 586-592. 10 refs. In Russian.

The characteristic of alpha-wave activity induced by periodic photostimulus are investigated. Background and induced EEG activity was recorded in subjects lying in a darkened room with their eyes closed 15 cm away from a photostimulator emitting pulses at repetition frequencies from 8 to 14/sec. At stimulation frequencies of 8.0 and 9.5 pulses/sec, the descending front of the induced alpha wave is found to be longer than the ascending front. As the stimulus frequency increases, the duration of the descending front is observed to decrease while the ascending front maintains the same duration, resulting in the descending front becoming shorter than the ascending front. Further increases are observed to lead to a shortening of the ascending front so that the two fronts become equalized. Results, when regarded within the context of the dipole theory of neurons, suggest that both induced and background alpha waves represent an inhibitory post-synaptic potential in cortical neuron membranes. A.L.W.

**A82-15714 † Mechanisms of temporal discrimination in the visual analyzer (O mekhanizmakh vremennoi diskriminatsii signalov v zritel'nom analizatore).** V. I. Shostak and E. B. Stepanian (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, July-Aug. 1981, p. 612-615. 17 refs. In Russian.

The functional labilities of various segments of the visual analyzer are measured in an investigation of the mechanisms determining the critical flicker fusion frequency, which has been established to be significantly lower than the functional lability of other nervous mechanisms. Ocular electrical sensitivity and the critical frequency for the disappearance of a flickering electrical phosphene were measured in subjects viewing achromatic and colored light signals at various levels of illumination. The electrical sensitivity threshold is found to depend on background illumination level, decreasing during the transition from darkness to the photopeak level. Electrical sensitivity is also observed to decrease from white to green to blue to red light. Critical flicker fusion frequencies determined under the same conditions never exceeded 43 Hz, while frequencies for electrically generated phosphene fusion ranged from 59 to 64 Hz. Results demonstrate that the functional lability of the visual analyzer depends upon the level of adaptation, and suggest that the temporal discrimination capacity of the visual analyzer is greater than the afferent system as a whole due to the relatively large time constant of the receptor photochemical processes. A.L.W.

**A82-15715 † Potential for the use of biorhythm structures for the prognosis of the course of a disease (Vozmozhnosti ispol'zovaniia struktury bioritmov v tseliakh prognoza techeniia zabolevaniia).** N. I. Moiseeva, L. I. Nikitina, A. V. Morozov, V. V. Denisova, E. S. Vintergel'ter, and A. M. Litvin (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, July-Aug. 1981, p. 752-754. In Russian.

The possibility of using the dynamic characteristics of circadian rhythms in the diagnosis of the state and the prognosis of the course of disease is investigated. Measurements of arterial pressure, body temperature, muscular strength, respiratory and heart rates and time sense were made five times daily in the periods before and after, and occasionally during, treatment of 50 patients with cerebral vascular circulation disorders of various causes and 33 patients with local cerebral lesions as a result of acute craniocerebral trauma. In both groups of patients, significant differences are found between the temporal structures of the diurnal variations in physiological parameters even before the start of treatment in patients for whom the outcome of treatment was favorable and those for whom the outcome was not favorable. A marked separation of extremum values, relative constancy of these values and a rather large spread of physiological parameters over the course of the day are found to be characteristics of the curves of those patients with a favorable course of illness, while those with unfavorable outcomes exhibit curve flattening and irregularities in maxima and minima. The structure of biological rhythms can thus be used as an indicator allowing the prognosis of the course of systematic brain diseases and local lesions. A.L.W.

**A82-15716 † Removal by negative air ions of changes in mitochondrial respiration under stress (Sniatie otritsatel'nymi aeroionami izmenenii dykhaniia mitokhondrii pri stresse).** M. N. Kondrashova, E. V. Grigorenko, I. B. Guzar, and E. B. Okon (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika,* vol. 26, July-Aug. 1981, p. 687-691. 21 refs. In Russian.

The possible effects of air ions on mitochondrial oxidative phosphorylation activated by animal exposure to immobilization stress are investigated. Following a preliminary immobilization for periods of 5 to 24 hours, rats were exposed to an air ionizer producing negative ions at concentrations of about 250,000/cu cm for a period of 10 min, after which rat liver mitochondria were separated and their respiratory parameters were monitored for up to 50 min. Rates of phosphorylative metabolism measured upon the addition of succinic acid and ADP or using endogenous substrates are found to be significantly reduced in animals breathing ionized air following immobilization by an amount approximately equal to the rise in respiratory rate observed after stressing. Results thus demonstrate that the negative air ions act on the hyperergic mitochondria resulting from stress, while having little effect on the intact organism. A.L.W.

**A82-15717 † The otolith reflex and space perception in cosmonauts (Otolitovyi refleks i funktsiia vospriiatiia prostranstva kosmonavtov).** I. Ia. Iakovleva and L. N. Kornilova. *Vestnik Otorinolaringologii,* July-Aug. 1981, p. 3-6. 18 refs. In Russian.

The vestibular reflexes and space perception capacities of cosmonauts before and after space flights of duration 4-175 days are examined. The functions were evaluated repeatedly for up to 45 days preflight, 0-5 days post-flight and monthly in prolonged flights in 10 cosmonauts engaged in short-duration flights (4-19 days) and five in extended-duration flights (30-175 days) on board Soyuz or Soyuz-Salyut spacecraft. Whereas all but three of the subjects displayed normal, symmetric otolith response intensities and normal spatial coordinate perception accuracy, post-flight interrogation revealed the occurrence of various types of perceptual illusions in 90% of the subjects, and various types of physical discomfort in 50%. Changes in otolith functions were observed in the first or second day after flight on both groups of subjects, consisting of a hyperreflexia of the otolith reflex and the appearance of asymmetry in most, and a negative otolith reflex in the immediate post-flight period in some subjects. The space perceptual accuracy was found to be disturbed in all cosmonauts. The results may be explained as the vestibular reaction to an unaccustomedly strong stimulus and by a complex disturbance in sensory coordination. A.L.W.

**A82-15718** † **The frequency of vestibular impairments in chronic purulent medial otitis (Chastota vestibuliarnykh rasstroistv pri khronicheskom gnoinom srednem otite).** V. T. Grinchuk and R. Chunea (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii,* July-Aug. 1981, p. 10-12. 9 refs. In Russian.

**A82-15719** † **Rhinopneumometric indicators during repeated antiorthostatic exposures (Pokazateli rinopnevmometrii pri povtornykh antiortostaticheskikh vozdeistviiakh).** V. P. Baranova and I. Ia. Iakovleva. *Vestnik Otorinolaringologii,* July-Aug. 1981, p. 39-42. 11 refs. In Russian.

The responses of various rhinopneumometric indicators are used to evaluate the body fluid shifts taking place during repeated antiorthostatic exposures simulating weightlessness. Nasal vasomotor functions were monitored rhinopneumometrically in 30 healthy male subjects undergoing three series of repetitive antiorthostatic exposures: passive antiorthostasis on a tilt table for a period of 20 min every 1 or 2 days for a month; sleep at a head-down tilt of 5 deg for 30 days; and combined antiorthostasis on a tilt table while performing gymnastic exercises for a month. Analysis of the results indicates that intranasal resistance during antiorthostasis accurately reflects the blood redistribution to the upper half of the body taking place during adaptation to the unaccustomed gravitational conditions. A.L.W.

**A82-15720** † **Evaluation of natural convection under hyperbaric conditions (Otsenka estestvennoi konvektaii v giperbaricheskikh usloviiakh).** V. S. Koshcheev, M. A. Razran, and G. G. Ter-Akopian. *Gigiena i Sanitariia,* Aug. 1981, p. 20-22. In Russian.

The mobilities and heat transfer capacities of media in a closed volume under various pressures are investigated in a study of human thermal protection requirements at elevated pressures. A method of direct heat loss measurements involving the determination of temperature differences in the wake above an object giving off heat was used to compare the convective heat loss from humans wearing different types of clothing under different atmospheric pressures. Measurements with a calibrated heat source reveal that the bulk velocity of the gaseous medium decreases significantly with increasing pressure, thus complicating the thermographic measurements at pressures greater than 1 MPa. When used at pressures between 0.15 and 0.5 MPa, the method reveals the removal of clothing at pressures close to normal to lead to an insignificant increase in convective heat loss (less than 9%) at room temperature, while elevated pressures (0.4-0.5 MPa) cause an increase by 1/5 in convective heat loss from a clothed person, and by 1/3 in an exposed person. A.L.W.

**A82-15788** **Biologically damaging radiation amplified by ozone depletions.** S. A. W. Gerstl, A. Zardecki (Los Alamos National Laboratory, Los Alamos, NM), and H. L. Wiser (U.S. Environmental Protection Agency, Office of Research and Development, Washington, DC). *Nature,* vol. 294, Nov. 26, 1981, p. 352-354. 16 refs.

A two-dimensional model is developed for the increased UV radiation impact on humans due to atmospheric ozone depletion caused by chlorofluoromethane releases into the atmosphere. The radiation amplification factor (RAF) is calculated using a data base which includes a radiative transfer code and atmospheric models. Human sunburn, erythemal, and a generalized DNA spectrum were chosen to express the damaging UV-B effects. Worldwide UV dose levels up to 70 km were included, as well as seasonal and latitudinal variations. A global 10% ozone depletion was considered, yielding an RAF from 2.1-2.5 for erythema and 2.8-3.0 for DNA, with 10% uncertainty. The percentage ozone depletion multiplied by the RAF gives the percentage increase in erythema, DNA damage, and skin cancer rates, respectively. The most probable ozone depletions are expressed as 5-10%, with the minimal depletion occurring in equatorial regions. M.S.K.

**A82-15813** **A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots.** D. L. Damos (Arizona State University, Tempe, AZ) and G. Lintern (Canyon Research Group, Inc., Orlando, FL). *Ergonomics,* vol. 24, Sept. 1981, p. 673-684. 18 refs. Contract No. F44620-76-C-0009.

The predictive validity of single- versus dual-task measures in pilot performance involving timesharing skills is compared using two identical one-dimensional tracking tasks. The correlation between successive blocks of dual-task trials and performance in a simulator increased, while the correlation between successive early single-task trials and simulator performance decreased. The last two single-task trials, however, showed a large increase in predictive validity. A control theory analysis of selected single- and dual-task scores suggests that a multiple-task response was employed on the last two single-task trials, resulting in correlations between these trials and the simulator test comparable to those of late dual-task practice. Methodological problems associated with repeated measures designs are pointed out where the workload varies between single- and dual-task conditions. D.L.G.

**A82-15851** **Human factors of outer space production.** Edited by T. S. Cheston (Georgetown University, Washington, DC) and D. L. Winter. Boulder, CO, Westview Press, Inc. (AAAS Selected Symposia Series. Volume 50). 1980. 230 p. $18.50.

The changing requirements and opportunities of space-based activities due to the operational capabilities of the Shuttle, the heterogeneity of Shuttle and space construction crews, lengthier stays in space, advancements in technology, and economic horizons are discussed. Aspects of long duration space flights are considered in terms of the psychological considerations for crew members and space inhabitants, the possibilities for closed food cycles and nutrient requirements, and the design of space habitats, along with methods of personnel selection for psychological adaptivity and competence, new privacy necessities, and physiological changes due to weightlessness. Man-machine interfaces and the use of phytotrons to study environmental requirements of plants in space are explored, and the economic factors of outer space production and communication facilities are examined. M.S.K.

**A82-15852** * **Psychological considerations in future space missions.** R. L. Helmreich, J. A. Wilhelm, and T. E. Runge (Texas, University, Austin, TX). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 1-23. 50 refs. Grant No. NsG-2065.

Issues affecting human psychological adjustments to long space missions are discussed. Noting that the Shuttle flight crewmembers will not have extensive flight qualification requirements, the effects of a more heterogeneous crew mixture than in early space flights is considered to create possibilities of social conflicts. Routine space flight will decrease the novelty of a formerly unique experience, and the necessity of providing personal space or other mechanisms for coping with crowded, permanently occupied space habitats is stressed. Women are noted to display more permeable personal space requirements. The desirability of planning leisure activities is reviewed, and psychological test results for female and male characteristics are cited to show that individuals with high scores in both traditionally male and female attributes are most capable of effective goal-oriented behavior and interpersonal relationships. Finally, it is shown that competitiveness is negatively correlated with the success of collaborative work and the social climate of an environment. M.S.K.

**A82-15853** **Future directions for selecting personnel.** K. Natani (USAF, School of Aerospace Medicine, Brooks AFB, TX). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 25-63. 135 refs.

Experiences with Antarctic research station crew members is applied to selection procedures for space crew members. EEG tests are shown to give adequate measurements of stress levels, while multiple input-multiple response tasks reveal changes in selective attention due to physiological compensator reactions; brain hemispheric lateralization tests are noted to show underlying neutrometric degradations due to stress. The goal is to actively identify individuals with adaptively competent personalities, who will use skills and techniques effectively to reduce risk levels to which they are exposed. Nonadaptive behavior is emphasized as a potentially dangerous character trait in a novel environment, and the 45% occurrence rate of pilot error in aircraft accidents is cited. Finally, isolated duty for extended periods is known to cause personality changes, with symptoms of mental illness present during a transition phase; a favorable outcome to the transition results in an individual with greater psychological integrity. M.S.K.

**A82-15854** **Well-being and privacy in space - Anticipating conflicts of interest.** J. E. Sieber (California State University, Hayward, CA). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 65-78. 15 refs.

The concept of privacy is explored for means of anticipating changing privacy requirements by long term space inhabitants. Because cultural and situational conditions of privacy vary throughout the world, it is suggested that space travellers will establish their own criteria for personal sharing and the control of the flow of information about their lives. A developmental theory of privacy is reviewed, and a breach of privacy is regarded as a form of stress. Failure to adjust to a new environment which causes stress results in an unsuccessful adaptation syndrome, producing measurable physiological changes, e.g. loss of muscle tone or high blood pressure. The effects of stress can affect the stability of fellow workers and the level of work quality, factors which can be catastrophic in a space environment. The possibilities of enhancing the opportunities for stress by continuous monitoring of the physiological state of space inhabitants through telemetry are discussed. M.S.K.

**A82-15855** **Habitat requirements, design and options.** R. L. Kline (Grumman Aerospace Corp., Bethpage, NY). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 79-96.

The steps to permanent human habitations in LEO and GEO are outlined, and the functions and shelter of man in space for long time periods are examined. Space observation and space processing missions will lead to use of orbital cherry pickers, both open and closed, a manned orbit transfer vehicle (MOTV), and eventually to self contained habitats, along with shelters for times of solar flares. Radiation protection requirements for LEO and GEO habitats are defined, noting that the use of tantalum on the inside hull of a GEO habitat will impose weight penalties for the MOTV. Rescue operations from GEO to MOTV to Shuttle to earth are noted to require at least six days, while severely ill persons could be transported in a GEO direct-to-earth lifeboat in six hours. M.S.K.

**A82-15856 *** **Nutritional criteria for closed-loop space food systems.** P. C. Rambaut (NASA, Washington, DC). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 113-131. 12 refs.

The nutritional requirements for Skylab crews are summarized as a data base for long duration spaceflight nutrient requirements. Statistically significant increases in energy consumption were detected after three months, along with CO2/O2 exhalation during exercise and thyroxine level increases. Linoleic acid amounting to 3-4 g/day was found to fulfill all fat requirements, and carbohydrate and protein (amino acid) necessities are discussed, noting that vigorous exercise programs avoid deconditioning which enhances nitrogen loss. Urinary calcium losses continued at a rate 100% above a baseline figure, a condition which ingestion of vitamin D2 did not correct. Projections are given that spaceflights lasting more than eight years will necessitate recycling of human waste for nutrient growth, which can be processed into highly efficient space food with a variety of tastes. M.S.K.

**A82-15857 *** **Rationale for evaluating a closed food chain for space habitats.** M. Modell (MIT, Cambridge, MA) and J. M. Spurlock (Georgia Institute of Technology, Atlanta, GA). In: Human factors of outer space production. Boulder, CO, Westview Press, Inc., 1980, p. 133-145. 10 refs. NASA-sponsored research.

Closed food cycles for long duration space flight and space habitation are examined. Wash water for a crew of six is economically recyclable after a week, while a total closed loop water system is effective only if the stay exceeds six months' length. The stoichiometry of net plant growth is calculated and it is shown that the return of urine, feces, and inedible plant parts to the food chain, along with the addition of photosynthesis, closes the food chain loop. Scenarios are presented to explore the technical feasibility of achieving a closed loop system. An optimal choice of plants is followed by processing, waste conversion, equipment specifications, and control requirements, and finally, cost-effectiveness. M.S.K.

One of the mission requirements of the Space Shuttle is to serve as a working platform for experiments in space. Many of these experiments will be performed by crewmembers (mission specialists and payload specialists) in a general purpose laboratory called Spacelab. All nonexperiment-related activities or housekeeping activities will be done in the Orbiter, while most of the mission-related activities (experiments) will be done in Spacelab. In order for experimenters to design their experiments to best utilize the capabilities of the Orbiter, the Spacelab, and the crew, the working environment in the Orbiter and in Spacelab is described. In addition, the housekeeping activities required of the crew are summarized. T.M.

**HIGHER PLANT ACCLIMATION TO SOLAR ULTRAVIOLET-B RADIATION Ph.D. Thesis**
Ronald Robberecht 1981 109 p
Avail: Univ. Microfilms Order No. 8121390

Plant acclimation to natural and intensified solar UV-B irradiance was investigated in three species, to determine: (1) the relationship between plant sensitivity and epidermal UV attenuation, (2) the effect of phenotypic changes in the leaf epidermis, resulting from UV-B exposure, on plant sensitivity to UV radiation, and (3) the plasticity of these changes in the epidermis leading to plant, acclimation to UV-B radiation. Epidermal UV transmittance was found to differ in magnitude and spectral distribution among the three species. Photosynthesis was not significantly depressed in the leaves of any of three species. A trend toward photosynthetic depression of response to UV-B irradiation was found. A mechanism of UV-B attenuation, and increase in the UV-B attenuation capacity of the epidermis, is suggested. It is suggested that the degree of plant sensitivity and acclimation to natural and intensified solar UV-B radiation involves a dynamic balance between the capacity for UV-B attenuation and UV-radiation repair mechanism in the leaf. Dissert. Abstr.

Ivar Walaas Apr. 1981 26 p refs
(NDRE/PUBL-81/1001; ISSN-0085-4301) Avail: NTIS HC A03/MF A01

The localization of different transmitter candidate, particularly the amino acids gamma aminobutyrate (GABA) and glutamate (GLU), in limbic and basal ganglia regions in the rat brain was compared and the characteristics of nucleus accumbens were studied. The GABA neurons are found in nucleus accumbens, and GABA projections from this nucleus are identified in restricted basal forebrain and mesencephalic regions. The GLU projections from the neocortex or allocortex are terminated in nucleus accumbens and other forebrain and hypothalamic nuclei. Neurotransmitters in local neurons are identified in the hippocampus, nucleus accumbens, septum and caudatoputamen by local kainic acid injections, while neurons in the mediobasal hypothalamus are studied after systemic treatment of newborn animals with monosodium glutamate. (NASA-Case-ARC-11322-1; US-Patent-Appl-SN-315278) Avail: NTIS HC A02/MF A01 CSCL 06C

A sample containing coliform bacteria is cultured in a liquid growth medium. The cultured bacteria produce hydrogen which is vented to a second cell containing a buffer solution in which the hydrogen dissolves. By measuring the potential change in the buffer solution caused by the hydrogen, as a function of time, the initial concentration of bacteria in the sample is determined. Alternatively, the potential change in the buffer solution can be compared with the potential change in the liquid growth medium to verify that the potential change in the liquid growth medium is produced primarily by the hydrogen gas produced by the coliform bacteria. **AN ENGINEERING STUDY OF BACTERIAL KINETICS AND ENERGETICS Ph.D. Thesis**
A. A. Esener 1981 130 p refs
Avail: NTIS HC A07/MF A01

Bacterial kinetics and energetics were studied with reference to engineering applications. Three processes were identified: (1) to biosynthetic process during which presursors are formed from the substrate followed by the polymerization of them into biomass; (2) product formation; and (3) the maintenance processes. The distribution of the input energy and mass in the form of the substrate was studied in an attempt to manipulate the distribution so as to minimize the overall cost of the product. This was accomplished by describing the whole process in terms of a mathematical model and optimizing it according to an objective function. R.J.F.

**GASTROINTESTINAL ALLERGY IN THE EXPERIMENTAL ANIMAL: THE USE OF RADIOIODINATED SERUM ALBUMIN IN THE ASSESSMENT OF NEW DRUGS Final Report, 15 Oct. 1977 - 30 Nov. 1979**
S. Freier Mar. 1980 24 p refs
(IAEA-R-2067-F) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

A rat model to study of gastrointestinal allergy and means to prevent it was developed. Allergic sensitivity to certain proteins by injecting proteins and adjuvants in various regimes was induced in rats. For suckling rats sensitivity was established by oral administration of the protein. A hypersensitive gastrointestinal reaction to challenge was demonstrated by electron microscopy, by light microscopy with conventional staining techniques, and by a radionuclide procedure wherein (51) Cr labelled albumin injected intravenously shortly before the challenge concentrated in the intestinal walls in rough proportion to the severity of the reaction. It is found that suppressing the hypersensitive intestinal reaction, disodium cromoglycate, dexamethazone, aspirin, indomethecan, and ipobrufen are ineffective and aminophylline was a slight amelioration. Automated cell recognition systems with high resolution which are required to analyze separate cells to detect cellular margins are discussed. Classified cells are used for compiling a learning data set. The preparation technique was improved, aiming at sufficient cellular isolation. In order to create a learning data set, 10,000 isolated cells were selected. The preparation procedure entails a distinct increase of isolated squamous epithelial cells and a diminution of clusters as well as white blood cells. The significance of specific and stoichiometric staining is shown. Author (ESA)

**SWEATING RESPONSES OF MEN AND WOMEN DURING EXERCISE IN HUMID AND DRY HEAT Ph.D. Thesis**

Andrea Jean Frye 1981 80 p
Avail: Univ. Microfilms Order No. 8120427

Four men and four women were matched on aerobic capacity and surface area to weight ratio. Each subject was acclimated to and tested in two equivalent environments (dry bulb temperature and wet bulb temperature). Maximum density of sweat gland activation (SGA sub max) was determined with the use of methacholine. Suppression of sweating due to skin hydration (hidromeiosis) was evidenced in both sexes by significantly lower total body sweat rate (m sub sw) and chest sweat rate (m sub sw) in the humid heat as compared to the dry heat. The women maintained significantly lower M sub sw and chest m sub sw than the men in the humid heat, but there were no differences in sweating rates between sexes in the dry heat. In the women, the SGA relative to SGA sub max) (% SGA sub max) was significantly higher in the dry heat than in the humid heat. SGF was similar in both environments. In the men, SGF was significantly higher in the dry heat than in the humid heat, while %SGA sub max was similar in both environments. The women were more sensitive to hidromeiosis than the men, and the nature of the response to hidromeiosis differed between the sexes. Dissert. Abstr.

**MEDICAL DIAGNOSTIC APPLICATION OF RADIOFREQUENCY RANGE ELECTROMAGNETIC WAVES Ph.D. Thesis**

Michael Raymond Millner 1981 139 p
Avail: Univ. Microfilms Order No. 8120287

A method has been developed, using a scattering or S parameter network analyzer and a loop antenna, for measuring the phase change of the forward reflection S parameter, S11, in relation to volume changes. A phantom was designed utilizing a balloon immersed in saline with displacement volume measured in a standpipe. Volume changes were related to both changes in phase and amplitude of the S11. A model was developed, based on basic electromagnetic theory, of a wave propagating through a layer of water of varying thickness bounded by air. The complex reflection coefficient was calculated, plotted, and compared to the S11 for the phantom. Several different antenna designs were tested, including varying size and types. This method was applied to the study of breathing and cardiac volume changes in man. Both the amplitude and phase of the S11 parameter were correlated with a simultaneously recorded electrocardiogram. In order to correlate these measurements with cardiac volume changes, a dog was anesthetized, and by means of the thermal dilution technique, cardiac output was determined. Dissert. Abstr.

**MEASUREMENT OF THE BONE MINERAL DENSITY OF TRABECULAR BONE BY A COHERENT AND COMPTON SCATTERING TECHNIQUE Ph.D. Thesis**

Shih-Shen Ling 1981 170 p
Avail: Univ. Microfilms Order No. 8120996

A simplified photon scattering method to measure the bone mineral density of the trabecular bone was studied. The method used the simultaneous detection of the coherent and Compton scattered photons from the bone sample in a narrow beam geometry. The bone mineral density is determined within the scattering volume which is defined by the configuration of the source and detector collimators and scattering angle. The size of the scattering volume is determined by the aperture diameter and the length of both the source and detector collimators for a geometric configuration, and scattering angle. The corrections to the coherent to Compton scattering ratio due to the presence of overlying tissue and the effect of fat content of the sample to this technique was also studied. A four source focused collimator was constructed to increase the incident photon intensity. Dissert. Abstr.

**THE MAGNETOSTATIC FORCE PRODUCED BY CURRENT LOOPS AND IS MEDICAL APPLICATIONS Ph.D. Thesis**

Osman Kaldirim 1981 132 p
Avail: Univ. Microfilms Order No. 8120984

The magnetostatic force on permeable bodies both theoretically and experimentally was studied. Recent technological advances are tremendously advantageous to the delivery of protein carrying biologically active substances. The use of magnetic fields serves as the driving force in a guidance system to transport these substances to specific sites within the living system. Spheres of protein approximately one micron in diameter are impregnated with magnetite (Fe3O4) along with other desired substances, this combination of elements is then injected into the bloodstream. Once in the bloodstream they flow freely until the desirable site is reached. The magnetic fields and manetostatic forces which are necessary in the control of microspheres were analyzed. A theoretical analysis of the magnetostatic force due to current loops was made consisting of a systematic design and an experimental study involving the effects of magnetostatic forces on microspheres injected into animals. Dissert. Abstr.

**TRANSCUTANEOUS ELECTRICAL PERIPHERAL NERVE STIMULATION: IMPLICATIONS FOR NEURAL CONTROL MECHANISMS Ph.D. Thesis**

Darrell Neal Jones 1981 158 p
Avail: Univ. Microfilms Order No. 8122295

Transcutaneous electric nerve stimulation (TENS) is used clinically to control chronic pain. Large nerve fiber activity which is induced by TENS is hypothesized to inhibit pain signals at spinal levels via the gate control mechanism. While TENS is highly effective in the control of chronic pain, few additional neural function effects are reported clinically. The paucity of such observations is enigmatic since the large fiber involvement characteristic of TENS impacts numerous peripheral neural functions. A battery of performance tests was given to volunteers under control conditions and acute clinical levels of TENS. The tests included reaction time tests, force estimation tasks, touch discrimination tests and temperature discrimination tests. The results show no significant TENS effects on sensory discrimination. However, TENS significantly affects motor function, as defined by slowed reaction times and reduced range of response in force estimation. Dissert. Abstr.

**THREE-DIMENSIONAL STRESS DISTRIBUTION IN ARTERIES: RADIAL COMPRESSION EXPERIMENTS OF ARTERIAL WALL; STRESS CONCENTRATION IN LUNG NEAR A CYLINDRICAL CAVITY; FINITE ELEMENT ANALYSIS OF PLEURAL SURFACE PRESSURE DISTRIBUTION IN DOG'S LUNG DURING ELECTROPHRENIC STIMULATION Ph.D. Thesis**

Cheng-Jen Chuong 1981 167 p
Avail: Univ. Microfilms Order No. 8120521

A three dimensional stress strain relationship derived from a strain energy function of the exponential form was proposed for arterial wall. The effect of the nonuniform stress field in the radial direction on the water movement in arterial wall is pointed out. The elastic behavior of rabbit thoracic arteries in radial direction was studied by uniaxial compression order of magnitude of the elasticity in radial direction is the same as that in the circumferential and longitudinal directions. In the vicinity of cylindrical cavity the lung parenchyma can be subjected to very high stress concentration in the circumferential direction. Stress distributions at various infinity stretches as well as longitudinal stretches are given. During the electrophrenic stimulation the diaphragm contracts lowers and the apex t base length of the lung increase up to 25%. It is observed that reversal pleural pressure (p sub pl) gradient in which the basal p sub pl becomes more negative than the optical. This phenomena is studied by finite element method. Dissert. Abstr.

(NASA-CR-167461) Avail: NTIS HC A04/MF A01 CSCL 06P

The water balance of the Skylab crew was analyzed. Evaporative water loss using a whole body input/output balance equation, water, body tissue, and energy balance was analyzed. The approach utilizes the results of several major Skylab medical experiments. Subsystems were designed for the use of the software necessary for the analysis. A partitional water balance that graphically depicts the changes due to water intake is presented. The energy balance analysis determines the net available energy to the individual crewman during any period. The balances produce a visual description of the total change of a particular body component during the course of the mission. The information is salvaged from metabolic balance data if certain techniques are used to reduce errors inherent in the balance method. E.A.K.

(AD-A104702) Avail: NTIS HC A07/MF A01 CSCL 06/20

The chemical composition and subunit structure of the basement membrane and collagenous components of the normal lung and of lungs exposed to agents promoting the formation of singlet oxygen and thereby produce oxidative damage to tissue components was investigated. The alveolar basement membrane, the structure and composition of this component of the extracellular matrix of the lung is determined that a complex population of proteins make up the extracellular matrix. Several new collagen types are described as well as high molecular weight non collagens that appear to be associated with normal basement membranes. It is concluded that the characterization of putative changes in the nature of matrix components in pathologic states lags behind a more thorough characterization of normal basement membrance and extracellular components. E.A.K.

Avail: NTIS HC A02/MF A01

The repair of chemical damage to DNA is discussed. Most chemicals of environmental concern do not react directly with cellular macromolecules but must first be activated to nucleophiles. The different reactivities between agents reacting directly and those that react indirectly may produce products whose yields as a function of dose are completely different even though the products themselves may be the same. Nucleotide excision measurements of DNA repair are used extensively to detect agents that react with DNA which measurements help identify dangerous DNA adduct. The chemical damages that mimic UV are repaired by nucleotide excision, and the chemicals give rise to bulky adducts. The excision repair of bulky DNA adducts mimics the repair of UV damage in many ways, however the identity of the repair pathways is still controversial. DOE

(Contracts DE-AS05-76EV-04157; EY-76-S-05-4157)
(DE81-030668; DOE/EV-04157/T3) Avail: NTIS HC A07/MF A01

The correlation between the removal from the circulation of aged cells and the production of new RBCs was investigated. An erthropoietic influence was associated with the glycocalyx of the erythrocyte membrane. The influencing factor, asialoglycophorin, was masked on the young RBC by an amino ketosugar, sialic acid. During the aging process, an increasing amount of sialic acid is removed from the membrane to expose the underlying erythropoietic message. The amount of erythropoietic activity was directly related to the number of desialated erythrocytes transfused and to the degree of desialation of the transfused erythrocytes. It is shown that asialoglycophorin is an erythrocyte stimulating factor following its isolation from the membrane and subsequent injection into test mice and both mouse and human asialoglycophorin and stimulatory. Annual doses to the Australian population were derived for the year 1970 using results of a survey carried out at that time and published data on doses to individuals resulting from such use. Values of 3.9 and 38 microgray for the annual (per capita) genetic and mean bone marrow doses respectively are reported, which are similar to those reported for other countries at about that time. T. N. Swindon and N. D. Morris Jun. 1980 111 p
(ARL/TR-017) Avail: NTIS (US Sales Only) HC A06/MF A01; DOE Depository Libraries

The results of a national survey of radiological procedures used for diagnosis and therapy in medicine, dentistry, and chiropracty are reviewed. Statistical data for the distribution and frequency of various procedures in Australian hospitals and practices are summarized, together with their associated radiation doses. Annual genetically significant and mean bone-marrow doses to the Australian population arising from these procedures are derived for the survey year of 1970. Values of 176 microgray and 651 microgray for the annual (per capita) genetic and mean bone-marrow doses respectively are reported. These compare closely with corresponding estimates in other countries with similar medical practices to those in Australia. DOE

A procedure for the separation and identification of polynuclear aromatic hydrocarbons (PNAs) is presented. This procedure comprises two steps. First, the shale oil is separated into fractions according to ring size on a Chromosorb LC-9 normal phase column. Then each of these fractions are separated into individual components and identified using an analytical reversed-phase Ultrasphere ODS 5 micrometer column. In addition, toxicity studies are carried out on each fraction obtained from the amine column to indicate which class of PNAs warrants special attention and analysis. The results of this approach are reported. T.M.

(NPL-Ac-100; ISSN-0143-7143) Avail: NTIS HC A03/MF A01

Air and bone conduction threshold determinations for 152 subjects in the age range 18 to 30 years are presented. Bone conduction tests were carried out using a vibrator applied to the left and right mastoid under three conditions at the contralateral ear: unoccluded, masked at 25 dB, and at 40 dB sensation level. By a systematic process of otological classification of the subjects, the bone conduction threshold for normal hearing was estimated with an uncertainty of less than 1 dB and was interpolated for masking noise levels from zero to 40 dB sensation level. Individual air-bone gaps are shown to be widely spread for an otologically normal group, but distributions are normal and have a mean value close to zero. Author (ESA)

G. R. Torr and L. S. Whittle Jun. 1981 45 p refs
(NPL-Ac-101; ISSN-0143-7143) Avail: NTIS HC A03/MF A01

The accuracy and uniformity achieved in the calibration of bone conduction audiometers used in hospitals were studied. The acceleration output of precalibrated bone vibrator supplied as part of an audit kit was measured. the precalibration of the bone vibrator is on the order of 2 dB at all test frequencies, although the differences between the individual results and precalibration attained 5 dB at extreme frequencies in a few cases. However, differences are substantially reduced by reinterpreting the hospital measurements using determinations of the sensitivities of the artificial mastoids and by correcting the measurements to a common temperature. ### THE HEART RATE OF ASPIRANT AIR PILOTS IN A HYPOBARIC CHAMBER

A. W. K. Gaillard and C. L. Truijens 1979 21 p refs
(Contract A72/K/070)
(IZF-1979-35; TDCK-73413) Avail: NTIS HC A02/MF A01

Changes in heart rate, caused by stress induced when atmospheric pressure in a hypobaric chamber is suddenly decreased, are studied. The use of heart rate variables as a pilot selection criterion is also considered. Results show that the heart rate measures only differ between a group of experienced subjects and the other groups. No correlations are found between the heart rate measures and personality test scores, which were obtained from questionnaires given directly after stress exposure. Author (ESA)

### DAMAGE RISK CRITERIA FOR IMPULSE NOISE

G. F. Smoorenburg 1980 35 p refs Presented at Intern. Symp. on New Perspectives on Noise Induced Hearing Loss, Cazenovia, New York, 15-18 Jun. 1980
(Contract A76/K/103)
(IZF-1980-26; TDCK-75018) Avail: NTIS HC A03/MF A01

Data on temporary threshold shifts (TTS) due to impulse noise exposure are evaluated. Peak levels of the impulses are determined at which only 10% of the people exposed show TTS, two minutes after exposure, of 15 dB or more averaged over the threshold shifts at 1, 2, and 3 kHz (TTS 1, 2, 3 > 15 dB). These peak levels are a function of the number of impulses per exposure times the duration of a single impulse. The result is compared with TTS data on steady noise as a function of exposure duration, and with data on permanent threshold shifts (PTS) induced by impulse and intermittent noise. This suggests that < 10% of the people exposed to impulse noise each working day will develop noise induced PTS 1, 2, 3 of 15 dB or more if the equivalent level of the noise is 85 dB. The hearing loss fence of 15 dB PTS 1, 2, 3 is discussed for loss of speech discrimination in a noisy background and it is shown that a higher fence cannot be allowed. The attenuation from ear plugs is less than laboratory values. Author (ESA)

### PILOT ESTIMATES OF GLIDEPATH AND AIM POINT DURING SIMULATED LANDING APPROACHES

C. W. Acree, Jr. Nov. 1981 21 p refs
(NASA-TM-81325; A-8717) Avail: NTIS HC A02/MF A01 CSCL 05I

Pilot perceptions of glidepath angle and aim point were measured during simulated landings. A fixed-base cockpit simulator was used with video recordings of simulated landing approaches shown on a video projector. Pilots estimated the magnitudes of approach errors during observation without attempting to make corrections. Pilots estimated glidepath angular errors well, but had difficulty estimating aim-point errors. The data make plausible the hypothesis that pilots are little concerned with aim point during most of an approach, concentrating instead on keeping close to the nominal glidepath and trusting this technique to guide them to the proper touchdown point. Author

### HOW TO DISPLAY DIGITAL SONAR SIGNALS. SOME PRIMARY THRESHOLD MEASUREMENTS

A. vanMeeteren and A. F. Sanders 1979 20 p refs
(Contract A73/KM/032)
(IZF-1979-16; TDCK-73399) Avail: NTIS HC A02/MF A01

The optimal task division between operator and computer when trying to identify echos in sonar observation of a noisy field is discussed. Confidence ratings defined four criteria, ranging from sure no target to sure target, and results were scored as d values as a measure of detectability at the different criteria. The d values are higher towards the sure target end of the range. There are significant differences between subjects, but none for interactions between subjects and display variables. It is found that at high display thresholds the intensity mode works best, whereas at display the length mode is superior regarding target detection. Author (ESA)

### CONSPICUITY OF OBSERVATION POSTS AT THE AIR WEAPON FIRING RANGES ON THE VLIEHORS AND THE NOORDVAARDER

J. Boogaard, J. Varkevisser, and J. J. Vos 1979 20 p ref Transl. into ENGLISH of 'Opvallendheid van observatieposten op de schietranges of de Vliehors en de Noordvarrder' Soesterberg, Netherlands
(Contract A78/KLu/058)
(IZF-1979-33-E; TDCK-73411) Avail: NTIS HC A02/MF A01

Visibility from the air of observation posts is examined in order to decrease the likelihood of their being mistaken for targets. Subjective assessments by tower personnel and pilots indicate that a yellow/black check pattern has no advantages for recognition. A scale model was used to test other color/pattern combinations and the effect of a marker beacon on the tower. Results show that: (a) visibility is improved by lights of 5 million cd, while higher values cause uncomfortable glare; (b) towers should be painted black; and (c) approach route must be clearly marked. However, tower staff fear that these measures will increase danger by making them too obvious a 'target', especially in poor visibility. Author (ESA)

### CYBERNETICS AND CAR DRIVING: A MATHEMATICAL (COMPUTER) MODEL FOR THE SYSTEM TO BE CONTROLLED

G. J. Blaauw 1980 27 p refs
(IZF-1980-4; TDCK-75004) Avail: NTIS HC A03/MF A01

A mathematical representation of the system controlled by a car driver is presented. This system is defined by combinations of lateral and longitudinal vehicle dynamics, course following, and the execution of an arbitrary additional task. A linearized model is developed and implemented in subroutines on a digital computer. The model based on control theory uses state vector notation. The description results in a six-dimensional state vector and involves three lead variables (course of the road, velocity of the lead car and the stimulus of the additional task) and one disturbance variable (side-wind gusts or road irregularities). The routines calculate future values for the course of the road and the velocity of the lead car in order to make anticipation possible by the driver. Driver's actions are modeled by the position of the accelerator, the brake force and the steering wheel angle. Several routines are extended with additional procedures to allow for an independent use in other applications. For example, the mathematical representation of the vehicle dynamics is extended with nonlinear equations to cover the complete range of variables and can be used in specific studies of the effects of vehicle parameters. Author (ESA)

### CYBERNETICS AND CAR DRIVING: A DRIVER MODEL AND ITS EXPERIMENTAL VALIDATION

G. J. Blaauw 1980 15 p refs
(IZF-1980-13; TDCK-75012) Avail: NTIS HC A02/MF A01

A linearized mathematical model which describes and predicts driver behavior is introduced. The internal representation consists of an estimation of the state vector describing the system to be controlled. The supervisory structure of the driver is studied by considering lateral and longitudinal control, combined with variations in bandwidth and energy of the lead variables. Car following and course following are included so that driver anticipation can be modeled by the observation of future values of the course of the road and the lead car velocity. A lead variable for the stimulus of an additional task can be included. Model validity is demonstrated by analyzing the effects of variables.

(driving experience, system disturbances, etc.) on the model parameters. Author (ESA)

### LEVELS OF STEERING CONTROL: REPRODUCTION OF STEERING WHEEL MOVEMENTS

J. Godthelp 1980 36 p refs
(IZF-1980-16; TDCK-75014) Avail: NTIS HC A03/MF A01

A schematic description of the driving control process using levels of control, i.e., precognitive, pursuit, and compensatory, is presented. The efficiency of the higher levels of control depends on the accuracy of internal information (knowledge of the road, the car, etc.) plus proprioceptive feedback. The sensitivity of the proprioceptive system was analyzed by measuring subjects' accuracy when asked to reproduce steering wheel positions without visual feedback. For discrete positions, standard deviation increases with steering wheel angle amplitude. However, relative errors are greatest with small angles. Steering force reduces the variation in reproduction. For continuous movements, reproductions are less accurate with low movement velocity than for the discrete positions. An additional velocity overshoot occurs. Rapid movements show higher positioning accuracy than slow. Author (ESA)

### CYBERNETICS AND CAR DRIVING: PERSPECTIVE PERCEPTION AND THE OUTPUT VECTOR OF THE SYSTEM TO BE CONTROLLED

G. J. Blaauw 1980 22 p refs
(IZF-1980-19; TDCK-75008) Avail: NTIS HC A02/MF A01

A sensitivity analysis for the perspective perception of lateral position variations during course following and distance variations during car following is covered. Variations in the curvature of the road followed are also considered via a perspective transformation. The sensitivities are derived for the development of a cybernetical model to describe and predict driver behavior quantitatively. The curvature variations are related to the most substantial element of the lead vector. The sensitivity for lateral position variations distinguishes between guidance features (lane markers, postmounted delineators, public lighting, etc.). The sensitivities for distance variations are related to the angular perception of the lead car dimensions and the road interval between lead car and own vehicle. The derived transformation equations are combined into one display equation which represents the transformation of the variables involved in the system to be controlled and models the output vector of that system as input information for the driver. Author (ESA)

### THE EFFICIENCY OF DETECTING TRIBAR PATTERNS MODULATED IN RANDOM DOT DENSITY

R. T. Flaherty (Night Vision and Electro-Optics Labs.) and A. VanMeeteren 1980 15 p refs
(IZF-1980-25; TDCK-75020) Avail: NTIS HC A02/MF A01

The ability of the visual system to resolve detail, and to integrate information over area in threshold measurements with tribar targets is examined. Frequency-of-seeing curves were measured for the detection of tribar patterns modulated in the density of computer generated random dot distributions. Comparison of actual and ideal results shows that the visual system uses only 22% of the available information in detecting tribar targets. For long presentation times of 1 sec no difference in efficiency is found for targets of 1 deg X 1 deg and 10 deg X 10 deg. However, for short presentation times of 0.2 sec, the efficiency is about 40% lower for the 10 deg targets. This suggests that the field of view for pattern integration in one glimpse is smaller than 10 deg X 10 deg. Contrast sensitivity functions measured with tribar targets comprise a component for spatial integration inversely proportional to spatial frequency. Author (ESA)

### REVIEW OF HUMAN AND OPERATIONAL FACTORS AFFECTING THE FEASIBILITY OF THE SEE-AND-AVOID CONCEPT

Otto Weber May 1981 82 p refs
(DFVLR-Mitt-81-13) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 12,30

Theoretical analysis and flight test assessements of the see-and-avoid concept of accident prevention are discussed. The international definition of visibility is supplemented by maximum detection range (MDR) and horizontal standard visibility (HSV). The MDR is always significantly lower than the HSV. Representations from design eye reference points show that cockpit visibility is often poor, especially for light, and small jet, aircraft when flying a horizontal turn. The introduction of speed dependent visual flight regulations is recommended. Author (ESA)

### CLOSE-RANGE CINE-PHOTOGRAMMETRY: A GENERALIZED TECHNIQUE FOR QUANTIFYING GROSS HUMAN MOTION Ph.D. Thesis

James Stephen Walton 1981 648 p
Avail: Univ. Microfilms Order No. 8120471

New cinematographic techniques for performing two and three dimensional analyses are described. Transformations between object coordinates and image coordinates were developed. The techniques are similar to those employed in analytical photogrammetry. Applications of the generalized three dimensional technique require information from a minimum of two distinct views. Applications of the generalized planar technique can e made using information from a single camera. A refined version of the generalized three dimensional technique is also described. This corrects for lens distortions and linear film deformations. It is shown that, using object distances of approximately 35 feet, the center of a golf ball can be located to within .1 inch of its true, three dimensional location. The acceleration of the center of mass of a spinning, yet freely falling trampolinist is determined and compared with the acceleration due to gravity. Dissert. Abstr.

### AN INVESTIGATION INTO PILOT AND SYSTEM RESPONSE TO CRITICAL IN-FLIGHT EVENTS. VOLUME 1: EXECUTIVE SUMMARY Final Report

Thomas H. Rockwell and Walter C. Griffin [1981] 199 p refs
(Contracts NAS2-10047; NAG2-75)
(NASA-CR-164993) Avail: NTIS HC A09/MF A01 CSCL 05H

Critical in-flight events (CIFE) that threaten the aircraft were studied. The scope of the CIFE was described and defined with emphasis on characterizing event development, detection and assessment; pilot information requirements, sources, acquisition, and interpretation, pilot response options, decision processed, and decision implemetation and event outcome. Detailed scenarios were developed for use in simulators and paper and pencil testing for developing relationships between pilot performance and background information as well as for an analysis of pilot reaction decision and feedback processes. Statistical relationships among pilot characteristics and observed responses to CIFE's were developed. R.J.F.

(AD-A104933; STI-TR-1146-1) Avail: NTIS HC A04/MF A01 CSCL 06/6

An interactive computer program (BIODYN-80) for solving the dynamic motion response of seated aircrew (pilots or equipment operators) working in a biodynamic environment (such as vibration or changing levels of acceleration in aircraft, surface vehicles, or motion simulators) is described. The multi-degree-of-freedom, lumped-parameter model includes elements for: pelvis, torso, neck, head, eyes, upper and lower arms, hand-grip and control stick (center-stick with arm rest). The nonlinear equations of motion of the body's main elements are linearized about a general set of body-limb-head postures, ranging from prone, to erect, to supine. Typical parameter ranges and sources are given, along with two 'typical' sets: a seated-pilot with center-stick, and a seated produce biomechanical transmissability files needed for use in the Air Force's PIVIB program for tracking performance estimation. Procedures and examples are given for both a Cyber 175 version and a PDP-10 version. GRA

Avail: NTIS HC A11/MF A01

The effects of technological development, defined as automation, on the nature and quality of human work in industrial process control systems and computer systems were investigated. Twenty four man machine systems with different degrees of automation and complexity were compared for characteristics of technical, organizational and individual tasks. It is noted that sharing of tasks between man and machine is more unfavorable at higher levels of automation. The operator's abilities are only occasionally utilized and the opportunity to do meaningful work is limited. Teamwork is more positive, but it llimits the individual operator's autonomy, even more in highly automated systems. In administrative computer systems, the routine nature of the work and its rigid procedures are considered negative. A clear correlation is found between these problems, job satisfaction and sickness rate. Author (ESA)

Avail: NTIS HC A10/MF A01

The utility of a workload assessment device to measure pilot workload for approach and landing formats and control stability variations was tested in in a modified NT-33 research aircraft.

The feasibility of using an item-recognition task as a measure of sensory-response loading and reserve information processing capacity while flying precision approaches was established. Statistical treatment of the data indicates an appreciable increase in reaction time and errors with degraded handling qualities as compared to ground baseline measures and good handling qualities. The preliminary findings also reveal consistent trends toward the availability of more mental reserve capacity when flying predominantly pictorial/symbolic HUD configurations as compared to conventional HUD formats with scales and alphanumerics. **ANALYTICAL DETECTION OF ORGANIC SPECIES BY MEANS OF LASER-INDUCED MULTIPHOTON IONIZATION Ph.D. Thesis**
Richard Kenneth Simon, Jr. 1980 189 p
Avail: Univ. Microfilms Order No. 8122036

Multiphoton ionization (MP) is spectrometric technique which was developed for the the analysis of trace amounts of both atomic and molecules species. The methods is based on two or more photons being absorbed by the the analyte which results in the analyte being ionized. The intense photoexcitation of the analysis is achieved by focussing the output of a pulsed tunable dye laser in an ionization chamber. The ionization chamber serves as the analyte reservoir and allows detection of the resulting MP1 current pulse. The non-optical nature of the signal detection makes MP1 a novelspectroscopic technique: no optical collection, dispersion, and/or detection is required; scattered and stray light are irrelevant; vacuum ultraviolet spectroscopy in air possible without special optics. Dissert. Abstr.

Progress is reported in a project in which the objectives are to evaluate benefits associated with control of the surface energetic properties of materials used in heat exchangers, and to identify preferred ranges of these surface conditions that minimize deposits of biological fouling known to deteriorate heat exchange efficiencis in seawater, brackish water and freshwater systems. The technical approach employed uses special diagnostic plates in novel flow cells where fluid flow conditions can be well-controlled, modifying the surface chemistry and surface energy of the plates with very thin coatings and examining the earliest events of biofouling caused by macromolecules and microbial organisms. Information is included on exposure experiments and results and heat exchange experiments. DOE

**SUPERCONDUCTING MAGNETOMETRY FOR CARDIOVASCULAR STUDIES AND AN APPLICATION OF ADAPTIVE FILTERING Ph.D. Thesis**
Mark Curtis Leifer 1981 174 p
Avail: Univ. Microfilms Order No. 8124101

Sensitive magnetic detectors utilizing Superconducting Quantum interference Devices, studying the cardiovascular system were developed. The theory of magnetic detection of cardiac currents is discussed, and experimental data supporting the validity of the theory is presented. Measurements on both humans and dogs, in both healthy and diseased states, are presented using the technique, which is termed vector magnetocardiography. Performance of the actual device displays significantly improved sensitivity in this frequency range, and the ability to measure currents in intact, in vivo biological fibers. The theoretical operation of a digital self-optimizing filter is reviewed and a four-channel software implementation of the system is presented. The application of the adaptive filter to enhancement of geomagnetic signals for earthquake forecasting is discussed, and the adaptive filter is shown to outperform existing techniques in suppressing noise from geomagnetic records. Dissert. Abstr.

**NEUROTRANSMITTER FUNCTION IN THE BASAL GANGLIA AFTER ACUTE AND CHRONIC ETHANOL TREATMENT**
Walter A. Hunt Jul. 1981 10 p refs
(AD-A103744; AFRRI-SR81-19) Avail: NTIS HC A02/MF A01 CSCL 06/15

Acute and chronic administration of ethanol has multiple effects on several neurotransmitters in the basal ganglia. Dopamine is the transmitter predominantly affected. Acceleration of dopaminergic activity is observed at low doses of ethanol. However, at high doses the reverse is observed. During the ethanol withdrawal syndrome that develops after chronic treatment, dopaminergic responses are reduced, whether from presynaptic or postsynaptic origins. Ethanol induces a variety of alterations in neurotransmitter function as a result of its disruption of membrane structure and associated electrical properties. GRA

**DETERMINATION OF EFFICIENT METHODS OF LIFT BY COMPARING TRAINED AND UNTRAINED MALE AND FEMALE LIFTERS Final Report**
Richard H. Shannon 3 Dec. 1980 141 p refs
(AD-A100349; NBDL-M004) Avail: NTIS HC A07/MF A01 CSCL 06/14

The effects of sex and training variables during nonrepetitive, short duration lifts in the sagittal plane were analyzed. One half of each sex subsample was part of a lifting training program, while the other half was used as a control group. The effects of body movements by these subjects in the height ranges from the floor to the knuckle and the knuckle to the shoulder were ascertained with 10, 25, 40 pound weight loads. Muscular strain, stroboscopic photography to calculate differences in displacement time vectors, and the force platform to specify force changes at the feet were determined. The various statistical techniques applied were: factor analysis, regression analysis, analysis of variance, t-test and nonparametric statistics. The results are a five factor biomechanical model, regression equations predicting inertial forces at the hands, and significant differences between the untrained and trained conditions, and males and females. It is concluded that manual handling training programs are necessary in the work environment if women are expected to lift loads of approximately 40 pounds. Author

**INFLUENCE OF SINE, AND RANDOM, WHOLE-BODY VIBRATION ON VISUAL ACUITY [EINFLUSS SINUSFOERMIGER UND REGELLOSER GANZKOERPERSCHWINGUNGEN AUF DIE VISUELLE INFORMATIONSAUFNAHME]**
Norbert May Bonn Bundesministerium der Verteidigung 1979 101 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-79-17) Avail: NTIS HC A06/MF A01; DOKZENTBw, Bonn DM 30

The far, visual acuity of people subjected to vertical whole-body vibration (different vibration types and loads) was tested. A total of 110 subjects of both sexes, either exposed to sine vibration in the range from 2 to 18 cycles/sec or to random vibrations in the same frequency range, participated. The rms accelerations on the heads of subjects were 0.17, 0.2 and 0.43 m/sec squared. The subjects sat erect on an uncushioned seat, mounted on a hydromechanical vibration apparatus. Results show that relative visual acuity diminishes with sine vibrations while increasing frequency and/or accelerations (from 6% minimum to 37.5 % maximum of visual acuity under static conditions). With random vibrations there is also an acuity decrease although smaller, while increasing the vibration frequency as well as with increasing acceleration load. Author (ESA)

**THE MEASUREMENTS OF FLUID SHIFTS AND OF THE TISSUE COMPLIANCE ALONG BODY AXIS IN MAN Final Report**

Karl Kirsch Bonn Bundesministerium fuer Forschung und Technologie Sep. 1980 41 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-80-011; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 8,60

Tissue volume changes on different parts of the body were simultaneously measured by ultrasonic techniques in order to monitor the shift of fluid volumes along the body axis. Once fully established, the method could be used for measuring the shift of blood and interstitial fluid from the lower to the cephalic part of the body, occurring under zero-gravity conditions. Proof of principle tests were carried out under orthostatis, immersion and heat exposure conditions were confirmed by post mortem comparisons. By mounting the measuring probe in an airtight chamber, the tissue complience C = dV/dP was also determined. The results found are consistent with previous investigations and with clinical tests. Application in space and as a circulation diagnostic method is advocated. Author (ESA)

**LINGUISTIC AND HUMAN PERFORMANCE CONSIDERATIONS IN THE DESIGN OF AN ANTICIPATORY COMMUNICATION AID Ph.D. Thesis**

Clinton David Gibler 1981 365 p
Avail: Univ. Microfilms Order No. 8124891

A communication aid is a device that assists a disabled person with the generation of messages. A scanning aid presents language elements (e.g.) letters, words) in a sequential fashion to accommodate those whose disability does not permit the direct selection of language elements. Anticipatory methods utilize statistical characteristics of language to shorten the average sequential access time to each language element. The study is restricted to those aids having the capacity for English text generation. The research yielded two developments: a small, general purpose dictionary that accounts for a high percentage of a person's vocabulary; and a human performance model that accurately predicts communication rates for the transcription task, given basic human performance data about the user. Dissert. Abstr.

**A SYSTEMS ANALYSIS OF THE MATURATION OF SLEEP USING A SEMI-MARKOV MODEL Ph.D. Thesis**

Thomas Raymond Bowe 1981 122 p
Avail: Univ. Microfilms Order No. 8124040

An approach to analyze the sleep process in human infants is presented. In particular it formulates phase varying semi-Markov models for infants at 2, 4, 8, 20, 24, 36, and 52 weeks of age. The Bayesian estimation procedure employed allows the uncertainty in the estimated parameters to be quantitized. The parameters of the models represent the basic building blocks of the sleep process and can be used to predict any statistic of interest. The models were used to investigate the rhythmic nature of the sleep process. The concept that sleep develops a periodic tendency was mathematically investigated and defined. Dissert. Abstr.

**DEPOSITION OF AEROSOL PARTICLES IN THE HUMAN RESPIRATORY TRACT Ph.D. Thesis**

Shii-Pyng Shiah 1981 192 p
Avail: Univ. Microfilms Order No. 8123939

The dispersion and deposition of aerosol particles in human lungs are investigated. The development of a three dimensional airway model, the dispersion of half micrometer particles in the respiratory tract, and deposition of aerosol particles in the respiratory tract are studied. A model of the upper tracheobronchial tree is constructed to account for the three dimensional nature of the airway system. A mathematical model is developed for predicting the percentage of inhaled hygrocopic particles which deposit in each generation of the repeatedly bifurcating tubes in an airway tree. A theoretical model of aerosol dispersion in the human lungs is extended to the alveolated regions by considering the expansion and contraction of the alveoli. The percentage of inhaled paticles which deposit in each generation of tubes is calculated for all generations reached by the inhaled aerosols. Dissert. Abstr.

**DYNAMIC MEASUREMENT OF HUMAN VERTICAL FUSIONAL RESPONSE Ph.D. Thesis**

Arye Lipa Perlmutter 1981 88 p
Avail: Univ. Microfilms Order No. 8124975

The response was studied in order to explore the relationship between its sensory and motor components. Two SRI Double Purkinje Image Eyetrackers were used for binocular recordings of eye movements in response to the presentations of vertical disparities. The binocular coordination of vertical fusional responses were studied through the presentations of asymmetrical disparities as well as predictable and unpredictable symmetrical sinusoidal disparities. The motor response to asymmetrical disparity presentation is found to be incomplete, thus allowing for the existence of a significant sensory component. When ramp disparities were presented only the eye whose monocular image moved followed the stimulus closely while the other eye did not move or moved by a small amount. Dissert. Abstr.

**ALGORITHMS FOR IMAGING MYOCARDIAL BLOOD FLOW USING X-RAY COMPUTED TOMOGRAPHY Ph.D. Thesis**

Menahem Nassi-F 1981 136 p
Avail: Univ. Microfilms Order No. 8124117

Algorithms are proposed to remove degradation of contrast and spatial resolution produced by the motion of the heart in X-ray computed tomography. A mathematical model is derived for regional myocardial blood flow (RMBF) estimation which uses a classical, deterministic formulation to describe tracer dynamics in the myocardium. Based upon the perfect mixing assumption, this theory removes the requirement for intra-arterial bolus injection of tracer (diatrizoate radiographic contrast). Regional partition coefficients are estimated, which render absolute RMBF estimates [ml/(min x gr)]. The requirement for curve extrapolation (zeroth and first moment computation) in the presence of recirculation, and the considerable measurement noise which is unaccounted for, are both removed by the proposed alternative stochastic formulation. Dissert. Abstr.

**VISUAL/MOTION CUE MISMATCH IN A COORDINATED ROLL MANEUVER**
Douglas K. Shirachi and Richard S. Shirley May 1981 51 p
(Contract NAS2-9741)
(NASA-CR-166259; CSCR-8) Avail: NTIS HC A04/MF A01 CSCL 05H

The effects of bandwidth differences between visual and motion cueing systems on pilot performance for a coordinated roll task were investigated. Visual and motion cue configurations which were acceptable and the effects of reduced motion cue scaling on pilot performance were studied to determine the scale reduction threshold for which pilot performance was significantly different from full scale pilot performance. It is concluded that: (1) the presence or absence of high frequency error information in the visual and/or motion display systems significantly affects pilot performance; and (2) the attenuation of motion scaling while maintaining other display dynamic characteristics constant, affects pilot performance. E.A.K.

**THE COGNITIVE DEMANDS OF SECOND ORDER MANUAL CONTROL: APPLICATIONS OF THE EVENT RELATED BRAIN POTENTIAL**
Christophor Wickens, Richard Gill, Arthur Kramer, William Ross, and Emanuel Donchin *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 7-16 refs

(Contract F49620-79-C-0233)
Avail: NTIS HC A99/MF A01 CSCL 05H

Three experiments are described in which tracking difficulty is varied in the presence of a covert tone discrimination task. Event related brain potentials (ERPs) elicited by the tones are employed as an index of the resource demands of tracking. The ERP measure reflected the control order variation, and this variable was thereby assumed to compete for perceptual/central processing resources. A fine-grained analysis of the results suggested that the primary demands of second order tracking involve the central processing operations of maintaining a more complex internal model of the dynamic system, rather than the perceptual demands of higher derivative perception. Experiment 3 varied tracking bandwidth in random input tracking, and the ERP was unaffected. Bandwidth was then inferred to compete for response-related processing resources that are independent of the ERP. J.D.H.

**A STUDY ON TASK DIFFICULTY AND ACCELERATION STRESS**
D. W. Repperger and D. B. Rogers *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 17-31 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

The results of two experiments which relate to task difficulty and the effects of environmental stress on tracking performance are discussed and compared to subjective evaluations. The first experiment involved five different sum of sine tracking tasks which humans tracked both in a static condition and under a 5 Gz acceleration stress condition. The second experiment involved similar environmental stress conditions but in this case the tasks were constructed from deterministic functions with specially designed velocity and acceleration profiles. Phase Plane performance analysis was conducted to study potential measures of workload or tracking difficulty. J.D.H.

**N82-13669*#** National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
**SUBJECTIVE RATING SCALES AS A WORKLOAD**
Kathleen L. Bird (Virginia Polytechnic Inst. and State Univ.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 33-39 refs

(Contract NAG1-217)
Avail: NTIS HC A99/MF A01 CSCL 05H

A multidimensional bipolar-adjective rating scale is employed as a subjective measure of operator workload in the performance of a one-axis tracking task. The rating scale addressed several dimensions of workload, including cognitive, physical, and perceptual task loading as well as fatigue and stress effects. Eight subjects performed a one-axis tracking task (with six levels of difficulty) and rated these tasks on several workload dimensions. Performance measures were tracking error RMS (root-mean square) and the standard deviation of control stick output. Significant relationships were observed between these performance measures and skill required, task complexity, attention level, task difficulty, task demands, and stress level. Author

**PHYSIOLOGICAL ASSESSMENT OF OPERATOR WORKLOAD DURING MANUAL TRACKING. 1: PUPILLARY RESPONSES**
Quiyan Jiang, Raja Parasuraman, and Jackson Beatty *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 41-48 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

The feasibility of pupillometry as an indicator for assessing operator workload during manual tracking was studied. The mean and maximum pupillary responses of 12 subjects performing tracking tasks with three levels of difficulty (bandwidth of the forcing function were 0.15, 0.30 and 0.50 Hz respectively) were analysed. The results showed that pupillary dilation increased significantly as a function of the tracking difficulty which was reflected by the significant increase of tracking error (RMS). The present study supplies additional evidence that pupillary response is a sensitive and reliable index which may serve as an indicator for assessing operator workload in man-machine systems. Author

**HORIZONTAL CONFLICT RESOLUTION MANEUVERS WITH A COCKPIT DISPLAY OF TRAFFIC INFORMATION**
Evertt Palmer, Sharon Jago, and Myrna DuBord *In* JPL Proc. of the 17th Ann. Conf. on Manual control 15 Oct. 1981 p 51-62 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

Pilot resolution of potential conflicts in the horizontal plane when the only information available on the other aircraft was presented on a Cockpit Display of Traffic Information (CDTI) is investigated. The pilot's task was to assess the situation and if necessary maneuver so as to avoid the other aircraft. No instructions were given on evasive strategy or on what was considered to be an acceptable minimum separation. The results indicate that pilots had a strong bias of turning toward the intruder aircraft in order to pass behind it. In more than 50% of the encounters with a 90 degree crossing angle in which the intruder aircraft was programmed to pass behind the aircraft, the pilots maneuvered so as to pass behind the intruder. This bias was not as strong with the display which showed a prediction of the intruder's relative velocity. The average miss distance for all encounters was about 4500 feet. J.D.H.

**SOME EFFECTS OF FIELD OF VIEW (FOV) AND TARGET SIZE ON LATERAL TRACKING AT HOVER**
Henry T. Breul *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 63-75 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

An exploratory flight-simulator experiment examined the gross effects of several factors potentially important to the design of a visual display system for aiding VTOL pilots in the difficult task of landing on a small sea-control ship. Field of view (FOV) and target size were the primary variables examined for a lateral tracking task in a full motion 5 degree-of-freedom hover simulation. The mean absolute value of tracking error was used to measure tracking performance, and cross spectral transfer function analysis was performed to determine the pilot's ability to generate good open-loop transfer function characteristics as a function of the experimental variables. It was found that FOV and target size can have a large effect on the pilot's ability to generate open-loop gain, and on his tracking performance. J.D.H.

**VIDEO FRAMERATE, RESOLUTION AND GRAYSCALE TRADEOFFS FOR UNDERSEA TELEMANIPULATOR**
Vivek Ranadive and Thomas B. Sheridan *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 77-88 refs Prepared in cooperation with MIT, Cambridge

Avail: NTIS HC A99/MF A01 CSCL 05H

The product of Frame Rate (F) in frames per second, Resolution (R) in total pixels and grayscale in bits (G) equals the transmission band rate in bits per second. Thus for a fixed channel capacity there are tradeoffs between F, R and G in the actual sampling of the picture for a particular manual control task in the present case remote undersea manipulation. A manipulator was used in the MASTER/SLAVE mode to study these tradeoffs. Images were systematically degraded from 28 frames per second, 128 x 128 pixels and 16 levels (4 bits) grayscale, with various FRG combinations constructed from a real-time digitized (charge-injection) video camera. It was found that frame rate, resolution and grayscale could be independently reduced without preventing the operator from accomplishing his/her task. Threshold points were found beyond which degradation would prevent any successful performance. A general conclusion is that a well trained operator can perform familiar remote manipulator tasks with a considerably degrade picture, down to 50 K bits/ sec. J.D.H.

**PREDICTOR SYMBOLOGY IN COMPUTER-GENERATED PERSPECTIVE DISPLAYS**
Arthur J. Grunwald *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 89-94 ref

(Contract NASw-3302)
Avail: NTIS HC A99/MF A01 CSCL 05H

An advanced diplay format for the four dimensional commercial aircraft approach-to-landing is evaluated. The desired curved and descending approach path is presented by displaying the perspective image of a tunnel. Attention is focussed on the predictor symbology, superimposed on the tunnel image. A perspective three dimensional predictor symbol, providing future position, as well as future attitude information, is compared with a flat two dimensional version, which only provides the future position. In addition to this, the predictor displays the actual airspeed as well as the desired airspeed, prescribed by the four dimensional path. Results show that the three dimensional predictor symbol outperforms the two dimensional predictor in following the trajectory in a moderate-to-heavy turbulent environment, which is manifested in accurate manual true airspeed control was obtained without affecting the main task performance significantly. **RESEARCH ISSUES IN IMPLEMENTING REMOTE PRESENCE IN TELEOPERATOR CONTROL**
Kevin Corker, Andrew H. Mishkin, and John Lyman *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 109-126 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

The concept of remote presence in telomanipulation is presented. A conceptual design of a prototype teleoperator system incorporating remote presence is described. The design is presented in functional terms, sensor, display, and control subsystem. An intermediate environment, in which the human operator is made to feel present, is explicated. The intermediate environment differs from the task environment due to the quantity and type of information presented to an operator and due to scaling factors protecting the operator from the hazards of the task environment. Potential benefits of remote presence systems, both for manipulation and for the study of human cognition and preception are discussed. E.A.K.

**THE PERSISTENCE OF A VISUAL DOMINANCE EFFECT IN A TELEMANIPULATOR TASK: A COMPARISON BETWEEN VISUAL AND ELECTROTACTILE FEEDBACK**
J. P. Gaillard *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 127-138 refs Sponsored in part by Direction de la Recherche des Equipements Techniques

Avail: NTIS HC A99/MF A01 CSCL 05H

The possibility to use an electrotactile stimulation in teleoperation and to observe the interpretation of such information as a feedback to the operator was investigated. It is proposed that visual feedback is more informative than an electrotactile one; and that complex electrotactile feedback slows down both the motor decision and motor response processes, is processed as an all or nothing signal, and bypasses the receptive structure and accesses directly in a working memory where information is sequentially processed and where memory is limited in treatment capacity. The electrotactile stimulation is used as an alerting signal. It is suggested that the visual dominance effect is the result of the advantage of both a transfer function and a sensory memory register where information is pretreated and memorized for a short time. It is found that dividing attention has an effect on the acquisition of the information but not on the subsequent decision processes. E.A.K.

Operator perceptual cognitive styles as predictors of remote task performance were identified. Remote tasks which require the use of servo controlled master/slave manipulators and closed circuit television for teleoperator repair and maintenance of nuclear fuel recycling systems are examined. A useful procedure for identifying such perceptual styles is described. E.A.K.

**SIMPLE GEOMETRIC ALGORITHMS TO AID IN CLEARANCE MANAGEMENT FOR ROBOTIC MECHANISMS**

E. L. Copeland, L. D. Ray, and J. D. Peticolas *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 149-155

Avail: NTIS HC A99/MF A01 CSCL 05H

Global geometric shapes such as lines, planes, circles, spheres, cylinders, and the associated computational algorithms which provide relatively inexpensive estimates of minimum spatial clearance for safe operations were selected. The Space Shuttle, remote manipulator system, and the Power Extension Package are used as an example. Robotic mechanisms operate in quarters limited by external structures and the problem of clearance is often of considerable interest. Safe clearance management is simple and suited to real time calculation, whereas contact prediction requires more precision, sophistication, and computational overhead. E.A.K.

**THE INFLUENCE OF MOTION CUES ON DRIVER-VEHICLE PERFORMANCE IN A SIMULATOR**

Brian S. Repa, Philip M. Leucht, and Walter W. Wierwille (Virginia Polytechnic Inst. and State Univ.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 157-169 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

Four different motion base configurations were studied on driving simulator. Differently responding vehicles were simulated on each motion configurations and the effects of the vehicle characteristics on driver vehicle system performance, driver control activity, and driver opinion ratings of vehicle performance during driving are compared for different motion configurations. Data show that: (1)) the effects of changes in vehicle characteristics on the different objective and subjective measures of driver vehicle performance are not disguised by the lack of physical motion; (2) fixed base simulator can be used to draw inferences despite the lack of motion; (3) the presence of motion tends to reduce path keeping errors and driver control activity; (4) roll and yaw motions are recommended because of their marked influence on driver vehicle performance (5) the importance of motion increases as the driving maneuvers become more extreme. E.A.K.

**MULTIPLE MAN-MACHINE INTERFACES**

Lillian Stanton and Creighton W. Cook *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 171-186 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

The multiple man machine interfaces inherent in military pilot training, their social implications, and the issue of possible negative feedback were explored. Modern technology has produced machines which can see, hear, and touch with greater accuracy and precision than human beings. Consequently, the military pilot is more a systems manager, often doing battle against a target he never sees. It is concluded that unquantifiable human activity requires motivation that is not intrinsic in a machine. E.A.K.

**DECISION AIDS FOR AIRBORNE INTERCEPT OPERATIONS IN ADVANCED AIRCRAFTS**

Azad Madni and Amos Freedy *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 187-209 refs

(Contract N62269-79-C-0496)

Avail: NTIS HC A99/MF A01 CSCL 05H

A tactical decision aid (TDA) for the F-14 aircrew, i.e., the naval flight officer and pilot, in conducting a multitarget attack during the performance of a Combat Air Patrol (CAP) role is presented. The TDA employs hierarchical multiattribute utility models for characterizing mission objectives in operationally measurable terms, rule based AI-models for tactical posture selection, and fast time simulation for maneuver consequence prediction. The TDA makes aspect maneuver recommendations, selects and displays the optimum mission posture, evaluates attackable and potentially attackable subsets, and recommends the 'best' attackable subset along with the required course perturbation. E.A.K.

**USING REWARDS AND PENALTIES TO OBTAIN DESIRED SUBJECT PERFORMANCE**

Marcia Cook, Henry R. Jex, Anthony C. Stein, and R. Wade Allen *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Dec. 1981 p 211-222 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

Operant conditioning procedures, specifically the use of negative reinforcement, in achieving stable learning behavior is described. The critical tracking test (CTT) a method of detecting human operator impairment was tested. A pass level is set for each subject, based on that subject's asymptotic skill level while sober. It is critical that complete training take place before the individualized pass level is set in order that the impairment can be detected. The results provide a more general basis for the application of reward/penalty structures in manual control research. E.A.K.

**A COMPARISON OF LANDING MANEUVER PILOTING TECHNIQUE BASED ON MEASUREMENTS MADE IN AN AIRLINE TRAINING SIMULATOR AND IN ACTUAL FLIGHT**

Robert K. Heffley and Ted M. Schulman *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 223-234 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

An emphasis is placed on developing a mathematical model in order to identify useful metrics, quantify piloting technique, and define simulator fidelity. On the basis of DC-10 flight measurements recorded for 32 pilots, 13 flight-trained and the remainder simulator trained, a revised model of the landing flare is hypothesized which accounts for reduction of sink rate and perference for touchdown point along the runway. The flare maneuver and touchdown point adjustment can be described by a pitch attitude command pilot guidance law consisting of attitude and vertical velocity feedbacks. In flight pilots exhibit a significant vertical velocity feedback which is essential for well controlled sink rate reduction at the desired level of response (bandwidth). In the simulator, however, the vertical velocity feedback appears ineffectual and leads to substantially inferior landing performance. T.M.

**IDENTIFICATION OF MULTILOOP PILOT DESCRIBING FUNCTIONS OBTAINED FROM SIMULATED APPROACHES TO AN AIRCRAFT CARRIER**
Wayne F. Jewell *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 239-244 refs

Avail: NTIS HC A99/MF A01 CSCL 05H
Predicted results of a simulation of the pilot's approach control strategy in the presence of pilot remnant are presented. The aircraft dynamics and the turbulence environment are representative of a trainer-type aircraft. The non-intrusive pilot identification program (NIPIP) was used to identify the pilot's control strategy required by this highly-coupled, multiloop control task. The results are presented in terms of frequency responses of the individual elements of the pilot's control strategy and indicate that NIPIP can identify the pilot's describing functions even in the presence of significant amounts of pilot remnant. T.M.

**FURTHER TESTS OF A MODEL-BASED SCHEME FOR PREDICTING PILOT OPINION RATINGS FOR LARGE COMMERCIAL TRANSPORTS**
W. W. Rickard and W. H. Levison (Bolt, Beranek and Newman, Inc., Cambridge, Mass.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 245-254 refs

Avail: NTIS HC A99/MF A01 CSCL 05H
A methodology was demonstrated for assessing longitudinal-axis handling qualities of transport aircraft on the basis of closed-loop criteria. Six longitudinal-axis approach configurations were studied covering a range of handling quality problems that included the presence of flexible aircraft modes. Using closed-loop performance requirements derived from task analyses and pilot interviews, predictions of performance/workload tradeoffs were obtained using an analytical pilot/vehicle model. A subsequent manned simulation study yielded objective performance measures and Cooper-Harper pilot ratings that were largely consistent with each other and with analytic predictions. T.M.

**AN ANALYTICAL APPROACH FOR PREDICTING PILOT INDUCED OSCILLATIONS**
Ronald A. Hess *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 255-269 refs

Avail: NTIS HC A99/MF A01 CSCL 05H
The optimal control model (OCM) of the human pilot is applied to the study of aircraft handling qualities. Attention is focused primarily on longitudinal tasks. The modeling technique differs from previous applications of the OCM in that considerable effort is expended in simplifying the pilot/vehicle analysis. After briefly reviewing the OCM, a technique for modeling the pilot controlling higher order systems is introduced. Following this, a simple criterion or determining the susceptability of an aircraft to pilot induced oscillations (PIO) is formulated. Finally, a model-based metric for pilot rating prediction is discussed. The resulting modeling procedure provides a relatively simple, yet unified approach to the study of a variety of handling qualities problems. T.M.

**N82-13689*#** Operations Research, Inc., Bethesda, Md.
**A MODEL FOR THE SUBMARINE DEPTHKEEPING TEAM**
John R. Ware, John F. Best, Pamela J. Bozzi, and David W. Kleinman (Connecticut Univ., Storrs) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 271-282 refs

Avail: NTIS HC A99/MF A01 CSCL 05H
The most difficult task the depthkeeping team must face occurs during periscope-depth operations during which they may be required to maintain a submarine several hundred feet long within a foot of ordered depth and within one-half degree of ordered pitch. The difficulty is compounded by the facts that wave generated forces are extremely high, depth and pitch signals are very noisy and submarine speed is such that overall dynamics are slow. A mathematical simulation of the depthkeeping team based on the optimal control models is described. A solution of the optimal team control problem with an output control restriction (limited display to each controller) is presented. T.M.

**MODELING OF THE AIRCRAFT IN-TRAIL-FOLLOWING TASK DURING PROFILE DESCENT**
T. Goka, J. A. Sorensen, and A. V. Phatak *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 283-294 refs
(Contract NAS1-16135)
Avail: NTIS HC A99/MF A01 CSCL 05H
The cockpit display of traffic information (CDTI) system concepts enable the pilot to observe the surrounding air traffic pattern. The impact of such a system is far reaching in terms of improved safety, pilot and controller workload, and aircraft fuel efficiency. One direct payoff is the ability to distribute the ATC workload to the pilot in such tasks as merging and spacing. The CDTI application of spacing approach aircraft in the terminal area is addressed. In-trail-following/CDTI experiments were performed using realistic cockpit simulators and profile descent approach scenarios. Based on collected experimental simulator data, pilot models were developed which include state estimation, decision making and flight control aspects. These models were coupled with models of aircraft and CDTI equipment to study the dynamic phenomena and stability of strings of aircraft along various approach patterns. T.M.

**COMPARISON OF CLOSED LOOP MODEL WITH FLIGHT TEST RESULTS**
Frank L. George *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 295-300 refs

Avail: NTIS HC A99/MF A01 CSCL 05H
An analytic technique capable of predicting the landing characteristics of proposed aircraft configurations in the early stages of design was developed. In this analysis, a linear pilot-aircraft closed loop model was evaluated using experimental data generated with the NT-33 variable stability in-flight simulator. The pilot dynamics are modeled as inner and outer servo loop closures around aircraft pitch attitude, and altitude rate-of-change respectively. The landing flare maneuver is of particular interest as recent experience with military and other highly augmented vehicles shows this task to be relatively demanding, and potentially a critical design point. A unique feature of the pilot model is the incorporation of an internal model of the pilot's desired flight path for the flare maneuver. T.M.

**INFORMATION AND DISPLAY REQUIREMENTS FOR AIRCRAFT TERRAIN FOLLOWING**

D. L. Kleinman and J. Korn (ALPHATECH, Inc., Burlington, Mass.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 329-331 refs

(Contract F33615-80-C-0528)
Avail: NTIS HC A99/MF A01 CSCL 05H

The display design procedure for manned vehicle systems, is applied and validated, for a particular scenario. The scenario chosen is that of zero visibility high speed terrain following (V = 466 ft/sec, H = 200 ft) with an A-10 aircraft. The longitudal (linearized) dynamics are considered. The variations in (command path over) terrain pi(t) are modeled as a third order random process. The display design methodology is based on the optimal control model of pilot response, and employs this model in various ways in different phases of the design process. The overall methodology indicates that the design process is intended as a precursor to manned simulation. It provides a rank ordering of candidate displays through a three level process. S.L.

**A DATA COLLECTION SCHEME FOR IDENTIFICATION OF PARAMETERS IN A DRIVER MODEL**

B. W. Mooring, M. McDermott, and Je-Mang Su *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 333-343 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

A high gain steering controller to compensate for limitations in a handicapped driver's range of motion is employed when adapting vehicle to his use. A driver/vehicle system can become unstable as vehicle speed is increased, therefore it is desirable to use a computer simulation of the driver/vehicle combination as a design tool to investigate the system response prior to construction of a controller and road testing. Unknown driver parameters must be identified prior to use of the model for system analysis. A means to collect the data necessary for identification of these driver model parameters without extensive instrumentation of a vehicle to measure and record vehicle states is addressed. Initial tests of the procedure identified all of the driver parameters with errors of 6% or less. S.L.

**TWO-D RESULTS ON HUMAN OPERATOR PERCEPTION**

Alex A. Siapkara (Hellenic Technology Center, Athens) and Thomas B. Sheridan *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 345-359 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

The application of multidimensional scaling methodology in human factors engineering is presented. The nonorthogonality of internally perceived task variables is exhibited for first and second order plants with both dependent and independent task variables. Directions of operator preference are shown for actual performance, pilot opinion rating, and subjective measures of fatigue, adaptability, and system recognition. Improvement of performance in second order systems is exhibited by the use of bang-bang feedback information. Dissimilarity measures for system comparison are suggested in order to account for human operator rotations and subjective sense of time. S.L.

**COMPUTATIONAL PROBLEMS IN AUTOREGRESSIVE MOVING AVERAGE (ARMA) MODELS**

Gyan C. Agarwal, Sharin M. Goodarzi, William D. ONeill, and Gerald L. Gottlieb *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 361-377 refs Prepared in cooperation with Rush Medical Center, Chicago

(Grants NSF ENG-76-08754; NS-12877)
Avail: NTIS HC A99/MF A01 CSCL 05H

The choice of the sampling interval and the selection of the order of the model in time series analysis are considered. Band limited (up to 15 Hz) random torque perturbations are applied to the human ankle joint. The applied torque input, the angular rotation output, and the electromyographic activity using surface electrodes from the extensor and flexor muscles of the ankle joint are recorded. Autoregressive moving average models are developed. A parameter constraining technique is applied to develop more reliable models. The asymptotic behavior of the system must be taken into account during parameter optimization to develop predictive models. S.L.

**N82-13699*#** ALPHATECH, Inc., Burlington, Mass.

**MODELING HUMAN TRACKING ERROR IN SEVERAL DIFFERENT ANTI-TANK SYSTEMS**

David L. Kleinman *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 379-392 refs Prepared in cooperation with Connecticut Univ., Storrs

(Contract DAAK11-80-C-0050)
Avail: NTIS HC A99/MF A01 CSCL 05H

An optimal control model for generating time histories of human tracking errors in antitank systems is outlined. Monte Carlo simulations of human operator responses for three Army antitank systems are compared. System/manipulator dependent data comparisons reflecting human operator limitations in perceiving displayed quantities and executing intended control motions are presented. Motor noise parameters are also discussed. M.D.K.

Avail: NTIS HC A99/MF A01 CSCL 05H

A literature search was carried out to examine the feasibility of a six degree of freedom hand controller. Factors addressed included related areas, approaches to manual control, applications of manual controllers, and selected studies of the human neuromuscular system. Results are presented. J.M.S.

**N82-13702*#** Messerschmidt-Boelkow G.m.b.H., Munich (West Germany).
**THEORETICAL LINEAR APPROACH TO THE COMBINED MAN-MANIPULATOR SYSTEM IN MANUAL CONTROL OF AN AIRCRAFT**
Klaus Brauser *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 407-418 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

An approach to the calculation of the dynamic characteristics of the combined man manipulator system in manual aircraft control was derived from a model of the neuromuscular system. This model combines the neuromuscular properties of man with the physical properties of the manipulator system which is introduced as pilot manipulator model into the manual aircraft control. The assumption of man as a quasilinear and time invariant control operator adapted to operating states, depending on the flight phases, of the control system gives rise to interesting solutions of the frequency domain transfer functions of both the man manipulator system and the closed loop pilot aircraft control system. It is shown that it is necessary to introduce the complete precision pilot manipulator model into the closed loop pilot aircraft transfer function in order to understand the well known handling quality criteria, and to derive these criteria directly from human operator properties. J.M.S.

**THE INFLUENCE OF SHIP MOTION OF MANUAL CONTROL SKILLS**
Peter McLeod, Christopher Poulton, Howard DuRoss (RAE, Farnborough, Engl.), and Wynn Lewis (WSL, Stevenage, Engl.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 419-430 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

The effects of ship motion on a range of typical manual control skills were examined on the Warren Spring ship motion simulator driven in heave, pitch, and roll by signals taken from the frigate HMS Avenger at 13 m/s (25 knots) into a force 4 wind. The motion produced a vertical r.m.s. acceleration of 0.024g, mostly between 0.1 and 0.3 Hz, with comparatively little pitch or roll. A task involving unsupported arm movements was seriously affected by the motion; a pursuit tracking task showed a reliable decrement although it was still performed reasonably well (pressure and free moving tracking controls were affected equally by the motion); a digit keying task requiring ballistic hand movements was unaffected. There was no evidence that these effects were caused by sea sickness. The differing response to motion of the different tasks, from virtual destruction to no effect, suggests that a major benefit could come from an attempt to design the man/control interface onboard ship around motion resistant tasks. Author

**THE ROLE OF MANIPULATOR CHARACTERISTICS IN SELECTING THE IDEAL EFFECTIVE VEHICLE**
Ronald A. Hess *In* JPL Proc. of the 17th Ann. Conf. Manual Control 15 Oct. 1981 p 431-448 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

A structural model of the human pilot is introduced and discussed. The model is used to provide a rationale for certain nonlinear pilot control behavior such as stick pulsing and serves as a framework for studying aspects of motor skill development. In light of the theoretical background provided by the model, some past empirical pilot response phenomena are analyzed and shown to be attributable to manipulator or control stick characteristics. In particular, some recent problems associated with pilot/vehicle performance in glideslope tracking in short takeoff and landing (STOL) aircraft are analyzed. The apparent contribution of the cockpit manipulator (throttle) characteristics to these problems are outlined and a solution proposed and evaluated in both simulation and flight test. J.M.S.

**COMPUTER AIDED MANUAL TRACKING**
Yung-Koh Yin and Russell F. Berg *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 449-454 ref

Avail: NTIS HC A99/MF A01 CSCL 05H

A scheme was developed to assist the human operator by augmenting an optic sight manual tracking loop with target rate estimates from a computer control algorithm which can either be a Kalman Filter or an alpha, beta, gamma filter. The idea is for the computer to provide rate tracking while the human operator is responsible for nullifying the tracking error. A simple schematic is shown to illustrate the implementation of this concept. A hybrid real-time man-in-loop simulation was used to compare the tracking performance of the same flight trajectory with or without this form of computer-aided track. Preliminary results show the advantage of computer-aided track against high speed aircraft at close range. However, good tracking before target state estimator maturity becomes more critical for aided track than without. Results are presented for a constant velocity flight trajectory. J.M.S.

A. K. Bejczy and M. Handlykken (Technical Univ. of Norway, Trondheim) *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 465-477 refs

(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 05H

Control experiments performed using an isotonic joystick connected to a six degree-of-freedom manipulator equipped with a six dimensional force-torque sensor at the base of the manipulator end effector are described. The preliminary control experiments were aimed at the investigation of the human operators' ability to command and control forces in different directions by varying the information conditions and the values of the feedforward and feedback command gains in the bilateral control loop. The main conclusions are: (1) a quantified graphic display of force-torque information can considerably enhance the operator's ability to perform a quantitatively sharp force-torque control, and (2) there seems to be a task dependent optimal combination of the feedforward and feedback command gain values which provide a dynamically smooth and stable bilateral control performance. Avail: NTIS HC A99/MF A01 CSCL 05H

The electromyographic responses to step torque loads were studied in flexors and extensors at the human wrist. Based on temporal bursting patterns and functional behavior, the response was divided into four temporal components. Two early components, the myotatic (30-60 ms) late myotatic (60-120 ms) appears to be reflex response. The third postmyotatic component (120-200 ms) appear to be a triggered reaction, preceeding the fourth, stabilizing component (200-400 ms). A comparison of response at the wrist with similar data at the ankle provides the basis for a generalized classification of the response in various muscles to torque step perturbations. Author

**PILOT SCANNING PATTERNS WHILE VIEWING COCKPIT DISPLAYS OF TRAFFIC INFORMATION**
Stephen R. Ellis and Lawrence Stark *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 517-524 refs
Prepared jointly with California Univ., Berkeley

Avail: NTIS HC A99/MF A01 CSCL 05H

Scanning eye movements of airline pilots were recorded while they judged air traffic situations displayed on cockpit displays of traffic information (CDTI). The observed 1st order transition patterns between points of interest on the display showed reliable deviation from those patterns predicted by the assumption of statistical independence. However, both patterns of transitions correlated quite well with each other. Accordingly, the assumption of independence provided a surprisingly good model of the results. Nevertheless, the deviation between the observed patterns of transition and that based on the assumption of independence was for all subjects in the direction of increased determinism. Thus, the results provide objective evidence consistent with the existence of 'scanpaths' in the data. Author

Voluntary active head rotations produced vestibulo-ocular reflex eye movements (VOR) with the subject viewing a fixation target. When this target jumped, the size of the refixation saccades were a function of the ongoing initial velocity of the eye. Saccades made against the VOR were larger in magnitude. Simulation of a reciprocally innervated model eye movement provided results comparable to the experimental data. Most of the experimental effect appeared to be due to linear summation for saccades of 5 and 10 degree magnitude. For small saccades of 2.5 degrees, peripheral nonlinear interaction of state variables in the neuromuscular plant also played a role as proven by comparable behavior in the simulated model with known controller signals. **BENEFITS OF DETAILED MODELS OF MUSCLE ACTIVATION AND MECHANICS**
Steven L. Lehman and Lawrence Stark *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 546-556 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

Recent biophysical and physiological studies identified some of the detailed mechanisms involved in excitation-contraction coupling, muscle contraction, and deactivation. Mathematical models incorporating these mechanisms allow independent estimates of key parameters, direct interplay between basic muscle research and the study of motor control, and realistic model behaviors, some of which are not accessible to previous, simpler, models. The existence of previously unmodeled behaviors has important implications for strategies of motor control and identification of neural signals. New developments in the analysis of differential equations make the more detailed models feasible for simulation in realistic experimental situations. Author

The decision process is described in terms of classical sequential decision theory by considering the hypothesis that an abnormal condition has occurred by means of a generalized likelihood ratio test. For this, a sufficient statistic is provided by the innovation sequence which is the result of the perception an information processing submodel of the human observer. On the basis of only two model parameters, the model predicts the decision speed/accuracy trade-off and various attentional characteristics. A preliminary test of the model for single variable failure detection tasks resulted in a very good fit of the experimental data. In a formal validation program, a variety of multivariable failure detection tasks was investigated and the predictive capability of the model was demonstrated. A.R.H.

**HUMAN SUPERVISION AND MICROPROCESSOR CONTROL OF AN OPTICAL TRACKING SYSTEM**
William J. Bigley and John D. Vandenberg *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 571-582 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

Gunners using small calibre anti-aircraft systems have not been able to track high-speed air targets effectively. Substantial improvement in the accuracy of surface fire against attacking aircraft has been realized through the design of a director-type weapon control system. This system concept frees the gunner to exercise a supervisory/monitoring role while the computer takes over continuous target tracking. This change capitalizes on a key consideration of human factors engineering while increasing system accuracy. The advanced system design, which uses distributed microprocessor control, is discussed at the block diagram level and is contrasted with the previous implementation. Author

Human errors tend to be treated in terms of clinical and anecdotal descriptions, from which remedial measures are difficult to derive. Correction of the sources of human error requires an attempt to reconstruct underlying and contributing causes of error from the circumstantial causes cited in official investigative reports. A comprehensive analytical theory of the cause-effect relationships governing propagation of human error is indispensable to a reconstruction of the underlying and contributing causes. A validated analytical theory of the input-output behavior of human operators involving manual control, communication, supervisory, and monitoring tasks which are relevant to aviation, maritime, automotive, and process control operations is highlighted. This theory of behavior, both appropriate and inappropriate, provides an insightful basis for investigating, classifying, and quantifying the needed cause-effect relationships governing propagation of human error. A.R.H.

**STABILITY ANALYSIS OF AUTOMOBILE DRIVER STEERING CONTROL**
R. Wade Allen *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 597-609 refs Sponsored in part by the Ford Motor Co.
Avail: NTIS HC A99/MF A01 CSCL 05H

In steering an automobile, the driver must basically control the direction of the car's trajectory (heading angle) and the lateral deviation of the car relative to a delineated pathway. A previously published linear control model of driver steering behavior which is analyzed from a stability point of view is considered. A simple approximate expression for a stability parameter, phase margin, is derived in terms of various driver and vehicle control parameters, and boundaries for stability are discussed. A field test study is reviewed that includes the measurement of driver steering control parameters. Phase margins derived for a range of vehicle characteristics are found to be generally consistent with known adaptive properties of the human operator. The implications of these results are discussed in terms of driver adaptive behavior. Author

**DETECTING HUMAN OPERATOR IMPAIRMENT WITH A PSYCHOMOTOR TASK**
R. Wade Allen, Anthony C. Stein, and Henry R. Jex *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 611-625 refs
(Contract DOT-HS-8-02052)
Avail: NTIS HC A99/MF A01 CSCL 05H

Psychomotor tasks have long been used as instruments for measuring human operator behavior and have often been proposed as selection and training devices. The application of the 'Critical-instability Tracking Test' (CTT) in the detection of alcohol impaired human operators is discussed. The detection problem wherein statistical decision theory is used to optimize the test's ability to discriminate impaired operators in the face of inherent variability in human performance is considered. Testing strategy is examined including setting performance criteria levels and determining the number of attempts permitted in order to pass the test. Also, the task's ability to detect operator impairment is compared to performance measures obtained in a driving simulator. A.R.H.

**VOICE CONTROL OF THE SPACE SHUTTLE VIDEO SYSTEM**
A. K. Bejczy, R. S. Dotson, J. W. Brown, and J. L. Lewis *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 627-640 Prepared in cooperation with NASA. Johnson Space Center
(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 05H

A pilot voice control system developed at the Jet Propulsion Laboratory (JPL) to test and evaluate the feasibility of controlling the shuttle TV cameras and monitors by voice commands utilizes a commercially available discrete word speech recognizer which can be trained to the individual utterances of each operator. Successful ground tests were conducted using a simulated full-scale space shuttle manipulator. The test configuration involved the berthing, maneuvering and deploying a simulated science payload in the shuttle bay. The handling task typically required 15 to 20 minutes and 60 to 80 commands to 4 TV cameras and 2 TV monitors. The best test runs show 98 to 100 percent voice recognition accuracy. A.R.H.

**A COMPARISON OF HEAD AND MANUAL CONTROL FOR A POSITION-CONTROL PURSUIT TRACKING TASK**
William H. Levison, Greg L. Zacharias, James L. Porterfield, Donald Monk, and Christopher Arbak *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 641-652 refs Prepared jointly with Aerospace Medical Div., Aerospace Medical Research Labs. (6570th)

Avail: NTIS HC A99/MF A01 CSCL 05H

Head control was compared with manual control in a pursuit tracking task involving proportional controlled-element dynamics. An integrated control/display system was used to explore tracking effectiveness in horizontal and vertical axes tracked singly and concurrently. Compared with manual tracking, head tracking resulted in a 50 percent greater rms error score, lower pilot gain, greater high-frequency phase lag and greater low-frequency remnant. These differences were statistically significant, but differences between horizontal- and vertical-axis tracking and between 1- and 2-axis tracking were generally small and not highly significant. Manual tracking results were matched with the optimal control model using pilot-related parameters typical of those found in previous manual control studies. Head tracking performance was predicted with good accuracy using the manual tracking model plus a model for head/neck response dynamics obtained from the literature. Author

**INTERRUPTION AS A TEST OF THE USER-COMPUTER INTERFACE**
John G. Kreifeldt and Mary E. McCarthy *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 655-667 refs
Avail: NTIS HC A99/MF A01 CSCL 05H

In order to study the effects different logic systems might have on interrupted operation, an algebraic calculator and a reverse polish notation calculator were compared when trained users were interrupted during problem entry. The RPN calculator showed markedly superior resistance to interruption effects compared to the AN calculator although no significant differences were found when the users were not interrupted. Causes and possible remedies for interruption effects are speculated. It is proposed that because interruption is such a common occurrence, it be incorporated into comparative evaluation tests of different logic system and control/display system and that interruption resistance be adopted as a specific design criteria for such design. A.R.H.

**N82-13722*#** Jet Propulsion Lab., California Inst. of Tech., Pasadena.
**A MODEL FOR THE CONTROL MODE MAN-COMPUTER INTERFACE DIALOGUE**
Roy L. Chafin *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 669-682 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

A four stage model is presented for the control mode man-computer interface dialogue. It consists of context development, semantic development syntactic development, and command execution. Each stage is discussed in terms of the operator skill levels (naive, novice, competent, and expert) and pertinent human factors issues. These issues are human problem solving, human memory, and schemata. The execution stage is discussed in terms of the operators typing skills. This model provides an understanding of the human process in command mode activity for computer systems and a foundation for relating system characteristics to operator characteristics. Author

One of the principal objectives of the NASA AgRISTARS program is the inventory of global crop resources using remotely sensed data gathered by Land Satellites (LANDSAT). A central problem in any such crop inventory procedure is the interpretation of LANDSAT images and identification of parts of each image which are covered by a particular crop of interest. This task of labeling is largely a manual one done by trained human analysts and consequently presents obstacles to the development of totally automated crop inventory systems. However, development in knowledge engineering as well as widespread availability of inexpensive hardware and software for artificial intelligence work offers possibilities for developing expert systems for labeling of crops. Such a knowledge based approach to labeling is presented. Author

**ANTHROPOMETRIC SIZING SYSTEMS FOR ARMY WOMEN'S FIELD CLOTHING**
Kathleen Robinette, Thomas Churchill, and John T. McConville Natick, Mass. Army Research and Development Lab. Mar. 1981 231 p
(Contract DAAK60-79-C-0097)
(AD-A102104; NATICK-TR-81/026; CEMEL-233) Avail: NTIS HC A11/MF A01 CSCL 05/1

A series of anthropometricaly based sizing programs and tariffs for Army women's field clothing are reported are size systems for upper body, lower body and total body garments are included. Sizing tables on which recommended values for some 59 dimensions relevant to garment construction are highlighted for easy identification are presented. Regression equations, rather than more traditional methods, were used to develop the sizing data and supportive material to permit designers to modify suggested dimensional values or to compute alternative sizing programs. A visual index accompanied by measurement descriptions, and bivariate distribution tables on which size categories have been graphically superimposed serve as visual references for users. Author

(AD-A102045; AFHRL-TR-81-19) Avail: NTIS HC A02/MF A01 CSCL 05/9

A method of adjusting technical school grades issued by schools of varying difficulty so that a new criterion is formed with all school grades adusted to the same metric was evaluated. This new criterion was used to recompute aptitude indexes which were compared with aptitude indexes computed in the conventional manner. It is found that the new aptitude indexes predict school grades in a cross validation sample better than the conventional aptitude indexes. Author

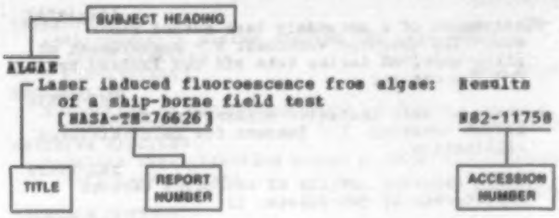
**TAXONOMY OF THE HUMAN FACTORS IN MAN MACHINE SYSTEMS [TAXONOMIE DER HUMANFAKTOREN IN MENSCH-MASCHINE-SYSTEMEN]**
K. Steininger (DFVLR, Hamburg) 1980 30 p refs In GERMAN
Avail: NTIS HC A03/MF A01

The human factors in man-machine systems are presented in a global model showing the manifold interplay between man, technical system and management. The psychic and social constraints involved are stressed. The nature of human error is also treated by means of a classification and the relation between work load and perceived stress is discussed. On the basis of these classifications, ergonometric methods and concepts for human factor engineering are derived and proposed for further investigations are formulated. Author (ESA)

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 230)* **MARCH 1982**

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABIOGENESIS**
- Molecular complexes of amino acids with porphyrins as possible precursors of pigment-protein systems A82-13841
- Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment A82-14197

AUSTRALIA
Gonadal doses from radiotherapy
[ARL/TR-020] N82-12762

Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes
[ARL/TR-023] N82-12763

AUTOMATIC CONTROL
Automatic planning of manipulator transfer movements
A82-15391

An approach to algorithms for processing data from the visual sensor of an integrated robot
A82-15681

Compilation of cell data bank for automation in diagnostic cytology
[BMFT-FB-T-80-158] N82-12742

Human control and regulation tasks
N82-12787

Supervisory control of remote manipulation: A preliminary evaluation
N82-13675

AUTOMOBILES
Cybernetics and car driving: A mathematical (computer) model for the system to be controlled
[IZF-1980-4] N82-12775

Cybernetics and car driving: A driver model and its experimental validation
[IZF-1980-13] N82-12776

Levels of steering control: Reproduction of steering wheel movements
[IZF-1980-16] N82-12777

Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled
[IZF-1980-19] N82-12778

The influence of motion cues on driver-vehicle performance in a simulator
N82-13681

A data collection scheme for identification of parameters in a driver model
N82-13696

Manual control analysis of drug effects on driving performance
N82-13709

Stability analysis of automobile driver steering control
N82-13717

AUTOREGRESSIVE PROCESSES
Computational problems in autoregressive moving average (ARMA) models
N82-13698

AVIONICS
Validating manned system design and engineering change proposals
A82-14703

B

B-52 AIRCRAFT
Validating manned system design and engineering change proposals
A82-14703

BACTERIA
An engineering study of bacterial kinetics and energetics
N82-12740

BACTERIOLOGY
An engineering study of bacterial kinetics and energetics
N82-12740

BALLISTIC MISSILE SUBMARINES
Work and rest on nuclear submarines
A82-14274

BALLISTIC TRAJECTORIES
Modeling human tracking error in several different anti-tank systems
N82-13699
On the internal target model in a tracking task
N82-13700

BANDWIDTH
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664

BEES
Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves
A82-14347
Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation
A82-14348

BETA PARTICLES
Chirality of electrons from beta-decay and the left-handed asymmetry of proteins
A82-13845

BIBLIOGRAPHIES
Effects of visual display units on the eyes - A bibliography /1972-1980/
A82-12873
Chemical evolution and the origin of life - Bibliography supplement 1979
A82-13846
Radiation effects on living systems. A bibliography of AECL publications
[AECL-6797] N82-12759

BINOCULAR VISION
The effects of binocular and motion-generated information on the perception of depth and height
A82-13423

BIOASTRONAUTICS
Human factors of outer space production --- Book
A82-15851
Biomedical research
[NASA-CR-3487] N82-12751

BIOCHEMISTRY
Hypoxic arousal in intact and carotid chemodenervated sleeping cats
A82-13236
Mathematical model of the spatial distribution and accumulation of assimilates in plants
A82-15702

BIOCONTROL SYSTEMS
EEG-correlates of training in the voluntary control of heart rate in man
A82-15703

BIODEGRADATION
Mitigation of biofouling using coatings
[DE81-027900] N82-13647

BIODYNAMICS
An engineering study of bacterial kinetics and energetics
N82-12740
User's guide to BIODYN-80: An interactive software package for modeling biodynamic feedthrough to a pilot's hands, head and eyes
[AD-A104933] N82-12786
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

BIOELECTRICITY
Mechanisms of temporal discrimination in the visual analyzer
A82-15714

BIOENGINEERING
An engineering study of bacterial kinetics and energetics
N82-12740
Pupillometry, a bioengineering overview
N82-13711

BIOINSTRUMENTATION
A self-contained, man-borne biomedical instrumentation system in the flight testing of naval weapons systems
[AIAA PAPER 81-2403] A82-13890
Digital spirometer for automatic pulmonary function
A82-14746

BIOLOGICAL EFFECTS
Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves
A82-14347
Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation
A82-14348
Repair of chemical damage in mammalian cells
[DE81-030823] N82-12757
Biological effects of low doses of ionizing radiation: Three review papers
[AECL-7059] N82-12758
Contributions to the genetic and mean bone-marrow doses of the Australian population from radiological procedures
[ARL/TR-017] N82-12764
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

BIOLOGICAL EVOLUTION
On the place of organic life in the universe and the possibility of extraterrestrial life
A82-13825

BIOLOGICAL MODELS (MATHEMATICS)
A discrete model of the circadian kinetics of human bone marrow
A82-15704
An engineering study of bacterial kinetics and energetics
N82-12740
User's guide to BIODYN-80: An interactive software package for modeling biodynamic feedthrough to a pilot's hands, head and eyes
[AD-A104933] N82-12786
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712
Benefits of detailed models of muscle activation and mechanics
N82-13713

BIOMASS
An engineering study of bacterial kinetics and energetics
N82-12740

BIOMEDICAL DATA
Digital image processing of bone - Problems and potentials
A82-15697

BIOMETRICS
Biomedical research
[NASA-CR-3487] N82-12751

BIOPHYSICS
Steady and unsteady pressure-flow relations in bronchial tree models
A82-14804
An investigation of ripcord pull force capability of male and female skydivers for ripcords located on the left main lift web at chest level
A82-14959
An engineering study of bacterial kinetics and energetics
N82-12740
Benefits of detailed models of muscle activation and mechanics
N82-13713

BIOSYNTHESIS
Are there structural analogies between amino acids and nucleic acids
A82-13840
DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353

An engineering study of bacterial kinetics and energetics
N82-12740

BLOOD FLOW
Oxygen deficiency in tissues and their blood supply
A82-13700
A monitor for noninvasive estimation of pulmonary blood flow
N82-13656
Algorithms for imaging myocardial blood flow using X-ray computed tomography
N82-13661

BODY FLUIDS
Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15719
The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

BODY KINEMATICS
Articulated hands - Force control and kinematic issues
A82-13110
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

BODY MEASUREMENT (BIOLOGY)
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724

BODY SIZE (BIOLOGY)
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724

BODY TEMPERATURE
Arm and leg intravascular temperatures of men during submaximal exercise
A82-13227
The theory of radiometric contact measurements of the internal temperature of bodies --- for human body
A82-13636
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706
Evaluation of natural convection under hyperbaric conditions
A82-15720

BODY WEIGHT
Quantitation of tissue loss during prolonged space flight
[NASA-CR-167460] N82-12752

BONE DEMINERALIZATION
Measurement of the bone mineral density of trabecular bone by a coherent and Compton scattering technique
N82-12747

BONE MARROW
A discrete model of the circadian kinetics of human bone marrow
A82-15704
Measurement of gonadal and bone-marrow doses from dental radiography
[ARL/TR-022] N82-12761
Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes
[ARL/TR-023] N82-12763
Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation
[ARL-TR-021] N82-13651

BONES
Digital image processing of bone - Problems and potentials
A82-15697
Thresholds of hearing by air conduction and by bone conduction under different masking conditions
[NPL-AC-100] N82-12768
An investigation of the status of bone conduction audiometer calibration in the National Health Service
[NPL-AC-101] N82-12769

BRADYCARDIA
Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans
A82-13233

BRAIN
The influence of scopolamine on the formation and fixation of temporary connections in rats with altered brain serotonin levels
A82-15701

BRAIN CIRCULATION
Potential for the use of biorhythm structures for the prognosis of the course of a disease
A82-15715

BRAIN DAMAGE
Potential for the use of biorhythm structures for the prognosis of the course of a disease
A82-15715

BREATHING APPARATUS
Steady and unsteady pressure-flow relations in bronchial tree models
A82-14804
U.S. Navy molecular sieve on-board oxygen generation system - An update
A82-14973

BRONCHI
Steady and unsteady pressure-flow relations in bronchial tree models
A82-14804

BUBBLES
Central venous bubbles and mixed venous nitrogen in goats following decompression
A82-13234

C

CALIBRATING
An investigation of the status of bone conduction audiometer calibration in the National Health Service
[NPL-AC-101] N82-12769

CARBOHYDRATE METABOLISM
Quantitation of tissue loss during prolonged space flight
[NASA-CR-167460] N82-12752

CARBON DIOXIDE
Experimental studies on the survival capacity in the sealed environment. III
A82-15515

CARBON MONOXIDE
ACTH and cortisol responses to hypoxia in dogs
A82-13235

CARBOXYHEMOGLOBIN TEST
Hypoxic arousal in intact and carotid chemodenervated sleeping cats
A82-13236

CARCINOGENS
Repair of chemical damage in mammalian cells
[DE81-030823] N82-12757

CARDIOGRAMS
Medical diagnostic application of radiofrequency range electromagnetic waves
N82-12746

CARDIOLOGY
Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans
A82-13233

CARDIOVASCULAR SYSTEM
Central venous bubbles and mixed venous nitrogen in goats following decompression
A82-13234
The application of a combined passive orthostatic test in the flight medical examination
A82-13550
Cardiovascular responses to mixed static and dynamic exercise
A82-14803
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
N82-13648

CAROTID SINUS BODY
Hypoxic arousal in intact and carotid chemodenervated sleeping cats
A82-13236

CATHODE RAY TUBES
Eye movement measurement of readability of CRT displays
A82-12069
Visual fatigue and cathode ray tube display terminals
A82-12070
An evaluation of alphanumeric, graphic, and color information displays
A82-12071

Effects of extended practice on dual-task tracking performance
A82-12875

CELL DIVISION
A discrete model of the circadian kinetics of human bone marrow
A82-15704

CELLS (BIOLOGY)
Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn
A82-15352
DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353
Neurotrophic factor - Characterization and partial purification
A82-15698
Compilation of cell data bank for automation in diagnostic cytology
[BMFT-FB-T-80-158] N82-12742
Chemical protection of cells in culture and mice against X-irradiation
[HBL-1979-2] N82-12743
Studies in erythropoiesis: The influence of the glycocalyx of the red cell membrane
[DE81-930668] N82-12760

CENTRAL NERVOUS SYSTEM
Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain
[NDRE/PUBL-81/1001] N82-12738

CHARACTER RECOGNITION
Eye movement measurement of readability of CRT displays
A82-12869

CHARGE CARRIERS
Primordial transport of sugars and amino acids via Schiff bases --- role in the origin of an early protocell
A82-13044

CHEMICAL ANALYSIS
Skylab water balance analysis
[NASA-CR-167461] N82-12753

CHEMICAL EVOLUTION
On the place of organic life in the universe and the possibility of extraterrestrial life
A82-13025
A working hypothesis on the interdependent genesis of nucleotide bases, protein amino acids, and primitive genetic code
A82-13039
Molecular complexes of amino acids with porphyrins as possible precursors of pigment-protein systems
A82-13041
Constant AMP synthesis in aqueous solution by electric discharges --- simulating primitive earth conditions
A82-13042
Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions
A82-13043
Primordial transport of sugars and amino acids via Schiff bases --- role in the origin of an early protocell
A82-13044
Chirality of electrons from beta-decay and the left-handed asymmetry of proteins
A82-13045
Chemical evolution and the origin of life - Bibliography supplement 1979
A82-13046
Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment
A82-14197

CHEMORECEPTORS
Oxygen deficiency in tissues and their blood supply
A82-13700

CHINESE PEOPLES REPUBLIC
China report: Science and technology, no. 128
[JPRS-79047] N82-12789

CHIRAL DYNAMICS
Chirality of electrons from beta-decay and the left-handed asymmetry of proteins
A82-13045

CHRONIC CONDITIONS
The frequency of vestibular impairments in chronic purulent medial otitis
A82-15710

CINEMATOGRAPHY
Close-range cine-photogrammetry: A generalized technique for quantifying gross human motion
N82-12781

CIRCADIAN RHYTHMS
A discrete model of the circadian kinetics of human bone marrow
A82-15704
Potential for the use of biorhythm structures for the prognosis of the course of a disease
A82-15715

CLASSIFICATIONS
The classification of hypoxic conditions
A82-15700

CLINICAL MEDICINE
Gastrointestinal allergy in the experimental animal: The use of radioiodinated serum albumin in the assessment of new drugs
[IAEA-R-2067-F] N82-12741
Inventory of medical technological research in the Netherlands
N82-12767

CLOSED ECOLOGICAL SYSTEMS
Nutritional criteria for closed-loop space food systems
A82-15856
Rationale for evaluating a closed food chain for space habitats
A82-15857

CLOSURES
Zipper rear closure endurance testing
[AD-A104732] N82-12785

COCKPIT SIMULATORS
Pilot estimates of glidepath and aim point during simulated landing approaches
[NASA-TM-81325] N82-12772

COCKPITS
Factors affecting seat-man dynamics during emergency egress
A82-14964
Modeling of the aircraft in-trail-following task during profile descent
N82-13690
Functional structure and dynamics of the human nervous system
N82-13692

COGNITION
Pupillometric measurement of operator workload
N82-13666
The cognitive demands of second order manual control: Applications of the event related brain potential
N82-13667
Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679

COHERENT SCATTERING
Measurement of the bone mineral density of trabecular bone by a coherent and Compton scattering technique
N82-12747

COLD ACCLIMATIZATION
Changes in the heat resistance of rats under various regimes of cold adaptation
A82-12952
Experimental studies on the survival capacity in the sealed environment. III
A82-15515

COLLAGENS
Oxygen toxicity and lung collagenous protein
[AD-A104702] N82-12756

COLLISION AVOIDANCE
Automatic planning of manipulator transfer movements
A82-15391

COLLISIONS
Review of human and operational factors affecting the feasibility of the see-and-avoid concept
[DFVLR-MITT-81-13] N82-12780

COMMAND AND CONTROL
Voice control of the space shuttle video system
N82-13719

COMMUNICATING
Linguistic and human performance considerations in the design of an anticipatory communication aid N82-13657

COMPTON EFFECT
Measurement of the bone mineral density of trabecular bone by a coherent and Compton scattering technique N82-12787

COMPUTER GRAPHICS
An evaluation of alphanumeric, graphic, and color information displays A82-12871

COMPUTER PROGRAMMING
Automatic planning of manipulator transfer movements A82-15391

COMPUTER PROGRAMS
Medical diagnostic application of radiofrequency range electromagnetic waves N82-12746
Skylab water balance analysis [NASA-CR-167461] N82-12753

COMPUTER TECHNIQUES
Digital image processing of bone - Problems and potentials A82-15697
Methodical study of the contribution of the human system to the insecurity of technological systems --- computerized accident analysis N82-12788
Computer aided manual tracking N82-13705

COMPUTERIZED DESIGN
Validating manned system design and engineering change proposals A82-14703

COMPUTERIZED SIMULATION
The interaction between the edge effect and target conspicuity in visual search A82-12874
SADT/SAINT simulation technique --- Structural Analysis Design Technique/System Analysis of Integrated Network of Tasks for man-machine systems A82-14677
User's guide to BIODYN-80: An interactive software package for modeling biodynamic feedthrough to a pilot's hands, head and eyes [AD-A104933] N82-12786
Predictor symbology in computer-generated perspective displays N82-13674
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR) N82-13712

COMPUTERS
Interruption as a test of the user-computer interface N82-13721
A model for the control mode man-computer interface dialogue N82-13722

CONDITIONED REFLEXES
The influence of scopolamine on the formation and fixation of temporary connections in rats with altered brain serotonin levels A82-15701

CONFERENCES
Proceedings of the Seventeenth Annual Conference on Manual Control [NASA-CR-165005] N82-13665

CONTINUOUS RADIATION
Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves A82-14347
Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation A82-14348

CONTROL
A model for the control mode man-computer interface dialogue N82-13722

CONTROL SIMULATION
Man/machine interface development for the REMOTEX concept N82-13678
Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

CONTROL STABILITY
Stability analysis of automobile driver steering control N82-13717

CONTROL THEORY
The magnetostatic force produced by current loops and in medical applications N82-12748

CONTROLLABILITY
Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062
On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

CONTROLLERS
A data collection scheme for identification of parameters in a driver model N82-13696

CONVECTIVE HEAT TRANSFER
Thermoregulatory responses to local convective and radiative cooling A82-12951
Evaluation of natural convection under hyperbaric conditions A82-15720

COSMONAUTS
The otolith reflex and space perception in cosmonauts A82-15717

CREW PROCEDURES (INFLIGHT)
Crew activities in space N82-12129
An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary [NASA-CR-164993] N82-12782
An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783

CREW STATIONS
Factors affecting seat-man dynamics during emergency egress A82-14964

CRITICAL FLICKER FUSION
Mechanisms of temporal discrimination in the visual analyzer A82-15718

CROP INVENTORIES
Structure of the knowledge base for an expert labeling system N82-13723

CULTURE TECHNIQUES
Method and apparatus for detecting coliform organisms [NASA-CASE-ARC-11322-1] N82-12739
Chemical protection of cells in culture and mice against X-irradiation [MBL-1979-2] N82-12743

CURVE FITTING
Weighting of aptitude components based on differences in technical school difficulty [AD-A102045] N82-13725

CYBERNETICS
Cybernetics and car driving: A mathematical (computer) model for the system to be controlled [IZF-1980-4] N82-12775
Cybernetics and car driving: A driver model and its experimental validation [IZF-1980-13] N82-12776
Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled [IZF-1980-19] N82-12778
A model for the control mode man-computer interface dialogue N82-13722

CYTOLOGY
Compilation of cell data bank for automation in diagnostic cytology [BMFT-FB-T-80-150] N82-12742

## D

DARK ADAPTATION
  Pupillometry, a bioengineering overview
  N82-13711
DATA CONVERSION ROUTINES
  Simple geometric algorithms to aid in clearance management for robotic mechanisms
  N82-13680
DATA CORRELATION
  Weighting of aptitude components based on differences in technical school difficulty
  [AD-A102085] N82-13725
DATA PROCESSING
  An approach to algorithms for processing data from the visual sensor of an integrated robot
  A82-15681
DECISION MAKING
  Pilot estimates of glidepath and aim point during simulated landing approaches
  [NASA-TM-81325] N82-12772
  An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary
  [NASA-CR-164993] N82-12782
  The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis
  N82-13050
  Identification of cognitive factors related to remote work performance using closed circuit TV displays
  N82-13679
  Decision aids for airborne intercept operations in advanced aircrafts
  N82-13683
  A model of the human observer and decision maker
  N82-13714
DECOMPRESSION SICKNESS
  Central venous bubbles and mixed venous nitrogen in goats following decompression
  A82-13234
DENTISTRY
  Measurement of gonadal and bone-marrow doses from dental radiography
  [ARL/TR-022] N82-12761
DEOXYRIBONUCLEIC ACID
  Repair of chemical damage in mammalian cells
  [DE81-030823] N82-12757
DEPOSITION
  Deposition of aerosol particles in the human respiratory tract
  N82-13659
DEPTH
  A model for the submarine depthkeeping team
  N82-13689
DESIGN ANALYSIS
  Information and display requirements for aircraft terrain following
  N82-13695
DETECTION
  Analytical detection of organic species by means of laser-induced multiphoton ionization
  N82-13646
DIAGNOSIS
  Potential for the use of biorhythm structures for the prognosis of the course of a disease
  A82-15715
  Compilation of cell data bank for automation in diagnostic cytology
  [BMFT-FB-T-80-158] N82-12742
  Medical diagnostic application of radiofrequency range electromagnetic waves
  N82-12746
DIFFUSION
  A monitor for noninvasive estimation of pulmonary blood flow
  N82-13656
DIGITAL FILTERS
  Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
  N82-13648
DIGITAL SIMULATION
  Cybernetics and car driving: A mathematical (computer) model for the system to be controlled
  [IZF-1980-4] N82-12775
DIGITAL TECHNIQUES
  Digital spirometer for automatic pulmonary function
  A82-14746
  Digital image processing of bone - Problems and potentials
  A82-15697
DIMERIZATION
  Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions
  A82-13843
DISPLAY DEVICES
  Visual fatigue and cathode ray tube display terminals
  A82-12870
  An evaluation of alphanumeric, graphic, and color information displays
  A82-12871
  Effects of visual display units on the eyes - A bibliography /1972-1980/
  A82-12873
  The interaction between the edge effect and target conspicuity in visual search
  A82-12874
  How to display digital SONAR signals. Some primary threshold measurements
  [IZF-1979-16] N82-12773
  Equipment design must incorporate ease of operation
  N82-12790
  Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities
  N82-13062
  Proceedings of the Seventeenth Annual Conference on Manual Control
  [NASA-CR-165005] N82-13665
  Horizontal conflict resolution maneuvers with a cockpit display of traffic information
  N82-13671
  Predictor symbology in computer-generated perspective displays
  N82-13674
  Modeling of the aircraft in-trail-following task during profile descent
  N82-13690
  Functional structure and dynamics of the human nervous system
  N82-13692
  Information and display requirements for aircraft terrain following
  N82-13695
  Pilot scanning patterns while viewing cockpit displays of traffic information
  N82-13710
DIURNAL VARIATIONS
  Diurnal variation in vigilance efficiency
  A82-14275
DOCUMENTATION
  China report: Science and technology, no. 128
  [JPRS-79047] N82-12789
DOSAGE
  Measurement of gonadal and bone-marrow doses from dental radiography
  [ARL/TR-022] N82-12761
DRUGS
  Manual control analysis of drug effects on driving performance
  N82-13709
DURABILITY
  Zipper rear closure endurance testing
  [AD-A104732] N82-12785
DYNAMIC CHARACTERISTICS
  Determination of efficient methods of lift by comparing trained and untrained male and female lifters
  [AD-A100349] N82-13650
DYNAMIC MODELS
  Benefits of detailed models of muscle activation and mechanics
  N82-13713
  A model of the human observer and decision maker
  N82-13714
DYNAMIC RESPONSE
  Identification of the adaptive feedback of the human motor system using the response difference method
  N82-12754
  User's guide to BIODYN-80: An interactive software package for modeling biodynamic feedthrough to a pilot's hands, head and eyes
  [AD-A104933] N82-12786

Dynamic measurement of human vertical fusional response
N82-13660

E

EARTH (PLANET)
From inanimate matter to living systems
A82-15700

EDEMA
Hypoxic vasoconstriction and fluid filtration in pig lungs
A82-13226

EFFERENT NERVOUS SYSTEMS
The influence of motion cues on driver-vehicle performance in a simulator
N82-13681

Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

EGRESS
Factors affecting seat-man dynamics during emergency egress
A82-14964

EJECTION INJURIES
System to measure head motion during parachute opening shock
[AIAA PAPER 81-2517] A82-13914

EJECTION SEATS
Factors affecting seat-man dynamics during emergency egress
A82-14964

ELECTRIC CURRENT
The magnetostatic force produced by current loops and in medical applications
N82-12748

ELECTRIC DISCHARGES
Constant AMP synthesis in aqueous solution by electric discharges --- simulating primitive earth conditions
A82-13842

ELECTRIC POTENTIAL
Method and apparatus for detecting coliform organisms
[NASA-CASE-ARC-11322-1] N82-12739

ELECTRIC STIMULI
Transcutaneous electrical peripheral nerve stimulation: Implications for neural control mechanisms
N82-12749

ELECTROENCEPHALOGRAPHY
EEG-correlates of training in the voluntary control of heart rate in man
A82-15703

The nature of induced EEG activity in the alpha-rhythm range
A82-15713

Future directions for selecting personnel --- spacecrews for long duration space flight
A82-15853

ELECTROMAGNETIC ABSORPTION
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions
A82-13175

ELECTROMAGNETIC RADIATION
Medical diagnostic application of radiofrequency range electromagnetic waves
N82-12746

ELECTROMYOGRAPHY
Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

ELECTRON CAPTURE
Analytical detection of organic species by means of laser-induced multiphoton ionization
N82-13646

ELECTRONIC CONTROL
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback
N82-13677

ELECTROPHYSIOLOGY
The nature of induced EEG activity in the alpha-rhythm range
A82-15713

EMBOLISMS
Central venous bubbles and mixed venous nitrogen in goats following decompression
A82-13234

EMERGENCIES
Trouble shooting pattern of emergency through instruments by jet-pilots. II
A82-15521

An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary
[NASA-CR-164993] N82-12782

An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix
[NASA-CR-164994] N82-12783

ENERGY ABSORPTION
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions
A82-13175

ENERGY TECHNOLOGY
Health and safety research division
[DE81-026088] N82-13652

ENVIRONMENT EFFECTS
Overview of the biomedical and environmental programs at the Oak Ridge National Laboratory
[DE81-027864] N82-12765

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

ENVIRONMENT POLLUTION
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

ERRORS
Modeling human tracking error in several different anti-tank systems
N82-13699

On the internal target model in a tracking task
N82-13700

ERYTHROCYTES
Studies in erythropoiesis: The influence of the glycocalyx of the red cell membrane
[DP81-030668] N82-12760

ESCHERICHIA
Method and apparatus for detecting coliform organisms
[NASA-CASE-ARC-11322-1] N82-12739

ETHYL ALCOHOL
Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

EVACUATING (TRANSPORTATION)
Some characteristics of the aerial evacuation of the sick and otorhinolaryngologically injured
A82-15711

EXCRETION
Sweating responses of men and women during exercise in humid and dry heat
N82-12745

EXERCISE PHYSIOLOGY
Arm and leg intravascular temperatures of men during submaximal exercise
A82-13227

Effect of exhaustive exercise on myocardial performance
A82-13228

Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans
A82-13233

Cardiovascular responses to mixed static and dynamic exercise
A82-14003

EXHAUSTION
Effect of exhaustive exercise on myocardial performance
A82-13228

EXOBIOLOGY
Nutritional criteria for closed-loop space food systems
A82-15856

Rationale for evaluating a closed food chain for space habitats
A82-15857

**EXPOSURE**
Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes [ARL/TR-023] N82-12763
Anti-exposure technology identification for mission specific operational requirements [AD-A105070] N82-12784

**EXTRATERRESTRIAL LIFE**
On the place of organic life in the universe and the possibility of extraterrestrial life A82-13825

**EXTRATERRESTRIAL MATTER**
On the place of organic life in the universe and the possibility of extraterrestrial life A82-13825

**EYE (ANATOMY)**
Effects of visual display units on the eyes - A bibliography /1972-1980/ A82-12873
Veiling glare reduction methods compared for ophthalmic applications A82-13289

**EYE MOVEMENTS**
Eye movement measurement of readability of CRT displays A82-12869
Dynamic measurement of human vertical fusional response N82-13660

**EYE PROTECTION**
Holographic laser eye protection A82-14971

**F**

**FATIGUE (BIOLOGY)**
Visual fatigue and cathode ray tube display terminals A82-12870
Effect of exhaustive exercise on myocardial performance A82-13228

**FEAR OF FLYING**
A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination A82-15520

**FEEDBACK CONTROL**
Comparison of closed loop model with flight test results N82-13691
Functional structure and dynamics of the human nervous system N82-13692
On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693
Information and display requirements for aircraft terrain following N82-13695
The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
Computer aided manual tracking N82-13705
Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707

**FEEDFORWARD CONTROL**
Identification of the adaptive feedback of the human motor system using the response difference method N82-12754

**FEMALES**
The physiological response of anthropometrically selected female military personnel to the test parachuting environment A82-14957

**FIELD OF VIEW**
Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672

**FLASH LAMPS**
The nature of induced EEG activity in the alpha-rhythm range A82-15713

**FLIGHT CHARACTERISTICS**
Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports N82-13687
Comparison of closed loop model with flight test results N82-13691

**FLIGHT CLOTHING**
Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner A82-15519

**FLIGHT CONTROL**
Functional structure and dynamics of the human nervous system N82-13692
On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

**FLIGHT CREWS**
Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators A82-14037
Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems A82-14039
In-flight physiological monitoring of tactical jet aircrewmen A82-14962
Holographic laser eye protection A82-14971
An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary [NASA-CR-164993] N82-12782
An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783

**FLIGHT HAZARDS**
An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary [NASA-CR-164993] N82-12782
An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783

**FLIGHT SIMULATION**
Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems A82-14039
An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary [NASA-CR-164993] N82-12782
An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783

**FLIGHT SIMULATORS**
Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators A82-14037
Development of a secondary task method for measuring operator workload. V - Measurement of pilot workload during take off and landing by C-1 jet carrier A82-15516

**FLIGHT STRESS (BIOLOGY)**
Performance changes during exposure to +Gz stress A82-15517

**FLIGHT TESTS**
A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination A82-15520

**FLIGHT TRAINING**
A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination A82-15520

FLOW VELOCITY
Steady and unsteady pressure-flow relations in bronchial tree models A82-14804

FOOD CHAIN
Rationale for evaluating a closed food chain for space habitats A82-15857

FORCED VIBRATION
Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13653

FOSSIL FUELS
Overview of the biomedical and environmental programs at the Oak Ridge National Laboratory [DE81-027864] N82-12765

FRACTIONS
Identification and toxicity of fractionated-shale-oil components [DE81-028460] N82-12766

FREQUENCY RANGES
Visual/motion cue mismatch in a coordinated roll maneuver [NASA-CR-166259] N82-13664

G

GAMMA RAYS
Gamma facilities for radiobiological investigations /Design and experimental results/ --- Russian book A82-14674

GANGLIA
Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment [AD-A103744] N82-13649

GARMENTS
Zipper gear closure endurance testing [AD-A104732] N82-12785

GASTROINTESTINAL SYSTEM
Gastrointestinal allergy in the experimental animal: The use of radioiodinated serum albumin in the assessment of new drugs [IAEA-R-2067-F] N82-12741

GENETIC CODE
A working hypothesis on the interdependent genesis of nucleotide bases, protein amino acids, and primitive genetic code A82-13839

GENETIC ENGINEERING
Repair of chemical damage in mammalian cells [DE81-030823] N82-12757

GENETICS
Biological effects of low doses of ionizing radiation: Three review papers [AECL-7059] N82-12758
Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes [ARL/TR-023] N82-12763

GLARE
Veiling glare reduction methods compared for ophthalmic applications A82-13289

GLIDE PATHS
Pilot estimates of glidepath and aim point during simulated landing approaches [NASA-TM-81325] N82-12772

GLUTAMATES
Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain [NDRE/PUBL-81/1001] N82-12738

GLYCINE
Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions A82-13843

GONADS
Measurement of gonadal and bone-marrow doses from dental radiography [ARL/TR-022] N82-12761
Gonadal doses from radiotherapy [ARL/TR-020] N82-12762

GRATINGS
A single-channel model does not predict visibility of asynchronous gratings A82-15358

GRATINGS (SPECTRA)
Holographic laser eye protection A82-14971

GROUND CREWS
An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783

H

HALOCARBONS
Biologically damaging radiation amplified by ozone depletions A82-15780
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update [PB81-232811] N82-13655

HALOGEN COMPOUNDS
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update [PB81-232811] N82-13655

HANDICAPS
A data collection scheme for identification of parameters in a driver model N82-13696

HEAD MOVEMENT
The effects of binocular and motion-generated information on the perception of depth and height A82-13423
System to measure head motion during parachute opening shock [AIAA PAPER 81-2517] A82-13914
A comparison of head and manual control for a position-control pursuit tracking task N82-13720

HEALTH PHYSICS
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions A82-13175
Contributions to the genetic and mean bone-marrow doses of the Australian population from radiological procedures [ARL/TR-017] N82-12764
Health and safety research division [DE81-026088] N82-13652

HEARING
Thresholds of hearing by air conduction and by bone conduction under different masking conditions [NPL-AC-100] N82-12768
An investigation of the status of bone conduction audiometer calibration in the National Health Service [NPL-AC-101] N82-12769

HEART FUNCTION
Comparison of impedance ventricular function indices with systolic time intervals A82-14806

HEART RATE
Effect of exhaustive exercise on myocardial performance A82-13228
Performance changes during exposure to +Gz stress A82-15517
EEG-correlates of training in the voluntary control of heart rate in man A82-15703
The heart rate of aspirant air pilots in a hypobaric chamber [IZF-1979-35] N82-12770

HEAT ACCLIMATIZATION
Sweating responses of men and women during exercise in humid and dry heat N82-12745

HEAT EXCHANGERS
Mitigation of biofouling using coatings [DE81-027900] N82-13647

HEAT TRANSFER
Arm and leg intravascular temperatures of men during submaximal exercise A82-13227

HEIGHT
The effects of binocular and motion-generated information on the perception of depth and height A82-13423

HELIUM-OXYGEN ATMOSPHERES
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706

HELMETS
Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner
A82-15519

HEMODYNAMIC RESPONSES
The application of a combined passive orthostatic test in the flight medical examination
A82-13550

Comparison of impedance ventricular function indices with systolic time intervals
A82-14096

Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15710

HIBERNATION
Artificial hypobiosis as a stable functional state of reduced vital activity
A82-13695

HIGH PRESSURE
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706

HIGH TEMPERATURE ENVIRONMENTS
Changes in the heat resistance of rats under various regimes of cold adaptation
A82-12952

HIGH TEMPERATURE TESTS
Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner
A82-15519

HIPPOCAMPUS
Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain
[NDRE/PUBL-81/1001] N82-12738

HISTOLOGY
Digital image processing of bone - Problems and potentials
A82-15697

HOLOGRAPHY
Holographic laser eye protection
A82-14971

HUMAN BEHAVIOR
Well-being and privacy in space - Anticipating conflicts of interest
A82-15054

Close-range cine-photogrammetry: A generalized technique for quantifying gross human motion
N82-12781

Human control and regulation tasks
N82-12787

A theory of human error
N82-13716

HUMAN BODY
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions
A82-13175

A discrete model of the circadian kinetics of human bone marrow
A82-15704

Evaluation of natural convection under hyperbaric conditions
A82-15720

The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

HUMAN FACTORS ENGINEERING
Eye movement measurement of readability of CRT displays
A82-12864

Validating manned system design and engineering change proposals
A82-14708

The physiological responses of anthropometrically selected female military personnel to the test parachuting environment
A82-14957

In-flight physiological monitoring of tactical jet aircrewmen
A82-14962

Factors affecting seat-man dynamics during emergency egress
A82-14964

Human factors of outer space production --- Book
A82-15051

Review of human and operational factors affecting the feasibility of the see-and-avoid concept
[DFVLR-MITT-81-13] N82-12780

Anti-exposure technology identification for mission specific operational requirements
[AD-A105070] N82-12784

Human control and regulation tasks
N82-12787

Methodical study of the contribution of the human system to the insecurity of technological systems --- computerized accident analysis
N82-12788

China report: Science and technology, no. 128
[JPRS-79047] N82-12789

Equipment design must incorporate ease of operation
N82-12790

Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

Linguistic and human performance considerations in the design of an anticipatory communication aid
N82-13657

An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13662

An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13663

Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664

Supervisory control of remote manipulation: A preliminary evaluation
N82-13675

Design and development of a six degree of freedom hand controller
N82-13706

Human supervision and microprocessor control of an optical tracking system
N82-13715

A model for the control mode man-computer interface dialogue
N82-13722

Taxonomy of the human factors in man machine systems
N82-13726

HUMAN PATHOLOGY
Potential for the use of biorhythm structures for the prognosis of the course of a disease
A82-15715

HUMAN PERFORMANCE
An evaluation of alphanumeric, graphic, and color information displays
A82-12871

Effects of extended practice on dual-task tracking performance
A82-12875

Performance changes during exposure to +Gz stress
A82-15517

Linguistic and human performance considerations in the design of an anticipatory communication aid
N82-13657

The influence of motion cues on driver-vehicle performance in a simulator
N82-13681

Multiple man-machine interfaces
N82-13682

A model of the human observer and decision maker
N82-13714

HUMAN REACTIONS
The nature of induced EMG activity in the alpha-rhythm range
A82-15713

Psychological considerations in future space missions
A82-15052

Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

HUMAN TOLERANCES
A self-contained, man-borne biomedical instrumentation system in the flight testing of naval weapons systems
[AIAA PAPER 81-2403] A82-13890

System to measure head motion during parachute
opening shock
[AIAA PAPER 81-2517] A82-13914
The oxygen regime of the human organism under
conditions of extreme hypobaric hypoxia
A82-15709
Influence of 15-day alimentary starvation on human
tolerance to the breathing of pure nitrogen
A82-15710
Equipment design must incorporate ease of operation
N82-12790

HYDRAZINES
Hydrazines and carbohydrazides produced from
oxidized carbon in earth's primitive environment
A82-14197

HYDROCARBONS
Identification and toxicity of
fractionated-shale-oil components
[DE81-028460] N82-12766

HYDROXYCORTICOSTEROID
ACTH and cortisol responses to hypoxia in dogs
A82-13235

HYOSCINE
The influence of scopolamine on the formation and
fixation of temporary connections in rats with
altered brain serotonin levels
A82-15701

HYPERBARIC CHAMBERS
Evaluation of natural convection under hyperbaric
conditions
A82-15720

HYPEROXIA
Impaired surfactant phospholipid metabolism in
hyperoxic mouse lungs
A82-13230
Pulmonary injury in rats following continuous
exposure to 60% O2 for 7 days
A82-13232

HYPERVENTILATION
ACTH and cortisol responses to hypoxia in dogs
A82-13235

HYPOBARIC ATMOSPHERES
The oxygen regime of the human organism under
conditions of extreme hypobaric hypoxia
A82-15709
The heart rate of aspirant air pilots in a
hypobaric chamber
[IZF-1979-35] N82-12770

HYPODYNAMIA
Management by means of muscular activity under
unloaded conditions
A82-15712

HYPOKINESIA
DNA and RNA synthesis in the isolated nuclei of
rat skeletal muscle fibers during hypokinesia
A82-15353
Structural changes in motor neurons during hind
limb immobilization
A82-15707

HYPOTHERMIA
Artificial hypobiosis as a stable functional state
of reduced vital activity
A82-13699
Anti-exposure technology identification for
mission specific operational requirements
[AD-A105070] N82-12704

HYPOXIA
Hypoxic vasoconstriction and fluid filtration in
pig lungs
A82-13226
Steady-state vascular responses to graded hypoxia
in isolated lungs of five species
A82-13231
ACTH and cortisol responses to hypoxia in dogs
A82-13235
Hypoxic arousal in intact and carotid
chemodenervated sleeping cats
A82-13236
Oxygen deficiency in tissues and their blood supply
A82-13700
The sensitivity of the retinal nerve fibre layer
to elevated intraocular pressure and graded
hypoxia in the cat
A82-15475
Experimental studies on the survival capacity in
the sealed environment. III
A82-15515
The classification of hypoxic conditions
A82-15709

The oxygen regime of the human organism under
conditions of extreme hypobaric hypoxia
A82-15709
Influence of 15-day alimentary starvation on human
tolerance to the breathing of pure nitrogen
A82-15710

I

IMAGE PROCESSING
Digital image processing of bone - Problems and
potentials
A82-15697
Structure of the knowledge base for an expert
labeling system
N82-13723

IMAGE RESOLUTION
Video framerate, resolution and grayscale
tradeoffs for undersea telemanipulator
N82-13673

IMINES
Primordial transport of sugars and amino acids via
Schiff bases --- role in the origin of an early
protocell
A82-13844

IMMOBILIZATION
Structural changes in motor neurons during hind
limb immobilization
A82-15707
Removal by negative air ions of changes in
mitochondrial respiration under stress
A82-15716

IMPACT ACCELERATION
A Monte Carlo study of the use of auxiliary
information in the development of an impact
acceleration injury prediction model
[AD-A105463] N82-12755

IMPACT PREDICTION
A Monte Carlo study of the use of auxiliary
information in the development of an impact
acceleration injury prediction model
[AD-A105463] N82-12755

IMPAIRMENT
Detecting human operator impairment with a
psychomotor task
N82-13710

IN-FLIGHT MONITORING
A self-contained, man-borne biomedical
instrumentation system in the flight testing of
naval weapons systems
[AIAA PAPER 81-2403] A82-13890
In-flight physiological monitoring of tactical jet
aircrewmen
A82-14962
Development of a secondary task method for
measuring operator workload. V - Measurement of
pilot workload during take off and landing by
C-1 jet carrier
A82-15516

INCENTIVES
Multiple man-machine interfaces
N82-13682

INDEPENDENT VARIABLES
A quasi-Newton procedure for identifying
pilot-related parameters of the optimal control
model
N82-13694
Two-D results on human operator perception
N82-13697

INDEXES (RATIOS)
Weighting of aptitude components based on
differences in technical school difficulty
[AD-A102045] N82-13725

INDUSTRIAL SAFETY
Methodical study of the contribution of the human
system to the insecurity of technological systems
--- computerized accident analysis
N82-12788

INFORMATION THEORY
A model of the human observer and decision maker
N82-13714

INJURIES
Some characteristics of the aerial evacuation of
the sick and otorhinolaryngologically injured
A82-15711
A Monte Carlo study of the use of auxiliary
information in the development of an impact
acceleration injury prediction model
[AD-A105463] N82-12755

INPUT/OUTPUT ROUTINES
Computational problems in autoregressive moving average (ARMA) models N82-13698

INTERFACES
Interruption as a test of the user-computer interface N82-13721
A model for the control mode man-computer interface dialogue N82-13722

INTERRUPTION
Interruption as a test of the user-computer interface N82-13721

INTOXICATION
Detecting human operator impairment with a psychomotor task N82-13718

INTRAOCULAR PRESSURE
The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat A82-15475

INTRAVASCULAR SYSTEM
Arm and leg intravascular temperatures of men during submaximal exercise A82-13227

INTRAVEHICULAR ACTIVITY
Crew activities in space N82-12129

IONIZATION
Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

IONIZING RADIATION
Biological effects of low doses of ionizing radiation: Three review papers
[AECL-7059] N82-12758

IRON ISOTOPES
Studies in erythropoiesis: The influence of the glycocalyx of the red cell membrane
[DE81-030668] N82-12760

IRON 59
Studies in erythropoiesis: The influence of the glycocalyx of the red cell membrane
[DE81-030668] N82-12760

J

JET AIRCRAFT
Some characteristics of the aerial evacuation of the sick and otorhinolaryngologically injured A82-15711

JOINTS (ANATOMY)
Computational problems in autoregressive moving average (ARMA) models N82-13698

K

KINETICS
An engineering study of bacterial kinetics and energetics N82-12740

L

LANDING INSTRUMENTS
Predictor symbology in computer-generated perspective displays N82-13674

LANDING SIMULATION
Pilot estimates of glidepath and aim point during simulated landing approaches
[NASA-TM-81325] N82-12772

LANDING SITES
Pilot estimates of glidepath and aim point during simulated landing approaches
[NASA-TM-81325] N82-12772

LEG (ANATOMY)
Structural changes in motor neurons during hind limb immobilization A82-15707

LIFE SCIENCES
From inanimate matter to living systems A82-15700
Health and safety research division
[DE81-026088] N82-13652

LIFE SUPPORT SYSTEMS
U.S. Navy molecular sieve on-board oxygen generation system - An update A82-14973

LIFT
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

LIGHT ADAPTATION
Pupillometry, a bioengineering overview N82-13711

LIGHT SCATTERING
Veiling glare reduction methods compared for ophthalmic applications A82-13209

LINGUISTICS
Linguistic and human performance considerations in the design of an anticipatory communication aid N82-13657

LIPID METABOLISM
Impaired surfactant phospholipid metabolism in hyperoxic mouse lungs A82-13230

LOGIC DESIGN
Interruption as a test of the user-computer interface N82-13721

LONG DURATION SPACE FLIGHT
Human factors of outer space production --- Book A82-15051
Psychological considerations in future space missions A82-15052
Future directions for selecting personnel --- spacecrews for long duration space flight A82-15053
Well-being and privacy in space - Anticipating conflicts of interest A82-15054
Habitat requirements, design and options --- for long duration space missions A82-15055
Nutritional criteria for closed-loop space food systems A82-15056
Rationale for evaluating a closed food chain for space habitats A82-15057

LONGITUDINAL CONTROL
An analytical approach for predicting pilot induced oscillations N82-13688
A model for the submarine depthkeeping team N82-13689

LOOPS
The magnetostatic force produced by current loops and is medical applications N82-12748

LOW FREQUENCIES
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

LUNGS
Impaired surfactant phospholipid metabolism in hyperoxic mouse lungs A82-13230
Steady-state vascular responses to graded hypoxia in isolated lungs of five species A82-13231

M

MAGNETIC MEASUREMENT
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

MAGNETOCARDIOGRAPHY
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

MAGNETOSTATICS
The magnetostatic force produced by current loops and is medical applications N82-12748

MAN MACHINE SYSTEMS
  SADT/SAINT simulation technique --- Structural Analysis Design Technique/System Analysis of Integrated Network of Tasks for man-machine systems A82-14677
  Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators A82-14837
  Human control and regulation tasks N82-12787
  The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis N82-13058
  Proceedings of the Seventeenth Annual Conference on Manual Control [NASA-CR-165005] N82-13665
  Supervisory control of remote manipulation: A preliminary evaluation N82-13675
  Research issues in implementing remote presence in teleoperator control N82-13676
  The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback N82-13677
  Man/machine interface development for the REMOTEX concept N82-13678
  Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679
  The influence of motion cues on driver-vehicle performance in a simulator N82-13681
  Multiple man-machine interfaces N82-13682
  Decision aids for airborne intercept operations in advanced aircrafts N82-13683
  Using rewards and penalties to obtain desired subject performance N82-13684
  A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694
  Information and display requirements for aircraft terrain following N82-13695
  A data collection scheme for identification of parameters in a driver model N82-13696
  Multi-axis manual controllers: A state-of-the-art report N82-13701
  Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
  The influence of ship motion of manual control skills N82-13703
  The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
  Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707
  Manual control analysis of drug effects on driving performance N82-13709
  Human supervision and microprocessor control of an optical tracking system N82-13715
  A theory of human error N82-13716
  Stability analysis of automobile driver steering control N82-13717
  Detecting human operator impairment with a psychomotor task N82-13718
  A comparison of head and manual control for a position-control pursuit tracking task N82-13720
  Interruption as a test of the user-computer interface N82-13721
  A model for the control mode man-computer interface dialogue N82-13722
  Taxonomy of the human factors in man machine systems N82-13726

MANIPULATORS
  Articulated hands - Force control and kinematic issues A82-13110
  Automatic planning of manipulator transfer movements A82-15391
  Multi-axis manual controllers: A state-of-the-art report N82-13701
  Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
  The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
  Design and development of a six degree of freedom hand controller N82-13706
  Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707

MANNED SPACE FLIGHT
  Human factors of outer space production --- Book A82-15851

MANUAL CONTROL
  Cybernetics and car driving: A mathematical (computer) model for the system to be controlled [IZF-1980-4] N82-12775
  Levels of steering control: Reproduction of steering wheel movements [IZF-1980-16] N82-12777
  Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled [IZF-1980-19] N82-12778
  Human control and regulation tasks N82-12787
  Proceedings of the Seventeenth Annual Conference on Manual Control [NASA-CR-165005] N82-13665
  Pupillometric measurement of operator workload N82-13666
  The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667
  A study on task difficulty and acceleration stress N82-13668
  Subjective rating scales as a workload N82-13669
  Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670
  Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671
  Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672
  Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673
  Predictor symbology in computer-generated perspective displays N82-13674
  Multi-axis manual controllers: A state-of-the-art report N82-13701
  Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
  The influence of ship motion of manual control skills N82-13703
  The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
  Computer aided manual tracking N82-13705

Design and development of a six degree of freedom head controller
N82-13706

Manual control analysis of drug effects on driving performance
N82-13709

A theory of human error
N82-13716

Stability analysis of automobile driver steering control
N82-13717

A comparison of head and manual control for a position-control pursuit tracking task
N82-13720

MARKING

Structure of the knowledge base for an expert labeling system
N82-13723

MARKOV PROCESSES

A systems analysis of the saturation of sleep using a semi-Markov model
N82-13658

MATHEMATICAL MODELS

A single-channel model does not predict visibility of asynchronous gratings
A82-15358

Mathematical model of the spatial distribution and accumulation of assimilates in plants
A82-15702

Medical diagnostic application of radiofrequency range electromagnetic waves
N82-12746

A Monte Carlo study of the use of auxiliary information in the developent of an impact acceleration injury prediction model
[AD-A105463] N82-12755

Measurement of gonadal and bone-marrow doses from dental radiography
[ARL/TR-022] N82-12761

Cybernetics and car driving: A driver model and its experimental validation
[IZF-1980-13] N82-12776

Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665

On the internal target model in a tracking task
N82-13700

MEDICAL ELECTRONICS

The magnetostatic force produced by current loops and is medical applications
N82-12748

MEDICAL SCIENCE

Compilation of cell data bank for automation in diagnostic cytology
[BMFT-FB-T-80-158] N82-12742

Inventory of medical technological research in the Netherlands
N82-12767

Health and safety research division
[DE81-026088] N82-13652

MENTAL PERFORMANCE

The cognitive demands of second order manual control: Applications of the event related brain potential
N82-13667

METABOLISM

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

MICROBIOLOGY

An engineering study of bacterial kinetics and energetics
N82-12740

MICROPROCESSORS

Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators
A82-14837

Human supervision and microprocessor control of an optical tracking system
N82-13715

MICROWAVES

Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves
A82-14347

Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation
A82-14348

MIDDLE EAR

The frequency of vestibular impairments in chronic purulent medial otitis
A82-15710

MILITARY AIRCRAFT

U.S. Navy molecular sieve on-board oxygen generation system - An update
A82-14973

MISSILE TRACKING

Modeling human tracking error in several different anti-tank systems
N82-13699

On the internal target model in a tracking task
N82-13700

MITOCHONDRIA

Removal by negative air ions of changes in mitochondrial respiration under stress
A82-15716

MOLECULAR STRUCTURE

Are there structural analogies between amino acids and nucleic acids
A82-13840

Chirality of electrons from beta-decay and the left-handed asymmetry of proteins
A82-13845

MONITORS

A monitor for noninvasive estimation of pulmonary blood flow
N82-13656

MONTE CARLO METHOD

A Monte Carlo study of the use of auxiliary information in the developent of an impact acceleration injury prediction model
[AD-A105463] N82-12755

Modeling human tracking error in several different anti-tank systems
N82-13699

On the internal target model in a tracking task
N82-13700

MOTION PERCEPTION

Close-range cine-photogrammetry: A generalized technique for quantifying gross human motion
N82-12781

MOTION SIMULATORS

The influence of motion cues on driver-vehicle performance in a simulator
N82-13681

The influence of ship motion of manual control skills
N82-13703

MOTIVATION

Using rewards and penalties to obtain desired subject performance
N82-13684

MULTIPHOTON ABSORPTION

Analytical detection of organic species by means of laser-induced multiphoton ionization
N82-13646

MUSCLES

Oxygen deficiency in tissues and their blood supply
A82-13700

DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353

Neurotrophic factor - Characterization and partial purification
A82-15698

MUSCULAR FUNCTION

Management by means of muscular activity under unloaded conditions
A82-15712

Benefits of detailed models of muscle activation and mechanics
N82-13713

MUSCULOSKELETAL SYSTEM

Quantitation of tissue loss during prolonged space flight
[NASA-CR-167460] N82-12752

MYOCARDIUM

Effect of exhaustive exercise on myocardial performance
A82-13228

Algorithms for imaging myocardial blood flow using X-ray computed tomography
N82-13661

N

NAVIGATION AIDS
Horizontal conflict resolution maneuvers with a cockpit display of traffic information
N82-13671

NEAR FIELDS
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions
A82-13175

NERVES
The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat
A82-15475

Neurotrophic factor - Characterization and partial purification
A82-15698

NERVOUS SYSTEM
Transcutaneous electrical peripheral nerve stimulation: Implications for neural control mechanisms
N82-12749

Functional structure and dynamics of the human nervous system
N82-13692

NEUROMUSCULAR TRANSMISSION
Structural changes in motor neurons during hind limb immobilization
A82-15707

Computational problems in autoregressive moving average (ARMA) models
N82-13698

Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712

Benefits of detailed models of muscle activation and mechanics
N82-13713

NEURONS
Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn
A82-15352

Structural changes in motor neurons during hind limb immobilization
A82-15707

NEUROPHYSIOLOGY
The influence of scopolamine on the formation and fixation of temporary connections in rats with altered brain serotonin levels
A82-15701

NEUROTRANSMITTERS
Neurotrophic factor - Characterization and partial purification
A82-15698

Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain
[NDRE/PUBL-81/1001] N82-12738

Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

NEWTON-RAPHSON METHOD
A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model
N82-13694

NITROGEN
Central venous bubbles and mixed venous nitrogen in goats following decompression
A82-13234

The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure
A82-15351

Influence of 15-day alimentary starvation on human tolerance to the breathing of pure nitrogen
A82-15710

NOCTURNAL VARIATIONS
Dynamics of plant physiological activity during a light interruption of the dark period of the day
A82-15705

NOISE INJURIES
Damage risk criteria for impulse noise --- industrial deafness
[IZF-1980-26] N82-12771

NOISE INTENSITY
Aircraft noise and speech communication interference in JASDF air traffic control room
A82-15518

NOISE METERS
An investigation of the status of bone conduction audiometer calibration in the National Health Service
[NPL-AC-101] N82-12769

NOISE REDUCTION
Aircraft noise and speech communication interference in JASDF air traffic control room
A82-15518

NOISE THRESHOLD
Damage risk criteria for impulse noise --- industrial deafness
[IZF-1980-26] N82-12771

NOSE (ANATOMY)
Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15719

NUCLEAR POWERED SHIPS
Work and rest on nuclear submarines
A82-14274

NUCLEIC ACIDS
Are there structural analogies between amino acids and nucleic acids
A82-13840

Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn
A82-15352

DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353

NUCLEOTIDES
A working hypothesis on the interdependent genesis of nucleotide bases, protein amino acids, and primitive genetic code
A82-13839

NUTRITIONAL REQUIREMENTS
Influence of 15-day alimentary starvation on human tolerance to the breathing of pure nitrogen
A82-15710

Nutritional criteria for closed-loop space food systems
A82-15856

O

OCULOMOTOR NERVES
Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control
A82-15280

OPERATOR PERFORMANCE
Validating manned system design and engineering change proposals
A82-14703

Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems
A82-14839

Cybernetics and car driving: A driver model and its experimental validation
[IZF-1980-13] N82-12776

Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled
[IZF-1980-19] N82-12778

Equipment design must incorporate ease of operation
N82-12790

A study on task difficulty and acceleration stress
N82-13668

Research issues in implementing remote presence in teleoperator control
N82-13676

Two-D results on human operator perception
N82-13697

Modeling human tracking error in several different anti-tank systems
N82-13699

On the internal target model in a tracking task N82-13700

Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707

Manual control analysis of drug effects on driving performance N82-13709

Human supervision and microprocessor control of an optical tracking system N82-13715

A theory of human error N82-13716

Stability analysis of automobile driver steering control N82-13717

Detecting human operator impairment with a psychomotor task N82-13718

A comparison of head and manual control for a position-control pursuit tracking task N82-13720

Interruption as a test of the user-computer interface N82-13721

A model for the control mode man-computer interface dialogue N82-13722

OPHTHALMOLOGY

Veiling glare reduction methods compared for ophthalmic applications A82-13289

OPTICAL TRACKING

Effects of extended practice on dual-task tracking performance A82-12875

The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667

A study on task difficulty and acceleration stress N82-13668

Subjective rating scales as a workload N82-13669

Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670

Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672

Using rewards and penalties to obtain desired subject performance N82-13684

Two-D results on human operator perception N82-13697

Computer aided manual tracking N82-13705

Human supervision and microprocessor control of an optical tracking system N82-13715

OPTIMAL CONTROL

An analytical approach for predicting pilot induced oscillations N82-13688

A model for the submarine depthkeeping team N82-13689

On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694

Information and display requirements for aircraft terrain following N82-13695

On the internal target model in a tracking task N82-13700

A model of the human observer and decision maker N82-13714

A comparison of head and manual control for a position-control pursuit tracking task N82-13720

ORGAN WEIGHT

Quantitation of tissue loss during prolonged space flight [NASA-CR-167460] N82-12752

ORGANIC COMPOUNDS

On the place of organic life in the universe and the possibility of extraterrestrial life A82-13825

Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update [PB81-232811] N82-13655

ORTHOGONAL FUNCTIONS

Two-D results on human operator perception N82-13697

ORTHOSTATIC TOLERANCE

The application of a combined passive orthostatic test in the flight medical examination A82-13550

Rhinopneumometric indicators during repeated antiorthostatic exposures A82-15719

OSCILLATIONS

An analytical approach for predicting pilot induced oscillations N82-13688

OTOLARYNGOLOGY

Some characteristics of the aerial evacuation of the sick and otorhinolaryngologically injured A82-15711

OTOLITH ORGANS

The otolith reflex and space perception in cosmonauts A82-15717

OTOLOGY

The frequency of vestibular impairments in chronic purulent medial otitis A82-15718

OXYGEN

Experimental studies on the survival capacity in the sealed environment. III A82-15515

Oxygen toxicity and lung collagenous protein [AD-A104702] N82-12756

OXYGEN BREATHING

The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure A82-15351

OXYGEN METABOLISM

Oxygen deficiency in tissues and their blood supply A82-13700

The classification of hypoxic conditions A82-15708

OXYGEN SUPPLY EQUIPMENT

U.S. Navy molecular sieve on-board oxygen generation system - An update A82-14973

OXYGEN TENSION

Steady-state vascular responses to graded hypoxia in isolated lungs of five species A82-13231

The oxygen regime of the human organism under conditions of extreme hypobaric hypoxia A82-15709

OZONOSPHERE

Biologically damaging radiation amplified by ozone depletions A82-15786

P

PAIN

Transcutaneous electrical peripheral nerve stimulation: Implications for neural control mechanisms N82-12749

PARACHUTE DESCENT

The physiological response of anthropometrically selected female military personnel to the test parachuting environment A82-14957

An investigation of ripcord pull force capability of male and female skydivers for ripcords located on the left main lift web at chest level A82-14959

PARACHUTING INJURY

System to measure head motion during parachute opening shock [AIAA PAPER 81-2517] A82-13914

PARAMETER IDENTIFICATION
A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model
N82-13694
A data collection scheme for identification of parameters in a driver model
N82-13696

PARTICLE SIZE DISTRIBUTION
Deposition of aerosol particles in the human respiratory tract
N82-13659

PATHOLOGICAL EFFECTS
Hypoxic vasoconstriction and fluid filtration in pig lungs
A82-13226
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706

PATTERN RECOGNITION
The efficiency of detecting triber patterns modulated in random dot density
[IZF-1980-25] N82-12779
Structure of the knowledge base for an expert labeling system
N82-13723

PEPTIDES
Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions
A82-13843

PERCEPTUAL ERRORS
Pilot estimates of glidepath and aim point during simulated landing approaches
[NASA-TM-81325] N82-12772
A theory of human error
N82-13716

PERFORMANCE TESTS
Eye movement measurement of readability of CRT displays
A82-12869
An evaluation of alphanumeric, graphic, and color information displays
A82-12871
Effects of extended practice on dual-task tracking performance
A82-12875
A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots
A82-15813

PERSONNEL SELECTION
Psychological considerations in future space missions
A82-15852
Future directions for selecting personnel --- spacecrews for long duration space flight
A82-15853
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102085] N82-13725

PERSPIRATION
Sweating responses of men and women during exercise in humid and dry heat
N82-12745

PHOSPHATES
Constant AMP synthesis in aqueous solution by electric discharges --- simulating primitive earth conditions
A82-13842

PHOTOCHEMICAL REACTIONS
Molecular complexes of amino acids with porphyrins as possible precursors of pigment-protein systems
A82-13841

PHOTOGRAMMETRY
Close-range cine-photogrammetry: A generalized technique for quantifying gross human motion
N82-12701

PHOTON DENSITY
Measurement of the bone mineral density of trabecular bone by a coherent and Compton scattering technique
N82-12747

PHOTOSYNTHESIS
Mathematical model of the spatial distribution and accumulation of assimilates in plants
A82-15702
Dynamics of plant physiological activity during a light interruption of the dark period of the day
A82-15705
Higher plant acclimation to solar ultraviolet-B radiation
N82-12737

PHYSICAL EXERCISE
Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans
A82-13233
Cardiovascular responses to mixed static and dynamic exercise
A82-14803
Management by means of muscular activity under unloaded conditions
A82-15712

PHYSIOLOGICAL EFFECTS
Visual fatigue and cathode ray tube display terminals
A82-12870
Effects of visual display units on the eyes - A bibliography /1972-1980/
A82-12873
The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat
A82-15475
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706
The classification of hypoxic conditions
A82-15708
Well-being and privacy in space - Anticipating conflicts of interest
A82-15854
Sweating responses of men and women during exercise in humid and dry heat
N82-12745

PHYSIOLOGICAL FACTORS
In-flight physiological monitoring of tactical jet aircrewmen
A82-14962

PHYSIOLOGICAL RESPONSES
Changes in the heat resistance of rats under various regimes of cold adaptation
A82-12952
Effect of exhaustive exercise on myocardial performance
A82-13228
Effects of rib cage or abdominal restriction on lung mechanics
A82-13229
Steady-state vascular responses to graded hypoxia in isolated lungs of five species
A82-13231
Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days
A82-13232
ACTH and cortisol responses to hypoxia in dogs
A82-13235
Artificial hypobiosis as a stable functional state of reduced vital activity
A82-13699
Diurnal variation in vigilance efficiency
A82-14275
Cardiovascular responses to mixed static and dynamic exercise
A82-14803
The physiological response of anthropometrically selected female military personnel to the test parachuting environment
A82-14957
The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure
A82-15351
Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn
A82-15352
DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353
Performance changes during exposure to +Gz stress
A82-15517
EEG-correlates of training in the voluntary control of heart rate in man
A82-15703

- Dynamics of plant physiological activity during a light interruption of the dark period of the day A82-15705
- The oxygen regime of the human organism under conditions of extreme hypobaric hypoxia A82-15709
- The nature of induced EEG activity in the alpha-rhythm range A82-15713
- Mechanisms of temporal discrimination in the visual analyzer A82-15714
- Gastrointestinal allergy in the experimental animal: The use of radioiodinated serum albumin in the assessment of new drugs [IAEA-R-2067-F] N82-12741
- Sweating responses of men and women during exercise in humid and dry heat N82-12745
- Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13653

PHYSIOLOGICAL TESTS

- The application of a combined passive orthostatic test in the flight medical examination A82-13550
- Gamma facilities for radiobiological investigations /Design and experimental results/ --- Russian book A82-14674
- The physiological response of anthropometrically selected female military personnel to the test parachuting environment A82-14957

PILOT ERROR

- Pilot estimates of glidepath and aim point during simulated landing approaches [NASA-TM-81325] N82-12772

PILOT PERFORMANCE

- A study of performance effects under G stress A82-14805
- A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots A82-15813
- Review of human and operational factors affecting the feasibility of the see-and-avoid concept [DFVLR-MITT-81-13] N82-12780
- An investigation into pilot and system response to critical in-flight events. Volume 1: Executive summary [NASA-CR-164993] N82-12782
- An investigation into pilot and system response to critical in-flight events. Volume 2: Appendix [NASA-CR-164994] N82-12783
- Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062
- An investigation into pilot and system response to critical in-flight events, volume 1 [NASA-CR-166243-VOL-1] N82-13662
- An investigation into pilot and system response to critical in-flight events, volume 2 [NASA-CR-166243-VOL-2] N82-13663
- Visual/motion cue mismatch in a coordinated roll maneuver [NASA-CR-166259] N82-13664
- Multiple man-machine interfaces N82-13682
- Decision aids for airborne intercept operations in advanced aircrafts N82-13683
- A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685
- Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686
- An analytical approach for predicting pilot induced oscillations N82-13688
- Comparison of closed loop model with flight test results N82-13691
- A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694
- Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
- The influence of ship motion of manual control skills N82-13703
- The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
- Computer aided manual tracking N82-13705
- Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710

PILOT SELECTION

- A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination A82-15520

PILOT TRAINING

- A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots A82-15813

PILOTS (PERSONNEL)

- The heart rate of aspirant air pilots in a hypobaric chamber [IZP-1979-35] N82-12770

PLANETARY EVOLUTION

- From inanimate matter to living systems A82-15700

PLANTS (BOTANY)

- Mathematical model of the spatial distribution and accumulation of assimilates in plants A82-15702
- Dynamics of plant physiological activity during a light interruption of the dark period of the day A82-15705
- Higher plant acclimation to solar ultraviolet-B radiation N82-12737

PLETHYSMOGRAPHY

- The measurements of fluid shifts and of the tissue compliance along body axis in man [BMFT-FB-W-80-011] N82-13654

POLARIZED LIGHT

- Veiling glare reduction methods compared for ophthalmic applications A82-13239

POLYMERIZATION

- An engineering study of bacterial kinetics and energetics N82-12740

POLYNUCLEAR ORGANIC COMPOUNDS

- Identification and toxicity of fractionated-shale-oil components [DE81-028460] N82-12766

POLYNUCLEOTIDES

- Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions A82-13843

POLYSTYRENE

- Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner A82-15519

PORPHYRINS

- Molecular complexes of amino acids with porphyrins as possible precursors of pigment-protein systems A82-13841

PREDICTION ANALYSIS TECHNIQUES

- A Monte Carlo study of the use of auxiliary information in the developent of an impact acceleration injury prediction model [AD-A105463] N82-12755

PRESSURE CHAMBERS

- The heart rate of aspirant air pilots in a hypobaric chamber [IZP-1979-35] N82-12770

PRESSURE EFFECTS

- The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure A82-15351

The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat A82-15475
Evaluation of natural convection under hyperbaric conditions A82-15720

PRESSURE GRADIENTS
Effects of rib cage or abdominal restriction on lung mechanics A82-13229

PRESSURE PULSES
Damage risk criteria for impulse noise --- industrial deafness [IZF-1980-26] N82-12771

PRIMITIVE EARTH ATMOSPHERE
Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment A82-14197

PRIVACY
Well-being and privacy in space - Anticipating conflicts of interest A82-15854

PROCESS CONTROL (INDUSTRY)
Human control and regulation tasks N82-12787

PROPRIOCEPTION
Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control A82-15280

PROTECTIVE CLOTHING
Anti-exposure technology identification for mission specific operational requirements [AD-A105070] N82-12784
Zipper rear closure endurance testing [AD-A104732] N82-12785
Anthropometric sizing systems for Army women's field clothing [AD-A102104] N82-13724

PROTECTIVE COATINGS
Mitigation of biofouling using coatings [DE81-027900] N82-13647

PROTEIN SYNTHESIS
Impaired surfactant phospholipid metabolism in hyperoxic mouse lungs A82-13230
Constant AMP synthesis in aqueous solution by electric discharges --- simulating primitive earth conditions A82-13842
Effect of polynucleotides on the dimerization of glycine --- abiological protein synthesis in primitive earth conditions A82-13843

PROTEINS
Chirality of electrons from beta-decay and the left-handed asymmetry of proteins A82-13845
Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn A82-15352
Oxygen toxicity and lung collagenous protein [AD-A104702] N82-12756

PROTOBIOLOGY
A working hypothesis on the interdependent genesis of nucleotide bases, protein amino acids, and primitive genetic code A82-13839
Primordial transport of sugars and amino acids via Schiff bases --- role in the origin of an early protocell A82-13844
Chemical evolution and the origin of life - Bibliography supplement 1979 A82-13846
From inanimate matter to living systems A82-15700

PSYCHOLOGICAL FACTORS
Psychological considerations in future space missions A82-15852
Future directions for selecting personnel --- spacecrews for long duration space flight A82-15853

PSYCHOMOTOR PERFORMANCE
Levels of steering control: Reproduction of steering wheel movements [IZF-1980-16] N82-12777
Using rewards and penalties to obtain desired subject performance N82-13684
Detecting human operator impairment with a psychomotor task N82-13718

PSYCHOPHYSIOLOGY
Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control A82-15280

PULMONARY CIRCULATION
Hypoxic vasoconstriction and fluid filtration in pig lungs A82-13226
Three-dimensional stress distribution in arteries: Radial compression experiments of arterial wall; stress concentration in lung near a cylindrical cavity; finite element analysis of pleural surface pressure distribution in dog's lung during electrophrenic stimulation N82-12750
Oxygen toxicity and lung collagenous protein [AD-A104702] N82-12756
A monitor for noninvasive estimation of pulmonary blood flow N82-13656

PULMONARY FUNCTIONS
Effects of rib cage or abdominal restriction on lung mechanics A82-13229
Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days A82-13232
Digital spirometer for automatic pulmonary function A82-14746

PULMONARY LESIONS
Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days A82-13232

PUPILLOMETRY
Pupillometric measurement of operator workload N82-13666
Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670
Pupillometry, a bioengineering overview N82-13711

PURIFICATION
Neurotrophic factor - Characterization and partial purification A82-15698

PURSUIT TRACKING
Performance changes during exposure to +Gz stress A82-15517

Q

Q SWITCHED LASERS
Holographic laser eye protection A82-14971

QUANTITATIVE ANALYSIS
Method and apparatus for detecting coliform organisms [NASA-CASE-ARC-11322-1] N82-12739

R

RADAR TRACKING
Decision aids for airborne intercept operations in advanced aircrafts N82-13683

RADIANT COOLING
Thermoregulatory responses to local convective and radiative cooling A82-12951

RADIATION ABSORPTION
Chemical protection of cells in culture and mice against X-irradiation [NBL-1979-2] N82-12743

RADIATION CHEMISTRY
Radiation effects on living systems. A bibliography of AECL publications [AECL-6797] N82-12759

RADIATION DAMAGE
- Biologically damaging radiation amplified by ozone depletions A82-15788
- Repair of chemical damage in mammalian cells [DE81-030823] N82-12757

RADIATION DOSAGE
- Biological effects of low doses of ionizing radiation: Three review papers [AECL-7059] N82-12758
- Gonadal doses from radiotherapy [ARL/TR-020] N82-12762
- Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes [ARL/TR-023] N82-12763
- Contributions to the genetic and mean bone-marrow doses of the Australian population from radiological procedures [ARL/TR-017] N82-12764
- Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation [ARL-TR-021] N82-13651

RADIATION EFFECTS
- Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves A82-14347
- Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation A82-14348
- Radiation effects on living systems. A bibliography of AECL publications [AECL-6797] N82-12759

RADIATION HAZARDS
- Biologically damaging radiation amplified by ozone depletions A82-15788

RADIATION PROTECTION
- Habitat requirements, design and options --- for long duration space missions A82-15855
- Chemical protection of cells in culture and mice against X-irradiation [MDL-1979-2] N82-12743
- Overview of the biomedical and environmental programs at the Oak Ridge National Laboratory [DE81-027864] N82-12765

RADIATION THERAPY
- Gonadal doses from radiotherapy [ARL/TR-020] N82-12762
- Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation [ARL-TR-021] N82-13651

RADIATIVE HEAT TRANSFER
- Thermoregulatory responses to local convective and radiative cooling A82-12951

RADIO COMMUNICATION
- Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems A82-14839

RADIO FREQUENCIES
- Medical diagnostic application of radiofrequency range electromagnetic waves N82-12746

RADIOACTIVE ISOTOPES
- Studies in erythropoiesis: The influence of the glycocalyx of the red cell membrane [DE81-030668] N82-12760
- Genetic and mean bone-marrow doses from medical use of unsealed radioisotopes [ARL/TR-023] N82-12763

RADIOBIOLOGY
- An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions A82-13175
- Gamma facilities for radiobiological investigations /Design and experimental results/ --- Russian book A82-14674
- Radiation effects on living systems. A bibliography of AECL publications [AECL-6797] N82-12759

RADIOGRAPHY
- Measurement of gonadal and bone-marrow doses from dental radiography [ARL/TR-022] N82-12761
- Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation [ARL-TR-021] N82-13651

RADIOLOGY
- Contributions to the genetic and mean bone-marrow doses of the Australian population from radiological procedures [ARL/TR-017] N82-12764

RADIOMETERS
- The theory of radiometric contact measurements of the internal temperature of bodies --- for human body A82-13636

RANDOM SIGNALS
- The efficiency of detecting tribar patterns modulated in random dot density [IZF-1980-25] N82-12779

RANDOM VIBRATION
- Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13653

REACTION PRODUCTS
- Mathematical model of the spatial distribution and accumulation of assimilates in plants A82-15702

REACTION TIME
- Using rewards and penalties to obtain desired subject performance N82-13684
- Load compensating reactions to perturbations at wrist joint in normal man N82-13708

READING
- Eye movement measurement of readability of CRT displays A82-12869

REAL TIME OPERATION
- Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680
- Decision aids for airborne intercept operations in advanced aircrafts N82-13683

RECEPTORS (PHYSIOLOGY)
- Autonomic mechanisms of training bradycardia - Beta-adrenergic receptors in humans A82-13233

REFLEXES
- Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR) N82-13712

REMOTE CONTROL
- Articulated hands - Force control and kinematic issues A82-13110
- Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673
- Man/machine interface development for the REMOTEX concept N82-13678
- Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679

REMOTE HANDLING
- Research issues in implementing remote presence in teleoperator control N82-13676
- Man/machine interface development for the REMOTEX concept N82-13678
- Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679
- Multi-axis manual controllers: A state-of-the-art report N82-13701
- Design and development of a six degree of freedom hand controller N82-13706

**RESEARCH AND DEVELOPMENT**
Inventory of medical technological research in the Netherlands
N82-12767
**RESEARCH MANAGEMENT**
Biomedical research
[NASA-CR-3487] N82-12751
**RESPIRATION**
Medical diagnostic application of radiofrequency range electromagnetic waves
N82-12746
**RESPIRATORY PHYSIOLOGY**
Effects of rib cage or abdominal restriction on lung mechanics
A82-13229
Steady and unsteady pressure-flow relations in bronchial tree models
A82-14804
**RESPIRATORY RATE**
Removal by negative air ions of changes in mitochondrial respiration under stress
A82-15716
**RESPIRATORY SYSTEM**
Oxygen toxicity and lung collagenous protein
[AD-A104702] N82-12756
Deposition of aerosol particles in the human respiratory tract
N82-13659
**RESPONSE BIAS**
Modeling human tracking error in several different anti-tank systems
N82-13699
**RESPONSE TIME (COMPUTERS)**
An evaluation of alphanumeric, graphic, and color information displays
A82-12871
Identification of the adaptive feedback of the human motor system using the response difference method
N82-12754
**RETINA**
The sensitivity of the retinal nerve fibre layer to elevated intraocular pressure and graded hypoxia in the cat
A82-15475
**RHYTHM (BIOLOGY)**
The nature of induced EEG activity in the alpha-rhythm range
A82-15713
Potential for the use of biorhythm structures for the prognosis of the course of a disease
A82-15715
A systems analysis of the saturation of sleep using a semi-Markov model
N82-13658
**RISK**
Damage risk criteria for impulse noise --- industrial deafness
[IZF-1980-26] N82-12771
**ROBOTS**
Articulated hands - Force control and kinematic issues
A82-13110
Automatic planning of manipulator transfer movements
A82-15391
An approach to algorithms for processing data from the visual sensor of an integrated robot
A82-15681
**ROTATION**
The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation
A82-13422

## S

**SACCADIC EYE MOVEMENTS**
Pilot scanning patterns while viewing cockpit displays of traffic information
N82-13710
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712
**SAFETY DEVICES**
Holographic laser eye protection
A82-14971
Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner
A82-15519
**SAFETY FACTORS**
An investigation of ripcord pull force capability of male and female skydivers for ripcords located on the left main lift web at chest level
A82-14959
Conspicuity of observation posts at the air weapon firing ranges on the Vliehors and the Noordvaarder
[IZF-1979-33-E] N82-12774
**SAMPLING**
Method and apparatus for detecting coliform organisms
[NASA-CASE-ARC-11322-1] N82-12739
**SCALING LAWS**
Two-D results on human operator perception
N82-13697
**SCANNING**
Pilot scanning patterns while viewing cockpit displays of traffic information
N82-13710
**SEARCHING**
The interaction between the edge effect and target conspicuity in visual search
A82-12874
**SELF STIMULATION**
The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure
A82-15351
Multiple man-machine interfaces
N82-13682
**SENSITIVITY**
Gastrointestinal allergy in the experimental animal: The use of radioiodinated serum albumin in the assessment of new drugs
[IAEA-R-2067-F] N82-12741
**SENSORIMOTOR PERFORMANCE**
Identification of the adaptive feedback of the human motor system using the response difference method
N82-12754
**SENSORS**
An approach to algorithms for processing data from the visual sensor of an integrated robot
A82-15681
**SENSORY FEEDBACK**
Trouble shooting pattern of emergency through instruments by jet-pilots. II
A82-15521
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback
N82-13677
**SEROTONIN**
The influence of scopolamine on the formation and fixation of temporary connections in rats with altered brain serotonin levels
A82-15701
**SERVOMECHANISMS**
Man/machine interface development for the REMOTEX concept
N82-13678
**SEX FACTOR**
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650
**SHALE OIL**
Identification and toxicity of fractionated-shale-oil components
[DE81-028460] N82-12766
**SHIPS**
The influence of ship motion of manual control skills
N82-13703
**SICKNESSES**
Some characteristics of the aerial evacuation of the sick and otorhinolaryngologically injured
A82-15711
**SIMULATORS**
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13645
**SINE WAVES**
Influence of sine, and random, whole-body vibration on visual acuity
[BRVG-FDWT-79-17] N82-13653

SIZE DETERMINATION
The effects of binocular and motion-generated information on the perception of depth and height
A82-13423
SKIN TEMPERATURE (BIOLOGY)
Thermoregulatory responses to local convective and radiative cooling
A82-12951
SLEEP
Hypoxic arousal in intact and carotid chemodenervated sleeping cats
A82-13236
A systems analysis of the maturation of sleep using a semi-Markov model
N82-13658
SLEEP DEPRIVATION
Nucleic acid and protein concentrations in rat raphe nuclei neurons and gliocytes during complete sleep deprivation in the cylindrical tretbahn
A82-15352
SOCIAL FACTORS
Psychological considerations in future space missions
A82-15852
Well-being and privacy in space - Anticipating conflicts of interest
A82-15854
SOLAR POWER SATELLITES
Chronic exposure of a honey bee colony to 2.45 GHz continuous wave microwaves
A82-14347
Survival, development, and teratology of honey bee brood /Apis mellifera L./ following exposure to 2.45 GHz continuous wave radiation
A82-14348
SONAR
How to display digital SONAR signals. Some primary threshold measurements
[IZF-1979-16] N82-12773
SOUND LOCALIZATION
How to display digital SONAR signals. Some primary threshold measurements
[IZF-1979-16] N82-12773
SOUND TRANSMISSION
Thresholds of hearing by air conduction and by bone conduction under different masking conditions
[NPL-AC-100] N82-12768
SPACE COLONIES
Human factors of outer space production --- Book
A82-15851
Habitat requirements, design and options --- for long duration space missions
A82-15855
Rationale for evaluating a closed food chain for space habitats
A82-15857
SPACE ENVIRONMENT SIMULATION
Gamma facilities for radiobiological investigations /Design and experimental results/ --- Russian book
A82-14674
SPACE FLIGHT FEEDING
Rationale for evaluating a closed food chain for space habitats
A82-15857
SPACE FLIGHT STRESS
Future directions for selecting personnel --- spacecrews for long duration space flight
A82-15853
Well-being and privacy in space - Anticipating conflicts of interest
A82-15854
SPACE INDUSTRIALIZATION
Habitat requirements, design and options --- for long duration space missions
A82-15855
SPACE MISSIONS
Human factors of outer space production --- Book
A82-15851
Psychological considerations in future space missions
A82-15852
Habitat requirements, design and options --- for long duration space missions
A82-15855
Nutritional criteria for closed-loop space food systems
A82-15856
SPACE PERCEPTION
The effects of binocular and motion-generated information on the perception of depth and height
A82-13423
The otolith reflex and space perception in cosmonauts
A82-15717
Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled
[IZF-1980-19] N82-12778
SPACE SHUTTLE ORBITERS
Crew activities in space
N82-12129
SPACE SHUTTLE PAYLOADS
Voice control of the space shuttle video system
N82-13719
SPACECRAFT CONTROL
Design and development of a six degree of freedom hand controller
N82-13706
SPACECREWS
Future directions for selecting personnel --- spacecrews for long duration space flight
A82-15853
Nutritional criteria for closed-loop space food systems
A82-15856
Crew activities in space
N82-12129
Skylab water balance analysis
[NASA-CR-167461] N82-12753
SPACELAB
Crew activities in space
N82-12129
SPATIAL DISTRIBUTION
Mathematical model of the spatial distribution and accumulation of assimilates in plants
A82-15702
SPEECH RECOGNITION
Aircraft noise and speech communication interference in JASDF air traffic control room
A82-15518
Voice control of the space shuttle video system
N82-13719
SPINAL CORD
Structural changes in motor neurons during hind limb immobilization
A82-15707
SPIROMETERS
Digital spirometer for automatic pulmonary function
A82-14746
Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15719
SQUID (DETECTORS)
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
N82-13648
STATE VECTORS
Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled
[IZF-1980-19] N82-12778
STATISTICAL ANALYSIS
An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13662
An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13663
STATISTICAL DECISION THEORY
Detecting human operator impairment with a psychomotor task
N82-13718
STEADY STATE
The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation
A82-13422
STEERING
Levels of steering control: Reproduction of steering wheel movements
[IZF-1980-16] N82-12777
A data collection scheme for identification of parameters in a driver model
N82-13696

Manual control analysis of drug effects on driving
performance
N82-13709
Stability analysis of automobile driver steering
control
N82-13717
STEREOCHEMISTRY
Are there structural analogies between amino acids
and nucleic acids
A82-13840
STEREOPHOTOGRAPHY
System to measure head motion during parachute
opening shock
[AIAA PAPER 81-2517] A82-13914
STRAIN ENERGY METHODS
Three-dimensional stress distribution in arteries:
Radial compression experiments of arterial wall;
stress concentration in lung near a cylindrical
cavity; finite element analysis of pleural
surface pressure distribution in dog's lung
during electrophrenic stimulation
N82-12750
STRESS (PHYSIOLOGY)
The physiological response of anthropometrically
selected female military personnel to the test
parachuting environment
A82-14957
Removal by negative air ions of changes in
mitochondrial respiration under stress
A82-15716
Determination of efficient methods of lift by
comparing trained and untrained male and female
lifters
[AD-A100349] N82-13650
STRESS CONCENTRATION
Three-dimensional stress distribution in arteries:
Radial compression experiments of arterial wall;
stress concentration in lung near a cylindrical
cavity; finite element analysis of pleural
surface pressure distribution in dog's lung
during electrophrenic stimulation
N82-12750
STRESS MEASUREMENT
Three-dimensional stress distribution in arteries:
Radial compression experiments of arterial wall;
stress concentration in lung near a cylindrical
cavity; finite element analysis of pleural
surface pressure distribution in dog's lung
during electrophrenic stimulation
N82-12750
STRUCTURAL ANALYSIS
SADT/SAINT simulation technique --- Structural
Analysis Design Technique/System Analysis of
Integrated Network of Tasks for man-machine
systems
A82-14677
STRUCTURAL DESIGN
Articulated hands - Force control and kinematic
issues
A82-13110
SADT/SAINT simulation technique --- Structural
Analysis Design Technique/System Analysis of
Integrated Network of Tasks for man-machine
systems
A82-14677
Habitat requirements, design and options --- for
long duration space missions
A82-15855
SUBMARINES
A model for the submarine depthkeeping team
N82-13689
SUBSTRATES
An engineering study of bacterial kinetics and
energetics
N82-12740
SUGARS
Primordial transport of sugars and amino acids via
Schiff bases --- role in the origin of an early
protocell
A82-13844
SURFACE FINISHING
Mitigation of biofouling using coatings
[DE81-027900] N82-13647
SURVIVAL
Experimental studies on the survival capacity in
the sealed environment. III
A82-15515
SYNAPSES
Neurotransmitter function in the basal ganglia
after acute and chronic ethanol treatment
[AD-A103744] N82-13649
SYSTEMS ANALYSIS
SADT/SAINT simulation technique --- Structural
Analysis Design Technique/System Analysis of
Integrated Network of Tasks for man-machine
systems
A82-14677
Supervisory control of remote manipulation: A
preliminary evaluation
N82-13675
SYSTEMS ENGINEERING
Validating manned system design and engineering
change proposals
A82-14703
The intelligent use of intelligent systems:
Problems in engineering man/machine symbiosis
N82-13058
SYSTEMS MANAGEMENT
Cybernetics and car driving: A mathematical
(computer) model for the system to be controlled
[IZF-1980-4] N82-12775
Simple geometric algorithms to aid in clearance
management for robotic mechanisms
N82-13680
SYSTEMS SIMULATION
SADT/SAINT simulation technique --- Structural
Analysis Design Technique/System Analysis of
Integrated Network of Tasks for man-machine
systems
A82-14677
SYSTOLIC PRESSURE
Comparison of impedance ventricular function
indices with systolic time intervals
A82-14806

T

TABLES (DATA)
Compilation of cell data bank for automation in
diagnostic cytology
[BMFT-FB-T-80-158] N82-12742
Inventory of medical technological research in the
Netherlands
N82-12767
TARGET RECOGNITION
The interaction between the edge effect and target
conspicuity in visual search
A82-12874
How to display digital SONAR signals. Some
primary threshold measurements
[IZF-1979-16] N82-12773
The efficiency of detecting tribar patterns
modulated in random dot density
[IZF-1980-25] N82-12779
Decision aids for airborne intercept operations in
advanced aircrafts
N82-13683
Modeling human tracking error in several different
anti-tank systems
N82-13699
TARGETS
Some effects of Field Of View (FOV) and target
size on lateral tracking at hover
N82-13672
TASK COMPLEXITY
Evaluation of imbedded radio communications
activities as secondary tasks for objective
assessment of aircrew workload in simulators,
trainers, and actual systems
A82-14839
A comparison of single- and dual-task measures to
predict simulator performance of beginning
student pilots
A82-15813
Evaluation of a pilot workload assessment device
to test alternate display formats and control
handling qualities
N82-13062
Two-D results on human operator perception
N82-13697
TAXONOMY
Taxonomy of the human factors in man machine systems
N82-13726
TECHNOLOGY ASSESSMENT
China report: Science and technology, no. 128
[JPRS-79047] N82-12789

Health and safety research division
[DE81-026088] N82-13652
Multi-axis manual controllers: A state-of-the-art report
N82-13701
TECHNOLOGY TRANSFER
China report: Science and technology, no. 128
[JPRS-79047] N82-12789
TECHNOLOGY UTILIZATION
Methodical study of the contribution of the human system to the insecurity of technological systems --- computerized accident analysis
N82-12788
China report: Science and technology, no. 128
[JPRS-79047] N82-12789
TELEOPERATORS
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Research issues in implementing remote presence in teleoperator control
N82-13676
Man/machine interface development for the REMOTEX concept
N82-13678
Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679
Simple geometric algorithms to aid in clearance management for robotic mechanisms
N82-13680
TELEVISION SYSTEMS
Voice control of the space shuttle video system
N82-13719
TEMPERATURE EFFECTS
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706
TEMPERATURE MEASUREMENT
The theory of radiometric contact measurements of the internal temperature of bodies --- for human body
A82-13636
TEMPORAL DISTRIBUTION
Mechanisms of temporal discrimination in the visual analyzer
A82-15714
TERRAIN FOLLOWING AIRCRAFT
Information and display requirements for aircraft terrain following
N82-13695
TEST CHAMBERS
Experimental studies on the survival capacity in the sealed environment. III
A82-15515
TEST FACILITIES
Gamma facilities for radiobiological investigations /Design and experimental results/ --- Russian book
A82-14674
TEST RANGES
Conspicuity of observation posts at the air weapon firing ranges on the Vliehors and the Noordvaarder
[IZF-1979-33-E] N82-12774
THERMAL COMFORT
Thermal test of flying helmet for two different types of impact protection devices - Nylon sling and polystyrene liner
A82-15519
THERMAL EMISSION
The theory of radiometric contact measurements of the internal temperature of bodies --- for human body
A82-13636
THERMAL PROTECTION
Evaluation of natural convection under hyperbaric conditions
A82-15720
THERMOREGULATION
Thermoregulatory responses to local convective and radiative cooling
A82-12951
Changes in the heat resistance of rats under various regimes of cold adaptation
A82-12952
Arm and leg intravascular temperatures of man during submaximal exercise
A82-13227
THREE DIMENSIONAL MOTION
Automatic planning of manipulator transfer movements
A82-15391
THRESHOLDS (PERCEPTION)
Thresholds of hearing by air conduction and by bone conduction under different masking conditions
[NPL-AC-100] N82-12768
How to display digital SONAR signals. Some primary threshold measurements
[IZF-1979-16] N82-12773
The efficiency of detecting tribar patterns modulated in random dot density
[IZF-1980-25] N82-12779
TIME DEPENDENCE
Comparison of impedance ventricular function indices with systolic time intervals
A82-14806
TIME OPTIMAL CONTROL
Modeling human tracking error in several different anti-tank systems
N82-13699
TIME SERIES ANALYSIS
Computational problems in autoregressive moving average (ARMA) models
N82-13698
TISSUES (BIOLOGY)
Oxygen deficiency in tissues and their blood supply
A82-13700
Quantitation of tissue loss during prolonged space flight
[NASA-CR-167460] N82-12752
The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654
TOLERANCES (PHYSIOLOGY)
Damage risk criteria for impulse noise --- industrial deafness
[IZF-1980-26] N82-12771
TOMOGRAPHY
Algorithms for imaging myocardial blood flow using X-ray computed tomography
N82-13661
TORQUE
Computational problems in autoregressive moving average (ARMA) models
N82-13698
TORQUERS
Experimental results with a six-degree-of-freedom force-reflecting hand controller
N82-13707
TOUCH
Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control
A82-15280
TOXIC HAZARDS
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655
TOXICITY
Oxygen toxicity and lung collagenous protein
[AD-A104702] N82-12756
Identification and toxicity of fractionated-shale-oil components
[DE81-028460] N82-12766
TRACKING (POSITION)
Effects of extended practice on dual-task tracking performance
A82-12875
A study of performance effects under G stress
A82-14805
A comparison of head and manual control for a position-control pursuit tracking task
N82-13720
TRAINING SIMULATORS
A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots
A82-15813
A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight
N82-13685
TRANSFER FUNCTIONS
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback
N82-13677

TRANSPORT AIRCRAFT
  Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports
  N82-13687
TRANSPORT PROPERTIES
  Primordial transport of sugars and amino acids via Schiff bases --- role in the origin of an early protocell
  A82-13884

U

ULTRASONIC TESTS
  The measurements of fluid shifts and of the tissue compliance along body axis in man
  [BMFT-FB-W-80-011] N82-13654
ULTRAVIOLET ABSORPTION
  Higher plant acclimation to solar ultraviolet-B radiation
  N82-12737
ULTRAVIOLET RADIATION
  Biologically damaging radiation amplified by ozone depletions
  A82-15788
  Higher plant acclimation to solar ultraviolet-B radiation
  N82-12737
UNDERWATER PHOTOGRAPHY
  Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator
  N82-13673
UNIVERSE
  On the place of organic life in the universe and the possibility of extraterrestrial life
  A82-13825

V

VASCULAR SYSTEM
  Oxygen deficiency in tissues and their blood supply
  A82-13700
VASOCONSTRICTION
  Hypoxic vasoconstriction and fluid filtration in pig lungs
  A82-13226
  Steady-state vascular responses to graded hypoxia in isolated lungs of five species
  A82-13231
VASODILATION
  Steady-state vascular responses to graded hypoxia in isolated lungs of five species
  A82-13231
VECTORCARDIOGRAPHY
  Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
  N82-13646
VERBAL COMMUNICATION
  Aircraft noise and speech communication interference in JASDF air traffic control room
  A82-15518
VERTICAL PERCEPTION
  Dynamic measurement of human vertical fusional response
  N82-13660
VESTIBULAR NYSTAGMUS
  The otolith reflex and space perception in cosmonauts
  A82-15717
VESTIBULAR TESTS
  The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation
  A82-13422
VESTIBULES
  Some contributions of touch, pressure and kinesthesis to human spatial orientation and oculomotor control
  A82-15280
  The frequency of vestibular impairments in chronic purulent medial otitis
  A82-15718
VIBRATION EFFECTS
  Influence of sine, and random, whole-body vibration on visual acuity
  [BMVG-FBWT-79-17] N82-13653
VIDEO DATA
  An approach to algorithms for processing data from the visual sensor of an integrated robot
  A82-15681
  Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator
  N82-13673
VIRTUAL PROPERTIES
  An investigation of the status of bone conduction audiometer calibration in the National Health Service
  [NPL-AC-101] N82-12769
VISIBILITY
  A single-channel model does not predict visibility of asynchronous gratings
  A82-15358
  Conspicuity of observation posts at the air weapon firing ranges on the Vliehors and the Noordvaarder
  [IZF-1979-33-E] N82-12774
VISUAL ACUITY
  Influence of sine, and random, whole-body vibration on visual acuity
  [BMVG-FBWT-79-17] N82-13653
VISUAL CONTROL
  An approach to algorithms for processing data from the visual sensor of an integrated robot
  A82-15681
VISUAL DISCRIMINATION
  Mechanisms of temporal discrimination in the visual analyzer
  A82-15714
  The efficiency of detecting tribar patterns modulated in random dot density
  [IZF-1980-25] N82-12779
VISUAL OBSERVATION
  Conspicuity of observation posts at the air weapon firing ranges on the Vliehors and the Noordvaarder
  [IZF-1979-33-E] N82-12774
VISUAL PERCEPTION
  The interaction between the edge effect and target conspicuity in visual search
  A82-12874
  The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation
  A82-13422
  Development of a secondary task method for measuring operator workload. V - Measurement of pilot workload during take off and landing by C-1 jet carrier
  A82-15516
VISUAL SIGNALS
  Visual/motion cue mismatch in a coordinated roll maneuver
  [NASA-CR-166259] N82-13664
VISUAL STIMULI
  Visual fatigue and cathode ray tube display terminals
  A82-12870
  The effect of visual-vestibular conflict on the latency of steady-state visually induced subjective rotation
  A82-13422
  Mechanisms of temporal discrimination in the visual analyzer
  A82-15714
VISUAL TASKS
  Visual fatigue and cathode ray tube display terminals
  A82-12870
  A single-channel model does not predict visibility of asynchronous gratings
  A82-15358
  The efficiency of detecting tribar patterns modulated in random dot density
  [IZF-1980-25] N82-12779
VOICE COMMUNICATION
  Voice control of the space shuttle video system
  N82-13719

W

WATER BALANCE
  Skylab water balance analysis
  [NASA-CR-167461] N82-12753
WATER QUALITY
  Method and apparatus for detecting coliform organisms
  [NASA-CASE-ARC-11322-1] N82-12739

**WEAPON SYSTEMS**
A self-contained, man-borne biomedical instrumentation system in the flight testing of naval weapons systems
[AIAA PAPER 81-2403] A82-13890

**WEIGHTING FUNCTIONS**
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725

**WEIGHTLESSNESS SIMULATION**
Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15719

**WORK-REST CYCLE**
Work and rest on nuclear submarines
A82-14274

**WORKLOADS (PSYCHOPHYSIOLOGY)**
Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators
A82-14837
Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems
A82-14839
Development of a secondary task method for measuring operator workload. V - Measurement of pilot workload during take off and landing by C-1 jet carrier
A82-15516
Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities
N82-13062
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Pupillometric measurement of operator workload
N82-13666
Subjective rating scales as a workload
N82-13669
Physiological assessment of operator workload during manual tracking. 1: Pupillary responses
N82-13670
Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports
N82-13687
Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

**WRIST**
Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

# X

**X RAY ANALYSIS**
Algorithms for imaging myocardial blood flow using X-ray computed tomography
N82-13661

**X RAY IRRADIATION**
Chemical protection of cells in culture and mice against X-irradiation
[NBL-1979-2] N82-12743

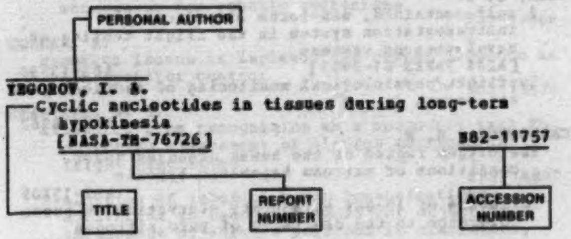
# Z

**ZIPPERS**
Zipper rear closure endurance testing
[AD-A104732] N82-12785

# PERSONAL AUTHOR INDEX

**AEROSPACE MEDICINE AND BIOLOGY**/*A Continuing Bibliography (Suppl. 230)* **MARCH 1982**

### Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

ACREE, C. W., JR.
Pilot estimates of glidepath and aim point during simulated landing approaches
[NASA-TM-81325] N82-12772

AGARWAL, G. C.
Computational problems in autoregressive moving average (ARMA) models
N82-13698

AGARWELL, G. C.
Load compensating reactions to perturbations at wrist joint in normal man
N82-13708

AKHMETOVA, G. K.
The self-stimulation response in cats in a nitrogen-oxygen medium under elevated pressure
A82-15351

ALEKSANDROV, I. A.
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment
A82-15706

ALLEN, R. W.
Using rewards and penalties to obtain desired subject performance
N82-13684

A theory of human error
N82-13716

Stability analysis of automobile driver steering control
N82-13717

Detecting human operator impairment with a psychomotor task
N82-13718

ANCHETTA, J.
Pupillometry, a bioengineering overview
N82-13711

ARAMAKI, S.
Development of a secondary task method for measuring operator workload. V - Measurement of pilot workload during take off and landing by C-1 jet carrier
A82-15516

ARBAK, C.
A comparison of head and manual control for a position-control pursuit tracking task
N82-13720

ARENA, L.
A monitor for noninvasive estimation of pulmonary blood flow
N82-13656

ARUGA, H.
A study of self-initiated elimination from the flight training. I - Reasons for self-initiated elimination
A82-15520

AULICK, L. H.
Arm and leg intravascular temperatures of men during submaximal exercise
A82-13227

## B

BACHERT, R. F.
SADT/SAINT simulation technique
A82-14677

BARANOVA, V. P.
Rhinopneumometric indicators during repeated antiorthostatic exposures
A82-15719

BARNARD, R. J.
Effect of exhaustive exercise on myocardial performance
A82-13228

BARON, S.
On the internal target model in a tracking task
N82-13700

BARRY, B. E.
Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days
A82-13232

BASSETT FREY, M. A.
Comparison of impedance ventricular function indices with systolic time intervals
A82-14806

BEARE, A. N.
Work and rest on nuclear submarines
A82-14274

BEATTY, J.
Pupillometric measurement of operator workload
N82-13666

Physiological assessment of operator workload during manual tracking. 1: Pupillary responses
N82-13670

BEJCZY, A. K.
Experimental results with a six-degree-of-freedom force-reflecting hand controller
N82-13707

Voice control of the space shuttle video system
N82-13719

BERG, R. F.
Computer aided manual tracking
N82-13705

BERSHTEIN, S. A.
Oxygen deficiency in tissues and their blood supply
A82-13700

BEST, J. F.
A model for the submarine depthkeeping team
N82-13689

BIERSNER, R. J.
Work and rest on nuclear submarines
A82-14274

BIGLEY, W. J.
Human supervision and microprocessor control of an optical tracking system
N82-13715

BIRD, K. L.
Subjective rating scales as a workload
N82-13669

BITTNER JR, A. C.
Effects of extended practice on dual-task tracking performance
A82-12875

**BLAAUW, G. J.**
Cybernetics and car driving: A mathematical (computer) model for the system to be controlled
[IZF-1980-4] N82-12775
Cybernetics and car driving: A driver model and its experimental validation
[IZF-1980-13] N82-12776
Cybernetics and car driving: Perspective perception and the output vector of the system to be controlled
[IZF-1980-19] N82-12778

**BLANK, N. A.**
A discrete model of the circadian kinetics of human bone marrow
A82-15704

**BLOIS, N. C.**
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

**BLUFORD, G. S., JR.**
Crew activities in space
N82-12129

**BOBROVNITSKII, N. P.**
The oxygen regime of the human organism under conditions of extreme hypobaric hypoxia
A82-15709

**BONDI, K. R.**
Work and rest on nuclear submarines
A82-14274

**BOOGAARD, J.**
Conspicuity of observation posts at the air weapon firing ranges on the Vliehors and the Noordvaarder
[IZF-1979-33-E] N82-12774

**BORGEST, A. N.**
EEG-correlates of training in the voluntary control of heart rate in man
A82-15703

**BOWE, T. R.**
A systems analysis of the maturation of sleep using a semi-Markov model
N82-13658

**BOZACK, T. J.**
System to measure head motion during parachute opening shock
[AIAA PAPER 81-2517] A82-13914

**BOZZI, P. J.**
A model for the submarine depthkeeping team
N82-13689

**BRANSOME, E. D., JR.**
Are there structural analogies between amino acids and nucleic acids
A82-13840

**BRAUSER, K.**
Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft
N82-13702

**BRENDEL, K.**
Oxygen toxicity and lung collagenous protein
[AD-A104702] N82-12756

**BRENNAN, N. J.**
Steady-state vascular responses to graded hypoxia in isolated lungs of five species
A82-13231

**BREUL, H. T.**
Some effects of Field Of View (FOV) and target size on lateral tracking at hover
N82-13672

**BRITTAIN, A.**
Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment
A82-14197

**BROOKS, R.**
Method and apparatus for detecting coliform organisms
[NASA-CASE-ARC-11322-1] N82-12739

**BROUWERS, A. A. F.**
Human control and regulation tasks
N82-12787

**BROWN, J. W.**
Voice control of the space shuttle video system
N82-13719

**BUCHELE, D. R.**
Veiling glare reduction methods compared for ophthalmic applications
A82-13289

**BUDKE, L.**
Chemical protection of cells in culture and mice against X-irradiation
[MBL-1979-2] N82-12743

**BUTLER, E. N.**
On the place of organic life in the universe and the possibility of extraterrestrial life
A82-13825

## C

**CAGLAYAN, A. K.**
On the internal target model in a tracking task
N82-13700

**CALL, D. W.**
A self-contained, man-borne biomedical instrumentation system in the flight testing of naval weapons systems
[AIAA PAPER 81-2403] A82-13890
In-flight physiological monitoring of tactical jet aircrewmen
A82-14962

**CHADDAROVA, R. N.**
The oxygen regime of the human organism under conditions of extreme hypobaric hypoxia
A82-15709
Influence of 15-day alimentary starvation on human tolerance to the breathing of pure nitrogen
A82-15710

**CHAFIN, R. L.**
A model for the control mode man-computer interface dialogue
N82-13722

**CHANG, S.**
Hydrazines and carbohydrazides produced from oxidized carbon in earth's primitive environment
A82-14197

**CHANTADISAI, R.**
Visual fatigue and cathode ray tube display terminals
A82-12870

**CHATTERJEE, I.**
An empirical relationship for electromagnetic energy absorption in man for near-field exposure conditions
A82-13175

**CHERNIGOVSKII, V. N.**
EEG-correlates of training in the voluntary control of heart rate in man
A82-15703

**CHERNYI, A. V.**
DNA and RNA synthesis in the isolated nuclei of rat skeletal muscle fibers during hypokinesia
A82-15353

**CHESTON, T. S.**
Human factors of outer space production
A82-15851

**CHILDS, J. D.**
Biological effects of low doses of ionizing radiation: Three review papers
[AECL-7059] N82-12758

**CHUBB, G. P.**
Validating manned system design and engineering change proposals
A82-14703

**CHUNRA, R.**
The frequency of vestibular impairments in chronic purulent medial otitis
A82-15718

**CHUONG, C. J.**
Three-dimensional stress distribution in arteries: Radial compression experiments of arterial wall; stress concentration in lung near a cylindrical cavity; finite element analysis of pleural surface pressure distribution in dog's lung during electrophrenic stimulation
N82-12750

**CHURCHILL, T.**
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724

**CLARKE, M. M.**
Man/machine interface development for the REMOTEX concept
N82-13678
Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679

CLEMENT, W. F.
A theory of human error N82-13716
COLQUHOUN, W. P.
Diurnal variation in vigilance efficiency A82-14275
COOK, C. W.
Multiple man-machine interfaces N82-13682
COOK, M.
Using rewards and penalties to obtain desired subject performance N82-13684
COPELAND, E. L.
Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680
CORKER, K.
Research issues in implementing remote presence in teleoperator control N82-13676
CRABTREE, M. S.
Automated item recognition as a secondary task for objective assessment of aircrew workload in flight simulators A82-14837
Evaluation of imbedded radio communications activities as secondary tasks for objective assessment of aircrew workload in simulators, trainers, and actual systems A82-14839
CRAIG, A.
Diurnal variation in vigilance efficiency A82-14275
CRAIG, J. J.
Articulated hands - Force control and kinematic issues A82-13110
CRAPO, J. D.
Pulmonary injury in rats following continuous exposure to 60% O2 for 7 days A82-13232

D

DAMOS, D. L.
Effects of extended practice on dual-task tracking performance A82-12875
A comparison of single- and dual-task measures to predict simulator performance of beginning student pilots A82-15813
DANILOVA, L. I.
Thermoregulatory responses to local convective and radiative cooling A82-12951
DAOUST, B. G.
Central venous bubbles and mixed venous nitrogen in goats following decompression A82-13234
DASHEVSKII, B. E.
Harmful effects of temperature under conditions of elevated pressure in a helium-oxygen environment A82-15706
DENISOVA, V. V.
Potential for the use of biorhythm structures for the prognosis of the course of a disease A82-15715
DESCHAMPS, J. L.
Methodical study of the contribution of the human system to the insecurity of technological systems N82-12788
DEVLAMING, P. M.
Human control and regulation tasks N82-12787
DOERR, B. M.
Comparison of impedance ventricular function indices with systolic time intervals A82-14806
DOERR, J. E.
System to measure head motion during parachute opening shock
[AIAA PAPER 81-2517] A82-13914
The physiological response of anthropometrically selected female military personnel to the test parachuting environment A82-14957
DONCHIN, E.
The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667
DOTSON, R. S.
Voice control of the space shuttle video system N82-13719
DUBORD, M.
Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671
DUCHNICKY, R. L.
Eye movement measurement of readability of CRT displays A82-12869
DUNCAN, H. W.
Effect of exhaustive exercise on myocardial performance A82-13228

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago
**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**
Minneapolis Public Library and Information Center
**NEW JERSEY**
Trenton Public Library
**NEW YORK**
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
**OHIO**
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 231)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in March 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
**National Aeronautics and Space Administration**
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 284 reports, articles and other documents announced during March 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697** # **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti)** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

# AEROSPACE MEDICINE AND BIOLOGY

## A Continuing Bibliography (Suppl. 231)

APRIL 1982

## IAA ENTRIES

**A82-16125** **Disappearance of stabilized chromatic gratings.** D. H. Kelly (SRI International, Menlo Park, CA). *Science*, vol. 214, Dec. 11, 1981, p. 1257, 1258. 9 refs. Grant No. NIH-EY-01128.

When the image of a stationary, sinusoidal luminance grating is stabilized on the retina of a human subject, he becomes unable to detect this stimulus at contrasts that are readily visible in normal, unstabilized vision. At much higher contrasts, such stabilized gratings can still be seen over most of the normal range of spatial frequencies, although the threshold contrast may be increased by as much as 20 or 30 times. When the analogous experiment is performed with an isoluminance chromatic grating, however, there is no contrast that can restore the visibility of the stabilized grating; the threshold elevations for stabilized chromatic gratings are too great to measure. Saturation red/green gratings fade out and disappear at 100% contrast (even where this is 45 times the unstabilized threshold), and they do not reappear as long as stabilization is maintained. Without some kind of temporal variation of the proximal stimulus, the opponent-color pathways apparently do not respond to spatial patterns. (Author)

**A82-16167** **Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests.** G. S. Uhl, T. N. Kay, and J. R. Hickman, Jr. (USAF, School of Aerospace Medicine, Brooks AFB, TX). *American Journal of Cardiology*, vol. 48, Dec. 1981, p. 1037-1043. 37 refs.

The usefulness of computer-enhanced thallium-201 myocardial perfusion scintigraphy in excluding the diagnosis of coronary artery disease in asymptomatic patients showing abnormal exercise electrocardiograms is evaluated. Multigated thallium scans were obtained immediately following and 3 or 4 hours after maximal exercise testing in 191 consecutive asymptomatic Air Force aircrew members who had shown abnormal exercise electrocardiograms and who were due to undergo coronary angiography. Computer enhancement of the raw images is found to lead to four false positive and two false negative scintigrams as revealed by angiographic results, while the group of 15 with subcritical coronary disease exhibited equivocal results. Results reveal that enhanced thallium scintigrams are an accurate diagnostics tool in detecting myocardial ischemia in asymptomatic patients and may be used in counseling asymptomatic patients on their likelihood of having coronary artery disease. A.L.W.

**A82-16274** † **Changes in blood indicators upon the inclusion of trace elements in the diet (Izmenenie pokazatelei krovi pri vkliuchenii v ratsion pitaniia mikroelementov).** V. Ia. Rusin, V. V. Nasolodin, and V. A. Suvorov. *Voenno-Meditsinskii Zhurnal*, Oct. 19[illegible], p. 44-46. 8 refs. In Russian.

Results are presented of two series of experiments aimed at assessing seasonal changes in human work capacity and blood factors and the effects of trace element dietary supplements on these factors. Measurements of work capacity, body vitamin C content, metallic enzyme activity, serum protein spectra and immune and hematopoetic conditions were made at various times of the year in healthy young subjects, and in the spring in a second group of subjects receiving supplemental iron, copper, and manganese in combination with ascorbic acid and the pharmacological agent dibazol, which acts to stimulate the body's defenses. Vitamin C supplies and levels of proteins, albumins, alpha-globulins, lysozyme and serum complement are found to be significantly higher in the autumn-winter period than in the spring and summer, while concentrations of beta- and gamma-globulins increase in the summer. Physical work capacity and metallic enzyme activities are observed to depend more on individual motor activity than on the time of year. The combination of the mineral complex with vitamin C and dibazol supplements is shown to lead to greater increases in hemoglobin concentration, erythrocyte numbers, peroxidase and ceruloplasmin activities, vitamin C supplies, physical work capacity, alpha- and beta-globulin contents and serum lysozyme titers than vitamin C supplements alone, and is thus recommended for improving physical capacities. A.L.W.

**A82-16275** † **Functional characteristics of the pilot hypothalamus-hypophysis-adrenal cortex system (Osobennosti funktsionirovaniia u letchikov sistemy gipotalamus-gipofiz-kora nadpochechnikov).** A. A. Novitskii, N. F. Markizova, and A. Iu. Kulidzhanov. *Voenno-Meditsinskii Zhurnal*, Oct. 1981, p. 50-53. In Russian.

Results are presented of an extended study of the functional characteristics of the hypothalamus-hypophysis-adrenal cortex (HHAC) system in flight personnel in the interflight period. System activities were determined by measurements of blood plasma levels of ACTH and 11-oxycorticosteroid and urinary levels of 17-oxycorticosteroid, 17-ketosteroid and dehydroepiandrosteroid in pilots having not flown for at least two weeks prior to the investigation. These indicators reveal that HHAC activity is elevated in pilots with respect to age-matched controls. Significant differences between HHAC system activity were not found between the various age groups, however. The intramuscular injection of 40 units of ACTH is found to lead to sizeable increases in the levels of 17-oxycorticosteroids and 17-ketosteroids excreted by the control subjects, however not in the pilots, indicating the depletion of physiological reserves in the pilot adrenal cortex. Greater levels of ACTH activity are found in pilots in the early stages of the profession, and in flight commanders. It is suggested that the HHAC systems of pilots function under a greater degree of stress than those of persons not involved in flight activities. A.L.W.

**A82-16288** † **Determination of the angular orientation of the body of a walking machine (Ob opredelenii uglovoi orientatsii korpusa shagaiushchego apparata).** V. B. Larin and K. I. Naumenko (Akademiia Nauk Ukrainskoi SSR, Institut Matematiki, Kiev, Ukrainian SSR). *Matematicheskaia Fizika*, no. 30, 1981, p. 18-24. 7 refs. In Russian.

A nonlinear algorithm for estimating the Rodrigues-Hamilton parameters for the body of a walking machine is developed. The algorithm relies on measurements of the angular velocity vector of the body of the machine and of the vertical vector in a moving coordinate system. The algorithm is based on the least squares method and is orientated towards implementation on a digital computer. B.J.

**A82-16701** **Astronaut activity in flight and enhancement of its efficiency (Deiatel'nost' kosmonavta v polete i povyshenie ee effektivnosti).** Edited by G. T. Beregovoi and L. S. Khachatur'iants. Moscow, Izdatel'stvo Mashinostroenie, 1981. 264 p. In Russian.

The general problems of manned space flight, the interaction of the astronaut and the spacecraft control systems, technical servicing and extravehicular activity, and the influence of flight factors on astronaut performance are among the topics discussed. Particular attention is given to current problems of the psychophysiology of astronaut work, the statistical characteristics of astronaut operator activity directed at spacecraft control, simulation of operator activity in the technical servicing of a space station, and the influence of emotional stress on astronaut activity. B.J.

**A82-16702** † **Basic principles and methods for assuring the efficiency of astronaut activity in flight (Osnovnye printsipy i metody obespecheniia effektivnosti deiatel’nosti kosmonavta v polete).** G. T. Beregovoi. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 6-13. In Russian.

A human-factors approach is taken to the evaluation of in-flight astronaut performance. Data characterizing the deterioration of astronaut performance at various stages of flight are presented, and various ways to compensate for this deterioration are discussed. The integration of the astronaut into various spacecraft control systems is considered. B.J.

**A82-16703** † **Current problems in the psychophysiology of space work /status and future prospects/ (Aktual’nye problemy psikhofiziologii kosmicheskogo truda /sostoianie i prognoz/).** L. S. Khachatur’iants. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 13-25. In Russian.

Various problems in the psychophysiology of astronaut work are considered, including problems involving the dynamics and level of analyzer system functions in the course of space flight, and the investigation of the psychophysiological phases of flight. These problems are discussed with reference to astronaut selection and training, ascent, descent, and landing phases, and orbital and interplanetary flight. Possible future trends in the psychophysiology of astronaut work are also discussed. B.J.

**A82-16704** † **Concerning a model of human activity (O modeli deiatel’nosti cheloveka).** G. M. Kolesnikov. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 25-46. In Russian.

A general functional-structural model of human activity is developed. From the functional point of view, the model incorporates the following subsystems: the subsystem of reflection of and action upon the external medium; the subsystem of the reflection of the internal medium on the basis of information about the external medium; and the subsystem of energy supply, and creation and conservation of structure. Human activity is always connected with the simultaneous functioning of all the subsystems under a definite domination of one of them at each stage of activity. B.J.

**A82-16705** † **Certain theoretical features of astronaut preparation (O nekotorye teoreticheskie osobennosti podgotovki kosmonavtov).** G. T. Beregovoi, P. R. Popovich, and G. M. Kolesnikov. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 46-58. In Russian.

Theoretical questions relating to astronaut preparation and training are examined, with attention given to adaptation in both the physiological and psychological senses. Techniques of intellectual preparation are discussed, with emphasis on problem learning. B.J.

**A82-16706** † **The use of a psychophysiological feedback system for purposes of activity optimization (Ispol’zovanie sistemy obratnoi psikhofiziologicheskoi sviazi v interesakh optimizatsii deiatel’nosti).** M. V. Frolov and L. S. Khachatur’iants. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 58-74. In Russian.

The development of a three-loop feedback system for the optimal control of operator activity is considered. Attention is given to methods for evaluating the functional state of an operator based on the analysis of working conditions and variations of physiological signals. As an example, an analysis is presented of states of attention and emotional stress. B.J.

**A82-16707** † **Psychophysiological correlates of the control activity of the astronaut (Psikhofiziologicheskie korreliaty upravliaiushchei deiatel’nosti kosmonavta).** L. S. Khachatur’iants. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 75-86. In Russian.

An abstract algorithmic scheme of astronaut activity is developed, and schemes of human-operator activity in various types of control systems are presented. It is shown that by using the abstract algorithmic scheme the designer can 'adapt' technology to man for the functional state which is expected in the actual conditions of activity. B.J.

**A82-16708** † **Certain aspects of the visual activity of astronauts (Nekotorye aspekty vizual’noi deiatel’nosti kosmonavta).** E. A. Ivanov and A. Ia. Frolov. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 86-100. In Russian.

The paper considers visual observations by astronauts of space objects (e.g., spacecraft that are the objects of rendezvous or docking) illuminated by the sun against the black background of the sky; the visual recognition of such objects is particularly difficult under such illumination conditions. The psychophysiological characteristics of visual pattern recognition and the functional state of the visual analyzer of the astronaut are theoretically evaluated, and experimental results obtained with the Proba visual simulator are examined. B.J.

**A82-16709** † **Methodological principles of the investigation of pilot error (O metodologicheskikh osnovakh izucheniia oshibochnykh deistvii cheloveka, upravliaiushchego letatel’nym apparatom).** N. D. Zavalova and V. A. Ponomarenko. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 100-116. In Russian.

It is argued that the methodology of investigating pilot error has been flawed by taking the concept of personal factors, rather than error theory, to be the underlying postulate. This paper proposes an engineering-psychological systems approach to the study of pilot error. B.J.

**A82-16710** † **Problems of the control of operator state (Problemy upravleniia sostoianiem operatora).** L. P. Grimak and L. S. Khachatur’iants. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 116-137. In Russian.

A survey is presented of problems involved in the control of human-operator state, with particular reference to astronaut performance in flight. A classification of the psychophysiological mechanisms responsible for the formation of operator states is presented. B.J.

**A82-16711** † **Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria (Optimizatsiia operatorskoi deiatel’nosti kosmonavta i sistem poluavtomaticheskogo upravleniia pilotiruemykh kosmicheskikh korablei po veroiatnostnym kriteriiam).** G. T. Beregovoi, V. M. Vasilets, and A. I. Iakovlev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel’stvo Mashinostroenie, 1981, p. 138-146. In Russian.

It is proposed that parametric methods be used to statistically optimize astronaut operator activity and systems of semiautomatic control of manned spacecraft. The basic idea of the approach consists in the development of algorithms that make it possible to select certain controls or parameters (considered as points of a certain space) that satisfy specified constraints and minimize or maximize a specified criterion for a certain number of astronauts participating in the control. The approximation of the control functions in a finite-dimensional space and the limitation of the number of system structure variants make it possible to represent the performance criterion as a function of a finite number of variables and thus to obtain the solution of the optimized problems. B.J.

**A82-16712** † **Investigation of the statistical characteristics of astronaut operator activity directed towards the control of a manned spacecraft (Issledovanie statisticheskikh kharakteristik**

**operatorskoi deiatel'nosti kosmonavta po upravleniiu PKA).** B. V. Volynov, V. M. Vasilets, E. D. Sukhanov, and A. I. Iakovlev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 146-155. In Russian.

The dynamic characteristics of astronaut operator activity were studied on simulators, the ultimate purpose of the tests being to provide information for the design of manual control systems. Correlation functions and spectral densities of operator errors were obtained, assuming that the random processes that were analyzed were stationary and ergodic. B.J.

**A82-16713** † **Investigation of astronaut activity under conditions of the hydrosimulation of weightlessness (Issledovanie deiatel'nosti kosmonavtov v usloviiakh modelirovannoi nevesomosti v gidrosrede).** G. I. Vorob'ev and L. D. Smirichevskii. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 156-161. In Russian.

An analysis is presented of the possibilities of the hydrosimulation of weightlessness, where the subject to be tested is submerged in water and a state of zero buoyancy is created. Experimental results are presented concerning the use of weightlessness hydrosimulation in the investigation of astronaut activity, and it is found that simulation results agree with data from actual space flight. It is concluded that the hydrosimulation technique is suitable for astronaut training, for purposes of spacecraft design, and for the development of astronaut-activity cyclograms. B.J.

**A82-16714** † **Experimental study of the characteristics of the detection of objects on a TV display by an operator under conditions of time deficit (Eksperimental'noe issledovanie kharakteristik obnaruzheniia ob'ektov operatorom na televizionnom indikatore v usloviiakh defitsita vremeni).** V. N. Zhovinskii. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 161-166. In Russian.

The present study examines the ability of an operator to detect small objects on a TV display in the case when the observation time period is sufficiently small (up to 3 sec), which corresponds to time-deficit conditions. It is found that the probability of detection increases with exposure time to a certain constant level whose value is determined by the background complexity. It is also found that the mean time of making erroneous decisions in the detection process exceeds the mean time of making correct decisions under time-deficit conditions. B.J.

**A82-16716** † **The design of extravehicular propulsion units (Ob ustroistve sredstv peremeshcheniia kosmonavta v otkrytom kosmose).** Iu. N. Glazkov. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 172-178. In Russian.

The paper describes a self-maneuvering unit that combines jet backpacks with two and three degree of freedom controllable gyroscopes. Block diagrams of of this type of self-maneuvering unit are presented, and attention is given to a number of design problems. B.J.

**A82-16717** † **Simulation of operator activity in a system for the technical servicing of a space station (Modelirovanie deiatel'nosti operatora v sisteme tekhnicheskogo obsluzhivaniia kosmicheskoi stantsii).** E. N. Stepanov. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 178-183. In Russian.

Two 30-day experiments are described in which operator activity involving the technical servicing and maintenance of a space station was simulated. Emphasis was placed on the influence of adaptation period, 30-day continuous activity, and 30-day habitation in an isolated and confined space on the operator work capacity and reliability. It was found that the productivity and reliability of repair and servicing work performed under space-station conditions were lower than under ordinary (i.e., non-space) conditions. B.J.

**A82-16718** † **Information model of the dynamics of autonomous extravehicular activity (Informatsionnaia model' dinamiki avtonomnogo dvizheniia kosmonavta v otkrytom kosmose).** E. V. Dement'ev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 183-187. In Russian.

It is shown that a method of parallel approach control and human visual capacity make it possible to develop a simple extravehicular propulsion unit with total or partial determination of the parameters of relative motion by the astronaut himself. A functional block diagram of the manual control system for this unit is presented. Since he actively participates in the control of the unit, the astronaut acquires information about the actual state of the control process through its information model. The degree of work intensity will depend, in part, on the quantity and character of control parameters indicated on the display devices. B.J.

**A82-16719** † **Simulation of manual autonomous control of an extravehicular propulsion unit /EPU/ (Modelirovanie ruchnogo avtonomnogo upravleniia ustanovkoi peremeshcheniia kosmonavta /UPK/).** L. P. Grimak and E. V. Dement'ev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 187-191. In Russian.

The paper considers the simulation of the mutual control of an EPU on a simulation test stand, with emphasis on the influence of the psychic and emotional state of the operator. Particular attention is given to the types of vegetative reactions in approach control at various control stages, and to variations of the terminal control parameters as a function of the simulated operator states. It is found that the experienced psychic state has a marked effect not only on the motor functions of the arms but also on the visual analyzer functions. B.J.

**A82-16720** † **The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man (K voprosu o vliiani nekotorykh uslovii obitaniia na fiziologicheskie funktsii, rabotosposobnosti i dinamiku sna cheloveka).** A. N. Litson, A. Ia. Frolov, V. N. Artishchuk, and A. V. Chapaev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 192-198. In Russian.

The paper describes an experiment which studied the level of physiological activity, work capacity, and dream dynamics of two operators engaged in the task of the technical servicing and repair of a simulated space station with an autonomous life support system in the course of 94 days. It is found that variations of the three factors studied have a marked adaptational character, and the conditions of habitation were found to have a marked effect on motor-analyzer indices. It is concluded that the present data can be used in constructing circadian cyclograms for the activity of operators working in unusual conditions. B.J.

**A82-16721** † **Investigation of the functions of an astronaut operator in information systems (Issledovanie funktsii kosmonavta-operatora v informatsionnykh sistemakh).** N. N. Fefelov and E. A. Cherenkova. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 198-205. In Russian.

An analysis is presented of astronaut speech performance in ground-space and space-ground communication channels. Some recommendations are made concerning the planning of operational communications and the preparation of onboard documentation. It is noted that the form in which the onboard documentation is presented determines the information processing rate and the quality of astronaut performance. It is also noted that the use of short sentences, and concrete and common words make the communications more effective. B.J.

**A82-16722** † **The effect of emotional stress on astronaut activity in a radio-telegraphy system (Vliianie emotsional'nogo napriazheniia na deiatel'nost' kosmonavta v sisteme radiotelegrafnoi sviazi).** A. K. Epishkin. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 205-208. In Russian.

Space flight simulation results are presented concerning the effects of three factors that lead to emotional stress-acceleration loading, weightlessness, and a life-threatening situation - on the performance of an astronaut operator in a radio-telegraphy system. It is found that these three factors produce emotional stress that has a definite effect on the psychophysiological characteristics of the operator. Psychic processes associated with the recoding of information and motor coordination are affected. The results confirm that emotional stress has an adverse effect on astronaut activity in flight. B.J.

**A82-16723 † Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness (Sravnitel'naia psikhofiziologicheskaia otsenka effektivnosti psikhicheskikh modelei gipo- i gipervesomosti tela).** L. P. Grimak. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 208-222. In Russian.

The effectiveness of hypnotically induced states of subjective increases or decreases in body weight is evaluated in light of the potential of such states in the investigation and prophylaxis of the effects of weightlessness encountered during extended space flights. Results are presented of an experiment in which subjects previously exposed to rotation on a centrifuge at 6 g and a short period of weightlessness were subjected to 10 days of strict bed rest alone, or under hypnotic suggestions of either weightlessness or heaviness. Subjective reactions, EEGs, EKGs, REGs, venous pressures, pulse rates, tracking performances, and cardiac morphologies monitored over the course of the experiment reveal clear differences in the reactions of the subjects according to the suggestion employed. The psychic model of hypoponderousness is observed to produce more pronounced changes than observed in an equivalent period of hypokinesia, including a reduction in heart size and tracking ability, while hyperponderousness in many ways acts to counteract the deleterious effects of extended bed rest, particularly with respect to operator activity. A.L.W.

**A82-16724 † Concerning the rationalization of the work and rest schedule of cosmonauts (Nekotorye voprosy ratsionalizatsii rezhimov truda i otdykha kosmonavtov).** A. Ia. Frolov, A. N. Litsov, V. N. Maliugin, V. A. Sutormin, and I. F. Saraev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 222-233. In Russian.

It is noted that time is often lost in the early part of a flight as cosmonauts adjust physically to conditions of weightlessness. In seeking to make this time up, use is made of the time allotted for rest and sleep, thereby bringing on fatigue. In scheduling the activities of cosmonauts, it is pointed out that consideration should be given to biorhythms and to the psychophysiological structure of the activity that the cosmonauts are called upon to perform. C.R.

**A82-16725 † The activity of psychic models of hypogravity during 30-day experiments (Aktivnost' psikhicheskikh modelei gipovesomosti tela v tridtsatisutochnykh eksperimentakm).** L. P. Grimak. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 233-239. In Russian.

Experiments are described that seek to determine the length of time that a hypnotically induced feeling of hypogravity can persist. During the experiment, the subjects perform functions similar to those that would be performed during a flight. C.R.

**A82-16726 † Psychophysiological safety control in long-duration space flights (K voprosu psikhofiziologicheskogo obespecheniia bezopasnosti kosmicheskogo poleta bol'shoi prodolzhitel'nosti).** V. S. Mishchenko. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 239-247. In Russian.

The evaluation of psychophysiological stress, an important indicator of cosmonaut work capacity, is discussed in light of the increasing range of tasks to be performed in space flights of increasing duration. An approach to the determination of the dynamics and levels of psychophysiological stresses is considered which is based on qualitative and quantitative expert determinations of such factors as the state of weightlessness adaptation, physiological condition, subjective feelings, complaints, fatigue, exhaustion, sleep quality, work duration, work difficulty and productivity, and the importance of the work-rest cycle to cosmonaut work capacities is emphasized. Results are then presented of an analysis of the psychophysiological stress encountered in a ground-based space flight simulation, and patterns in overall psychophysiological condition as a function of experiment duration are illustrated. A.L.W.

**A82-16727 † The effects of a light blue background on the operator visual analyzer (Vliianie golubogo fona na zritel'nyi analizator operatora).** E. N. Khludeev. In: Astronaut activity in flight and enhancement of its efficiency. Moscow, Izdatel'stvo Mashinostroenie, 1981, p. 248-251. In Russian.

The use of an illuminated visual field to improve operator performance in the detection and tracking of a manned spacecraft or orbital station against the background of the starry sky is studied. Experiments to assess operator performance, comfort and fatigue during an observation task were made under normal conditions, with stars and spacecraft against a black background, and with stars and spacecraft seen against a light blue background to improve visual resolution and prevent fatigue, with operators experiencing post-hypnotic suggestions of weightlessness, hypergravity, stresses and mental stimulation. The probability of detecting the moving spacecraft against the light blue background is found to be significantly greater than that of detecting it against the dark background, particularly in the presence of a time limit under all the experimental conditions. The subjects also reported less fatigue when searching for the object against the illuminated background. Results thus demonstrate the usefulness of visual field illumination in spacecraft detection against a background of stars. A.L.W.

**A82-16804 † Trial of an automated EKG analysis system in a cardiological clinic (Opyt ispytaniia sistemy avtomatizirovannogo analiza EKG v kardiologicheskoi klinike).** S. L. Korsakas, A. A. Kirmonas, L. I. Gargasas, A. L. Vainoras, L. I. Kalashaitite, A. I. Astrauskas, and P. V. Zabela (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Kardiologiia,* vol. 21, Sept. 1981, p. 109-112. 16 refs. In Russian.

Results are presented of a clinical trial of a computerized system for EKG evaluation in cardiac patients. The system, based on the ES-1022 computer, includes an automated electrocardiograph for the acquisition and recording of EKG signals and data input and output systems, as well as programs for input, identification, measurement, rhythm determination, contour analysis, file formation, search and overall regulation. Computer diagnoses of patients with various types of disrhythmias and cardiac pathologies including ischemia and ventricular hypertrophy made by the system as a whole are found to be in agreement with physician diagnoses in 82% of the cases. When the results of both diagnoses are compared with anatomical, clinical and X-ray data, however, the computer results are shown to be little inferior to those of the physicians in terms of either sensitivity or specificity. It is thus proposed that the computer system be incorporated into medical practice. A.L.W.

**A82-16805 † The ergometric determination of myocardial reserves (Opredelenie miokardial'nogo rezerva pri ergometrii).** V. P. Pomerantsev, Iu. S. Mdinaradze, E. A. Prokhorovich, and Iu. A. Vasiuk (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Kardiologiia,* vol. 21, Sept. 1981, p. 68-72. 11 refs. In Russian.

An analysis is presented of possible methods for the assessment of myocardial reserves, expressing myocardial capacity for increased cardiac ejection and an indicator of myocardial ischemia, based on the use of ergometric indicators. The methods considered involve various indirect determinations of myocardial reserves by measurements of systolic arterial pressure, heart rate and electrocardiograms during physical loading to derive the heart minute volume and stroke volume. Clinical studies are presented which have demonstrated the correlation of changes in these indicators during exercise with the degree of cardiac insufficiency in patients with post-infarction cardiosclerosis and hypertension. A procedure for the evaluation of myocardial reserves in symptomless patients is then suggested. A.L.W.

**A82-16806 †** **Experience with the development and application of telemetric computing systems in cardiology (Opyt razrabotki i primeneniia telemetricheskikh vychislitel'nykh sistem v kardiologii).** Zh. V. Chepaitis, E. I. Raugalas, A. I. Matuzonis, B. G. Shlapikene, and D. V. Lukshene (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Kardiologiia,* vol. 21, Sept. 1981, p. 112-115. 5 refs. In Russian.

A specialized telemetric computing system has been developed for applications in the mass screening of limited populations and the intensive monitoring of patients for signs of ischemic heart disease. The system is composed of an EKG monitoring subsystem, an automatic EKG analysis subsystem and a graphical data processing subsystem acting as an auxiliary to the first two subsystems, all of which exchange information through a common data base developed for the storage of the monitoring data. Experience has shown that, with the proper methodological approach, the use of automatic computing systems has decisive advantages over traditional diagnostic and monitoring methods in certain applications requiring the analysis of massive amounts of data. A.L.W.

**A82-16807 †** **Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object (Vozmozhnye model'nye predstavleniia o neirofiziologicheskikh mekhanizmakh analiza napravleniia i skorosti dvizheniia zritel'nogo ob'ekta).** Iu. P. Aleinikov, T. V. Aleinikova, and T. V. Mel'kovskaia (Rostovskii Gosudarstvennyi Universitet, Rostov-on-Don, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Aug. 1981, p. 1201-1207. 8 refs. In Russian.

Models of the detection of the direction and speed of the motion of a visual object at the level of the visual tectum of frogs are examined in order to clarify the possible neurophysiological mechanisms of motion parameter extraction from initially undifferentiated retinal signals. The models rely on the interactions of excitatory and inhibitory synapses on neurons forming part of the visual motion analyzer which are excited by ganglioretinal cells responsive to motion in different directions or at different speeds. In contrast to the two separate models developed, it is emphasized that in the actual tectum, motion direction and speed analyses are apparently performed by the same neurons. A.L.W.

**A82-16808 †** **The age characteristics of physical thermoregulation (Vozrastnye osobennosti fizicheskoi termoreguliatsii).** V. I. Basakin (Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, Sept.-Oct. 1981, p. 940-942. In Russian.

The thermoregulatory efficiencies of persons of different ages and sexes are evaluated. Skin temperatures over various parts of the body and the response of forearm temperature to local cooling were determined for male and female subjects aged from 1 to 90 years. An inverse relationship is found between subject skin temperature on the forehead, chest, shoulder, forearm and foot and subject age. Women in the 8-12, 18-25, and 36-60 age groups are observed to have higher skin temperatures than the men of the corresponding age groups, while in the remaining groups no sex difference is evident. Trunk-extremity temperature gradients are found to be less pronounced in children than in older age groups. The time required for the reestablishment of original skin temperature following local cooling is also observed to be shorter in the younger people than in the old, and in women from 12 to 60 than in men of the same age. The results may be explained in terms of the activation of the sympathetic nervous system by thyroid activity. A.L.W.

**A82-16809 †** **A procedure for the measurement of the critical flicker fusion frequency (Metodika izmereniia kriticheskoi chastoty sliianiia mel'kanii).** V. A. Gavrilov (Tomskii Gosudarstvennyi Universitet, Tomsk, USSR). *Fiziologiia Cheloveka,* vol. 7, Sept.-Oct. 1981, p. 947-949. 5 refs. In Russian.

A facility is presented which allows the measurement of critical flicker fusion frequency in humans with a greater accuracy than previously achieved. The system comprises a control unit, response circuit, flicker generation circuit including sawtooth voltage generator, voltage-frequency transformer and power amplifier, measurement circuit and optical system. As the system is not based on a mechanical light generation circuit, measurement error associated with system inertness and the shutter activation is eliminated. The use of an operational amplifier allows a high degree of linearity in frequency changes, with frequency error less than 0.06 Hz and measurement error less than 0.1%. In addition, the rate of change of flicker frequency can be adjusted from 0.5 to 1 Hz/sec in the range 10 to 80 Hz. A.L.W.

**A82-16810 †** **The reorganization of EEG structure during adaptation to the Antarctic (Perestroiki struktury EEG, v protsesse adaptatsii v Antarktide).** S. I. Soroko (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, Sept.-Oct. 1981, p. 909-916. 23 refs. In Russian.

Changes in the internal structure of brain biorhythmics as revealed by the statistical structure of EEG rhythm interactions during the process of adaptation to Antarctic conditions are investigated. Electroencephalograms were obtained with eyes open and eyes closed in 122 polar workers during the 17th Soviet Antacrtic expedition, and compared with evaluations of nervous system adaptability made on the basis of tests of the plasticity of individual cerebral neurodynamic processes. Results show a shift of the EEG frequency spectra towards lower frequencies as well as substantial rearrangements in the interconnections between the separate rhythms during adaptation. In persons showing a high level of adaptability, the ultimate EEG pattern developed is characterized by a significant strengthening of the statistical relations of the individual rhythms with the alpha and theta rhythms, and an increase in the interrelationship between the successive waves within those rhythms. In persons showing low adaptability, a new EEG pattern is not formed, and a marked instability of the statistical relations of the EEG rhythms is observed. The expression of neurotic states is found to be accompanied by a specific EEG pattern with a functional core in the theta-rhythm region. A.L.W.

**A82-16811 †** **Investigation of physiological compensation processes following the surgical destruction of the labyrinth (Issledovanie protsessov kompensatsii funktsii organizma posle khirurgicheskoi destruktsii labirinta).** V. T. Pal'chun, G. I. Gorgiladze, M. I. Kadymova, and Iu. O. Bulaev (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii,* Sept.-Oct. 1981, p. 7-12. 10 refs. In Russian.

The development and stability of processes in the central nervous system arising as compensation for the unilateral surgical destruction of the labyrinth are studied. Evaluations of equilibrium stability during walking and in the Romberg position, spontaneous and positional nystagmus and the response of the intact labyrinth to caloric and electrical stimulation were made up to 2 years following labyrinthectomy in patients suffering from Meniere's disease and limited labyrinthitis. A relatively rapid development of compensatory processes is observed in the sensory and vegetative functions, while spontaneous falling nystagmus and asymmetrical muscle tone persist for at least two years. The elimination of visual fixation, as well as mental work, changes in otolith orientation and alcohol intoxication, are found to facilitate vestibular asymmetry. Patient nystagmus and responses to cold stimulation during the first week after surgery indicate the rapid development of central nervous system compensation. Results support labyrinthectomy as the method of choice in the treatment of unilateral peripheral disorders of the vestibular apparatus combined with a high degree of amblyacousia. A.L.W.

**A82-16812 †** **Investigation of the otolith apparatus in clinical practice (Issledovanie otolitovogo apparata v klinicheskoi praktike).** A. O. Radzhabov and Iu. O. Bulaev (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii,* Sept.-Oct.

1981, p. 79-82. 56 refs. In Russian.

Clinical investigations of otolith functions are reviewed to illustrate the methods currently available for clinical application. Attention is given to uses of eyeball counterrotation as an indicator of otolith function, with emphasis of the Fischer method of visual afterimages, methods based on the influence of the otolith on postrotation reflexes, including the otolith reaction method with a rotating chair, and utricular and saccular gaits, the use of graded inclinations to determine otolith sensory thresholds, a standing task on a low bar to assess equilibrium functions, posturography, and four-bar swings. The Fischer method of indirect otolithometry and the use of small-amplitude stimulation on parallel four-bar swings for direct otolithometry are recommended as appropriate for use in clinical practice. A.L.W.

**A82-16813** † **The differential diagnosis of on asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions (Differentsial'naia diagnostika asimmetrichnogo techeniia vestibuliarnykh reaktsii pri perifericheskom i tsentral'nom polusharnom porazheniiakh).** N. S. Blagoveshchenskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Vestnik Otorinolaringologii,* Seot.-Oct. 1981, p. 3-7. 20 refs. In Russian.

Methods allowing the detection and differential diagnosis of vestibular asymmetries of peripheral and central hemispheric origin are presented. The methods involve the monitoring of nystagmic reaction to application of caloric stimuli to each ear, exposure to graded levels of relatively low-intensity rotation, or a combination of rotatory and caloric stimulation. It is noted that the most marked hemispheric asymmetries appear in deep subcortical foci in the temporo-parieto-frontal region during the decompensation phase, giving rise to a strengthening of nystagmus towards the focus. It is also pointed out that the predominant direction of nystagmus in hemispherical asymmetries may vary with the course of the disease and with the vestibular stimulus applied. A.L.W.

**A82-16814** † **The response of the hematic system of adrenalectomized mice to stressor activity (Reaktsiia sistemy krovi adrenalektomirovannykh myshei na stressornoe vozdeistvie).** ?. D. Gorizontov, M. I. Fedotova, and L. N. Egorova. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* Sept.-Oct. 1981, p. 36-39. 7 refs. In Russian.

Mechanisms leading to the changes observed in the hematic system in the two days following a single exposure to stress are investigated in a study of the response of adrenalectomized mice to a 6-hr immobilization. The cellular composition of the peripheral blood, bone marrow cell populations and amounts of karyocytes in the spleen and thymus were determined periodically following the immobilization on their backs of 170 adrenalectomized and 110 sham-operated mice. Whereas the peripheral levels of neutrophilic granulocytes initially rose then returned to their original values in both groups of animals, lymphocyte numbers are observed to increase following immobilization in the adrenalectomized mice and decrease in the controls. Bone marrow populations of lymphoid cells, neutrophilic granulocytes and mature neutrophilic cells are observed to undergo variations typical of the stress reaction in adrenalectomized and control animals alike, although the stem cells in the bone marrow of the experimental animals failed to increase and in fact decreased during the period of observation. Whereas the characteristic diminution in spleen cells is observed in both groups, the increase in thymus cells is much less marked in the adrenalectomized than in the control mice. Results thus demonstrate that changes in only peripheral blood lymphocyte numbers, thymus cell numbers and bone marrow stem cell numbers depend on the adrenal hormones. A.L.W.

In Russian.

Changes in the blood kallikrein-kinin, thrombin and plasmin systems, which collectively make up the Hageman factor system (HFS), accompanying intensive physical training are investigated. Precursors and inhibitors of kallikrein, thrombin and plasmin were determined in blood taken at rest and following maximal bicycle ergometer exercise from untrained healthy men, athletes during a period of intensive training and preparation for competition, and athletes following the end of the competitive season. Levels of the three precursors and of the plasmin and thrombin inhibitors are found to be higher in the training athletes than in either the controls or the recovering athletes, while the kallikrein inhibitor values are lower. Short-duration maximal exercise is observed to lead to increases in precursor levels and decreases in inhibitor levels in the controls and nontraining athletes, and decreases in all indicators with the exception of the plasmin inhibitor in active athletes. Results demonstrate the diagnostic and prognostic value of HFS determinations in the norm, in various cardiovascular pathologies, and during adaptation to prolonged physical loads. A.L.W.

A modification of the kinetic model of the interaction of contractile proteins of Deshcherevskii (1977) is presented which may be used in the construction of a set of models describing the entire process of muscular contraction. The present model takes into account the effects of the blockage of actin centers by troponin, and may be used to describe the growth and relaxation of muscular tension. In the limit of complete activation (troponin derepression) by Ca(2+) ions, it becomes identical to that of Deshcherevskii. A.L.W.

**A82-16819** † **Analysis of retinal work in the discrimination of a contour signal (Analiz raboty setchatki, vydeliaiushchei konturnyi signal).** D. G. Lebedev (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR). *Biofizika,* vol. 26, Sept.-Oct. 1981, p. 860-863. In Russian.

A comparative analysis is presented of the construction of the finite-difference Laplacian of the initial illumination distribution of light-sensitive retinal receptors by a mechanism based on lateral inhibition and according to the drift of the visual axis of the eye. Models of object shape discrimination by both mechanisms are developed taking into account the spread in the characteristics of the visual receptors and other retinal components observed in the eye itself. It is shown that whereas the lateral inhibition mechanism is much simpler, the visual axis drift mechanism, as used in models of the human visual system, provides a means of suppressing output signal noise caused by retinal element nonuniformities. **A82-16820** † **Model for the perception of moving and fixed objects (Model' vospriiatiia dvizhushchikhsia i nepodvizhnykh ob'ektov).** I. S. Losev and T. M. Shura-Bura (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSP). *Biofizika,* vol. 26, Sept.-Oct. 1981, p. 854-859. 9 refs. In Russian.

A two-dimensional model is developed and examined which reproduces phenomena connected with the visual perception of objects moving and fixed with respect to the retina. The model comprises a set of operations, including a logarithmic operation, smoothed differentiation with respect to time, spatial discrimination and reduction, to represent the sensation produced by an initial distribution of illumination on the retina as a function of time. Among the phenomena accounted for by the model are the generation of the empty field, the maintenance of normal vision during ocular drift, the comet phenomenon, changes in perceived brightness upon the stabilization of object sector boundaries, the perception of objects undergoing short-periodic oscillations and the perception of a continuously varying brightness distribution. The model is used to make theoretical predictions concerning some of these phenomena. A.L.W.

Changes in the functional condition of deep structures in the brain during the prolonged adaptation and deadaptation of rabbits to physical loading are investigated. Chronically implanted bipolar electrodes were used to monitor the local blood flow and excitability of the dorsal hippocampus, reticular formation of the midbrain, ventromedial hypothalamic nuclei and thalamic caudate and anteromedial nuclei in rabbits during a 120-day training period of submaximal and maximal treadwheel running and the 30-day period following the cessation of training. Initial periodic variations in the functional activity of all the structures studied with the exception of the hypothalamus are observed to stabilize at either enhanced or reduced levels by the 20th day of training, indicative of an adaptive response to submaximal physical loading. Exercise to the limit is observed to induce changes in the activities of the dorsal hippocampus, hypothalamus and particularly the reticular formation. The earliest stages of deadaptation are characterized by reductions in dorsal hippocampus and hypothalamic excitability, while reticular formation excitability is reduced to its original level only on the 30th day after the completion of training. A.L.W.

**A82-16824** † **Morphology of experimental pneumoconiosis arising from the effects of lunar soil (Morfologiia eksperimental'nogo pnevmokonioza, razvivaiushchegosia pod vozdeistviem lunnogo grunta).** Iu. D. Batsura, G. G. Kruglikov, and V. D. Arutiunov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 92, Sept. 1981, p. 376-379. 5 refs. In Russian.

The morphological effects of the inspiration of lunar soil particles are examined in an electron microscopic study. Pneumoconiosis was induced in albino rats by the intratracheal introduction of a suspension of finely dispersed lunar soil (brought back by Luna-16 from Mare Foecunditatis) in a starch solution; lung and trachoebronchial morphologies and phagocytitic activity were assessed after 3 days, 3 months and 6 months. Lung pathologies are observed to develop by an inflammatory response characterized by intense leucocyte and macrophage responses in the early stages, and, in later stages the thickening of the basal layer of the blood-air barrier, the activation of fibroblasts, cell associations and fibrosis, and the blockage of the terminal sections of the lymphatic system in response to the passage of 0.5-micron particles. The degree of fibrosis is found to be on the order of that associated with the weakly fibrogenic dusts. A.L.W.

**A82-16825** † **The effects of heat stress on the morphogenetic potencies of the nephron epithelium (Vliianie teplovogo stressa na morfogeneticheskie potentsii epiteliia nefrona).** O. Z. Mkrtchan (Tiumenskii Gosudarstvennyi Universitet; Tiumenskii Meditsinskii Institut, Tyumen, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 92, Sept. 1981, p. 352-356. 11 refs. In Russian.

The effects of heat traumas on the proliferation, growth and differentiation of the rat nephron epithelium are investigated in cultures grown within the organism. Sections of decapsulated kidneys taken from 6-month-old rats exposed to a heat stress of 45 C for 60 min and from control rats were implanted under the skin of the abdominal wall of recipient 2-month-old rats, and the implants were extirpated periodically for up to 30 days following implantation. The heat stress is observed to lead to a deterioration in kidney hemodynamics, associated with an increase in vascular permeability, ischemia of the cortical juxtamedullar zone and distrophic changes in the proximal and distal nephron sections. In both the healthy and experimental implanted kidneys, a vascular-tissue reaction is observed to take place, leading to the formation of connective capsules, intercelloidin layers and vessels in the implant. In comparison to the control implant, however, the experimental implant is found to exhibit intensified proximal and capsular destruction and a prolonged period of proliferative growth. The method employed is concluded to be useful for the development of objective criteria for the effects of extremal factors on tissue and organ properties.

**A82-16830** * **Effects of disuse by limb immobilization on different muscle fiber types.** F. W. Booth, M. J. Seider (Texas, University, Houston, TX), and G. R. Hugman (Baylor University, Houston, TX). In: Plasticity of muscle. Berlin, Walter de Gruyter und Co., 1980, p. 373-383. 33 refs. Grant No. NIH-AM-19393; Contract No. NAS9-15388.

The effects of disuse by limb immobilization on different muscle fiber types are reviewed. It is demonstrated that many changes occurring in atrophying skeletal muscles of young rats can be explained by the duration of the half-lives of muscle proteins. Differences are found to exist in responses of fast- and slow-twitch muscles due to disuse atrophy, and the appearance of plasticity in skeletal muscle begins to occur very soon after changes in the level of contractile activity. Rates of protein degradation increase in slow-twitch muscles at rapidly growing rates after approximately one day of limb immobilization; however, no change in the rates of protein degradation is noted in fast-twitch muscles of young rats. D.L.G.

**A82-16833** * **Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid.** M. D. Ross. In: Ménière's disease: Pathogenesis, diagnosis and treatment; Proceedings of the International Symposium, Düsseldorf, West Germany, May 1980. Stuttgart, Georg Thieme Verlag; New York, Thieme-Stratton, Inc., 1981, p. 76-86. 38 refs. Grants No. NsG-9047; No. NIH-NS-13428.

A description is presented of recent ultrastructural findings in Reissner's membrane and the spiral ligament in rats treated daily with ethacrynic acid during the 2nd and 3rd weeks of postnatal life, a period of final maturation of the inner ear and its fluids. A distension of Reissner's membrane in every cochlear turn, indicative of mild endolymphatic hydrops, was found to occur in animals that received a higher dose of ethacrynic acid. Ultrastructurally, the cytoplasm of the epithelial cells of Reissner's membrane showed increased electron density after treatment with ethacrynic acid. This increase was most pronounced in animals treated with a greater quantity of the drug. The epithelial cells had similar ultracellular features throughout except that the cells were much thinner in the region of maximal distension. G.R.

**A82-16892** **Principles of feature integration in visual perception.** W. Prinzmetal (British Columbia, University, Vancouver, Canada). *Perception and Psychophysics,* vol. 30, no. 4, Oct. 1981, p. 330-340. 22 refs. Natural Sciences and Engineering Research Council of Canada Grant No. A-7039.

The results of four experiments using conjunction errors to determine principles which could predict which features of a stimulus display are integrated by the visual system are presented. Specific attention was given to the location principle, to see if features located close together in space would be joined, and the perceptual group principle, to observe if the visual system would join features from stimulus items forming the same perceptual group or pattern. Subjects were presented tachistoscopic displays of two rows of circles and were asked to determine if there had been a 'plus' sign present in one of the circles. The rows were varied in orientation in space and to one another, and also in color. The perceptual group principle was found to be a good predictor of feature recognition, whereas the location principle was not. Further studies to determine if perceptual organization affects feature abstractions as well as feature integration are indicated. M.S.K.

**A82-16893** **Is recognition accuracy really impaired when the target is repeated in the display.** C. W. Eriksen, N. Morris, Y.-Y. Yeh, W. O'Hara, and R. T. Durst (Illinois, University, Urbana, IL). *Perception and Psychophysics,* vol. 30, no. 4, Oct. 1981, p. 375-385. 25 refs. Grant No. PHS-MH-01206.

Bjork and Murray (1977) have presented a feature-specific interactive channels model that predicts perceptual interference between letters presented simultaneously in visual displays. Maximum interference is predicted when a target letter is presented with an identical letter. In their experiment, Bjork and Murray found support for their model, but their results could have occurred artifactually from response biases of their subjects. Santee and Egeth (1980) used a different paradigm that eliminated the possibility of this particular response bias and reported that their data supported the feature-specific model. However, the present paper shows that analysis of their data by Santee and Egeth was incomplete and the comparisons inappropriate. In two experiments that used the Santee and Egeth paradigm, support was not found for the feature-specific model when more detailed analyses of the data were undertaken. In a third experiment, one that used the Bjork and Murray paradigm, but with control of response bias, no significant or suggestive evidence was found that feature similarity between noise and target letters affected recognition of the latter. **A82-16926** **Basic environmental problems of man in space; Proceedings of the Sixth International Symposium, Bonn, West Germany, November 3-6, 1980.** Symposium sponsored by the International Academy of Astronautics. Edited by K. E. Klein and J. R. Hordinsky (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Cologne, West Germany). *Acta Astronautica,* vol. 8, Sept.-Oct. 1981. 298 p.

Summaries were given of biomedical research on manned and biosatellite spacecraft from the U.S. and U.S.S.R. Papers were presented on investigations of the effects of spaceflight on human cardiovascular and pulmonary systems. Attention was also paid to studies involving endocrinology, hematology, and immunology, as well as neurology and psychology in spaceflight, with emphasis on the causes and prevention of space sickness. Changes worked on the human musculoskeletal system by hypogravity, hypokinesia, and long duration spaceflight are examined, and preventive health maintenance and medical care in spaceflight are considered. The calcium loss mechanism was explored, and biotechnology for emergency and rescue conditions and trends in life support equipment are reviewed. Finally, future missions for U.S. and U.S.S.R. space activities are outlined. M.S.K.

**A82-16927** * **U.S. manned space flight: The first twenty years - A biomedical status report.** L. F. Dietlein (NASA, Johnson Space Center, Houston, TX) and R. S. Johnston (Texas, University, Houston, TX). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 893-906. 5 refs.

In the last 20 years, the biomedical problems facing man in space have been brought into sharper focus. Space motion sickness is presently the most serious problem. Its etiology remains obscure, but the 'sensory conflict' theory appears most plausible. No valid predictive tests of susceptibility exist and presently medication for prevention or mitigation of symptoms must be relied on. Adaptation/biofeedback techniques may prove useful. Cardiovascular 'deconditioning' may be effectively attenuated by use of anti-g suits or plasma expanding techniques. Recent bedrest simulation studies would seem to indicate that concerns about chronically elevated central venous pressure during space flight are unfounded. The loss of red cell mass in space flight appears to be self-limited, independent of mission duration, and not of clinical concern, based on recent Soviet experiences. And finally, clodronate, a new diphosphonate effective in preventing hypercalciuria and negative calcium balance in normal human bedrested subjects, may prove effective in preventing or lessening skeletal mineral loss in space. (Author)

**A82-16928** **Summary of medical investigations in the U.S.S.R. manned space missions.** O. G. Gazenko, A. M. Genin, and A. D. Egorov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 907-917. 6 refs.

Russian medical investigations of the effects of spaceflight on human physiology are reported. Short duration flights at the beginning of the Russian space program revealed vestibulo-autonomic disorders due to weightlessness and deconditioning to work loads and earth gravity. Vestibulo-autonomic disorders were found to recur among 30% of the cosmonauts once longer spaceflights were undertaken. Pulse blood filling of the head persisted for 3-4 months of flight, yet decreased in the legs, and oxygen debt grew as a function of flight length. Hypertrophy of the leg muscles and the long wide back and neck muscles occurred from the absence of gravity, slowing only when countered with vigorous exercise programs. All changes, even after the 175-day flight, were seen to be reversible after varying periods of time back on earth, although it is noted that even longer flights may result in social-psychological problems which are not yet predictable. M.S.K.

**A82-16929** **Summary of experiments onboard Soviet biosatellites.** S. O. Nikolaev and E. A. Il'in (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 919-926. 54 refs.

Physiological, morphological and biochemical studies of mammals flown on board biosatellites of the Cosmos series revealed changes in their cardiovascular, musculoskeletal, endocrine and vestibular systems. Space flight resulted in moderate stress reactions, intralabyrinthine conflict information during movements, and changes in fluid-electrolyte metabolism. Exposure to artificial gravity (1 g) decreased the level of myocardial, musculoskeletal and excretory changes, but disturbed the function of equilibrium. Studies with combined weightlessness and ionizing radiation demonstrated that weightlessness did not produce a significant modifying effect on radiation damage and postradiation recovery. Consistent changes in certain systems of animals and humans in weightlessness confirm the practical importance of biosatellite studies, which also contribute to the solution of general biology problems associated with gravity effects on life processes. (Author)

**A82-16930** * **U.S. biological experiments in space.** H. P. Klein (NASA, Ames Research Center, Moffett Field, CA). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 927-938. 68 refs.

The history of biologic experimentation in space is traced. Early balloon and rocket borne animals showed no abnormalities on the macroscale, and biosatellite launches with bacteria and amoebae revealed no microscopic dysfunctions. Adult Drosophila flies on board Cosmos spacecraft died with a shortened lifespan, while their offspring lived full lifespans. Green pepper plants grown in weightlessness showed a different orientation, but no physiological disturbances. Normal bone growth in rats has been found to almost cease after 11 days in space, and the mean life span of red blood cells decreases by four days. A series of experiments designed by U.S. scientists will be performed on primates provided and flown by the U.S.S.R. Finally, experiments on board Spacelab will involve determination of the persistence of circadian rhythms in bacteria and humans. M.S.K.

**A82-16931** **Current views and future programs in cardiovascular physiology in space.** K. A. Kirsch and H. von Ameln (Berlin, Freie Universität, Berlin, West Germany). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 939-950. 20 refs. Research supported by the Bundesministerium für Forschung und Technologie.

The volume shift of 2000 cu cm from the lower to the upper part of the human body during weightlessness gave rise to theoretical and practical questions which are addressed in this communication. The analysis revealed that the mobilized fluid reduced the interstitial fluid of the lower extremities by 40%. Applying the current ideas in the field of interstitial tissue physiology to these problems, one must conclude that the fluid displacement can only be brought about by a change of the interstitial tissue compliance. Based on the observations made by the astronauts and on the working hypothesis of the authors, a method was proposed to follow the fluid migration and to measure the tissue compliance in man. Results are reported from experiments under terrestrial conditions. They show that the tissue compliance indeed can be modulated. Applying the method in space can eventually help to clarify several concepts in terrestrial physiology. (Author)

**A82-16932** **Cardiovascular reflexes during rest and exercise modified by gravitational stresses.** F. Bonde-Petersen (Copenhagen, Universitet, Copenhagen, Denmark). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 951-958. 10 refs. Research supported by the Danish Space Council and Statens Laegevidenskabelige Forskningsrad.

The effects of negative and positive pressure during rest and exercise were studied to determine whether variations in central venous pressure via the low pressure baroreceptors modifies the arterial baroreceptor function. Seven males in supine position were measured by an Xe-133 washout technique, revealing that increased sympathetic nervous activity of central origin overrides the local veno-arterial reflex. The subjects also underwent hand-grip exercise in a pressure tank or an anti-g suit and were monitored for cardiac output, forearm blood flow, blood pressure, heart rate, total peripheral resistance, and stroke volume. Two regulatory mechanisms were found for skin blood flow, one a veno-arteriolar local reflex mechanism and one in the central nervous system, implying that hydrostatic skin pressure and global vasoconstrictor tone attenuates hydrostatic pressure effects on capillary pressure. Prolonged exercise time was achieved in 35 C water as a result of enhanced venous return because venous pooling due to gravity was avoided. M.S.K.

**A82-16933** **Effect of physical fitness and training on physiological responses to hypogravity.** H. Saiki, M. Nakaya, M. Sudoh, M. Abe, Y. Taketomi, K. Oh'ishi (Jikei University, Tokyo, Japan), Y. Saiki, and A. Saiki (Saiki Institute of Science for Nutrition, Tokyo, Japan). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 959-969. 12 refs.

Athletes, quasi-athletes, and nonathletes were studied after periodic exercise and immersion in a water tank to determine the effects of hypogravity on physical fitness. Changes in VO2 flux, anaerobic power and flicker fusion value, blood pressure and pulse rate, urinary excretion of K(+), Na(+), 17-OHCS, and catecholamines were measured every hour for six hours. Orthostatic tolerance (OST) increased after exercise and decreased after immersion. An observed increase in pressure regulation functions was taken as an adaptation to the decrease in tolerance of other functions, creating a favorable condition for hypodynamic life. Water immersion helped the recovery of tolerance losses and did not create stress. However, a relatively small noradrenaline decrease, and a smaller adrenaline increase, were taken as evidence of detrimental effects of hypodynamics for athletes. M.S.K.

**A82-16934** **Simulation of human reactions under extreme conditions.** H. Felkel, M. Jirina, M. Adamec, R. Feuereisl, J. Dvorak, and L. Cettl (Vyzkumny Ustav Tuberkulozy a Respiracnich Nemoci, Prague, Czechoslovakia). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 971-976.

A heuristic model of the lung flow-volume loop for lung mass determination is presented. The redistribution and transfer of fluids in weightlessness affects lung blood flow, and computer analysis and simulation was used to mathematically describe breathing dynamics. Second order parameters were identified and model calculations were compared to results derived from esophageal sounds made by 20 random individuals. A correlation of 0.803 was found, and in-flight measurement of the relative blood volume in the lungs in weightlessness is projected to be possible using a pneumotachograph. M.S.K.

**A82-16935** * **An overview of the endocrine and metabolic changes in manned space flight.** C. S. Leach (NASA, Johnson Space Center, Biomedical Laboratories, Houston, TX). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 977-986. 31 refs.

Analyses of endocrinological and metabolic data from humans during spaceflight, particularly the Skylab crews, are summarized to define the levels of knowledge of these processes and the techniques for studying them. The glomerular filtration rate was tested by urine and blood samples, yielding indications of a creatinine clearance increase. The mechanisms for an increase of free water clearance, implying an increase of antidiuretic hormone, are uncertain, and tests are also under way to evaluate the role of prostaglandins in-flight, to account for decreases in catecholamine excretion. Bone mineral losses of 7.9% were observed at the end of 84 days, and processes are suggested for the calcium metabolism. Finally, the observation of almost universal weight loss among space crewmembers is examined, and a loss of muscle tone due to decreased metabolic efficiency is cited as a feature of long duration spaceflight. M.S.K.

**A82-16936** **Ion regulatory function of the human kidney in prolonged space flights.** A. I. Grigor'ev (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 987-993. 14 refs.

Ten cosmonauts, who performed 30-175-day space flights aboard Salyut-4 and Salyut-6, and over 60 test subjects who were exposed to bed rest of up to 182 days and immersion of up to 56 days, were examined. The renal excretion of potassium and calcium increased, reaching a maximum by the 4-6th weeks in prolonged space flights and simulation studies. During the load tests with potassium and calcium salt, excretion postflight was much higher than preflight. During potassium chloride load tests a positive correlation between the blood content of aldosterone and potassium excretion existed, whereas during calcium lactate load tests an increased calcium excretion was accompanied by a decrease in blood parathyroid hormone concentration. The most probable cause of the negative ion balance in weightlessness is the reduced capacity of tissues to retain electrolytes due to the decreased ion pool capacity. Different exercises have been shown to exert a beneficial effect on electrolyte metabolism. (Author)

**A82-16937** **Hematological and immunological changes during space flight.** A. Cogoli (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 995-1002. 28 refs. Swiss National Science Foundation Grant No. 3,449,0,79.

This paper gives a summary of the principal hematological and immunological changes observed in crews after space flight. Reduction of red blood cell mass (2-21%) and of hemoglobin mass (12-33%) is generally observed. The changes are accompanied with a loss of plasma volume (4-16%). Erythrocyte and hemoglobin concentrations in the blood remain constant, suggesting that the changes are driven by a feed-back mechanism. Immunological changes consist mainly of reduced T-lymphocyte reactivity. The results of the 96-day and 140-day Salyut-6 missions suggest that the adaptation of the immune system to spaceflight occurs in two stages: the first takes place during the first 2-3 months in space, the second follows and consists of further weakening of the immune response. Experiments with human lymphocytes in vitro indicate that high-g enhance, whereas low-g depress lymphocyte activity. Finally, investigations to be performed on Spacelab are described. (Author)

**A82-16938** **Nausogenic properties of various dynamic and static force environments.** R. J. von Baumgarten, H. Vogel, and J. R. Kass (Mainz, Universität, Mainz, West Germany). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1005-1013. 9 refs. Bundesministerium für Forschung und Technologie Contract No. 01-QV-017-ZA/WF/WRK-2755.

Tests to define the exact nature of space sickness are described. Static space sickness is thought to occur in individuals who lack perfect symmetry in their otoliths. Orientation imbalance is then precipitated by a change to a hypogravity field. Dynamic space sickness can happen in persons who are not affected by static space sickness, and involves displacement of the otoliths by inertial forces during head movements and locomotion. Experiments in cars, airplanes, and on a laboratory sled to explore the susceptibility to motion sickness are outlined. It was observed that humans have sensors for acceleration, but not for velocity, and velocity- and hill-top illusions are mentioned, noting that changes in direction or acceleration led to subjects perceiving up and down motions while in fact they were riding in a horizontal path. Symptoms vanished with visual contact with the environment. M.S.K.

**A82-16939 *** **Coping with space motion sickness in Spacelab missions.** A. Graybiel (U.S. Naval Aerospace Medical Center, Aerospace Medical Research Laboratory, Pensacola, FL). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1015-1018. 7 refs. NASA Order T-3384-G.

Lessons learned from Skylab are applied to methods of dealing with space sickness among crewmembers in their first orbital flight. Early experiences on Skylab 3 led to regularly scheduled scopalamine/dexedrine tablets ingestion. Subsequent experiences on the next Skylab mission established a 75% incidence of the sickness among first-time-in-orbit crewmembers, notably in periods of inactivity rather than work periods. Intramuscular injections are recommended to treat acute space sickness. Preflight transdermal scopalamine plus three or four doses of 5 mg amphetamine are chosen preventive measures, giving 12 hours of efficacy. M.S.K.

**A82-16940** **Status of vestibular function after prolonged bedrest.** M. Burgeat, M. Toupet, D. Loth, I. Ingster (Hôpital Lariboisière, Paris, France), A. Guell, and J. Coll (Hôpital de Rangueil, Toulouse, France). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1019-1927. 7 refs. Research supported by the Centre National d'Etudes Spatiales.

Six young, healthy, male volunteers were submitted to one week of head down (-4 deg) bedrest. This position simulates the cerebral hemodynamic conditions in weightlessness. Measurements of vestibular equilibrium and of oculomotor system function were made before and after the prolonged bedrest. Analysis of the results indicates that vestibular responses, as measured by the maximal speed of the slow phase of the provoked nystagmus (caloric and sinusoidal rotary stimulations), are decreased after prolonged bedrest. This statistically significant diminution requires confirmation with a greater number of cases. The reflex conflicting or interacting with the cervico-ocular and optokinetic reflexes on the one hand and the foveal vision on the other, is one of several possible explanations for the observed changes. (Author)

**A82-16941** **Vestibular tests in the selection of cosmonauts.** J. Kubiczkowa (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1029-1034. 14 refs.

Results of the testing of cosmonaut candidates for susceptibility to space sickness caused by Coriolis accelerations are reported. The tests comprised biothermal caloric, rotary acceleration-deceleration, optokinetic, swing torsion, and statokinesemetric trials. Nystagmus parameters were obtained from the caloric and rotary tests, and were found similar for subjects with high tolerances for Coriolis accelerations. It is noted that vestibular habituation did not occur evenly for all subjects, and further tests to determine the exact physical mechanisms which lead to reduced response to motion sickness are recommended. M.S.K.

**A82-16942 *** **Effects of the diet on brain function.** J. D. Fernstrom (MIT, Cambridge, MA). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1035-1042. 19 refs. NASA-NIH-PHS-supported research.

The rates of synthesis by brain neurons of the neurotransmitters serotonin, acetylcholine, and the catecholamines depend on the brain levels of the respective precursor molecules. Brain levels of each precursor are influenced by their blood concentration, and for the amino acid precursors, by the blood levels of other amino acids as well. Since diet readily alters blood concentrations of each of these precursors, it thereby also influences the brain formation of their neutrotransmitter products. (Author)

**A82-16943** **Informational need of emotional stress.** P. V. Simonov and M. V. Frolov (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1043-1049. 9 refs.

Subjects underwent a series of tests comprising a visual recognition of numbers in the presence of visual noise and time constraints to measure the influence of emotional stress on reactions. Small levels of continued emotional stress were found to increase performance, decrease errors, and also lead the operators to regard unimportant cues as important. A hypothalamus-amygdala model is presented, where motivational conflict induces chronic anxiety and fixed-direction actions. Further personality typing is attempted with models of hypothalamus-frontal cortex dominated individuals, who are predominantly introverts or choleric, and amygdala-hippocampus dominated persons, who are weak or melancholic. Additionally, there are frontal-cortex-hippocampus dominated individuals who display extroverted behavior. M.S.K.

**A82-16944** **How important are changes in body weight for mass perception.** H. E. Ross (Stirling, University, Stirling, Scotland; Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1051-1058. 26 refs.

The ability of humans to judge weight and mass in variable gravity conditions is considered. Subjects have compared weights and masses in and out of water, in parabolic flight and on the ground, and in centrifuges. Differences in the arm weight due to reduced gravity was found to lead to a choice of weights and masses greater than those in normal gravity. Sequencing the magnitude of the objects also displayed significant effects, as did the presence of anxiety, unusual vestibular stimulation, cognitive expectations, and range effects. Adaptation to null gravity results in an improvement in judgment of the mass of familiar objects, called 'mass constancy', and maladjustment returns with a return to a different gravity environment. M.S.K.

**A82-16945** **Pathophysiology of motor functions in prolonged manned space flights.** I. B. Kozlovskaia, Iu. V. Kreidich, V. S. Oganov, and O. P. Koserenko (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1059-1072. 14 refs.

The influence of weightlessness on different parts of the motor system has been studied in crew members of 140- and 175-day space flights. It has been shown that weightlessness affects all parts of the motor system including: (1) the leg and trunk muscles, in which severe atonia, a decrease of strength and an increase of electromyographic cost of contraction have been observed; (2) the proprioceptive elements and the spinal reflex mechanisms in which decreased thresholds accompanied by decreases of maximal amplitude of reflexes and disturbances in cross reflex mechanisms have been found; and (3) the central mechanisms that control characteristics of postural and locomotor activities. The intensities and durations of disturbances of different parts of the motor system did not correlate to each other, but did correlate with prophylactic activity during space flight. The data suggest a different nature of disturbances caused by weightlessness in different parts of the motor system. (Author)

**A82-16946** **The effects of hypokinesia in primates and bone strength.** L. E. Kazarian and H. E. von Gierke (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1075-1082.

A 14 days ground based primate hypokinesia investigation was conducted to determine what changes, if any, in bone strength may be demonstrated following 2 weeks cast immobilization and at 14 days after removal from casts. Controlled compressive loads were applied to vertebral bodies excised from control, 2 weeks immobilization and 2 weeks post immobilization Rhesus monkeys. The material properties reported herein are ultimate load, displacement to ultimate load, stiffness, and energy to ultimate loads. These results show a decrease in bone strength following immobilization and a still further decrease in bone strength after 14 days. (Author)

**A82-16947** **Bone effects of space flight - Analysis by quantum concept of bone remodelling.** A. M. Parfitt (Henry Ford Hospital, Detroit, MI). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1083-1090. 25 refs.

The long term effects and extent of bone calcium loss due to long duration spaceflight are examined. The calcium loss is mainly through urinary excretion, according to Skylab IV data, with a maximum loss rate of 300 mg/day. The total average depletion was 18 g from both trabecular and cortical bones, and the extent of recovery after return to earth is as yet undetermined. Bone remodelling in natural processes involves osteoclast excavation of bone cavities and osteoblast renewal, with complete erosion and repair cycles lasting 3-6 months. An example of deer antler regrowth is cited, wherein increased cortical bone porosity occurs during regrowth, then returns to normal after the antlers are completed. Finally, tetracycline labeling of bone formation sites is reviewed, and it is cautioned that results of studies of bone regrowth for long term bedrest subjects may not be applicable for long term spaceflight. M.S.K.

**A82-16948** **Radiation - Risk and protection in manned space flight.** V. M. Petrov, E. E. Kovalev, and V. A. Sakovich (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1091-1097. 15 refs.

Radiation hazard for cosmonauts and necessary protective measures are considered. The radiation is either permanent, such as in the inner terrestrial radiation belts, or temporary, such as in the fluctuating outer belts, from solar flares, or from cosmic ray showers. An effective level of 33 rem is offered as a justified risk dose, based on U.S.S.R. and international safety standards. Estimated radiation levels are provided for a one year spaceflight, noting that exposures to 50 rem doses should be more than one month apart. Increased orbital inclination, lengthy flight duration, and higher orbits all lead to increased radiation risks, and shielding with aluminum to 5 g/sq cm is recommended, along with a radiation shelter for long term workers on space stations. The calculated permissible dose rates are designed to bring the probabilities of death due to tumors caused by radiation in line with hazards faced in other occupations, such as test pilots. M.S.K.

**A82-16949** **The role of HZE particles in space flight - Results from spaceflight and ground-based experiments.** H. Bücker and R. Facius (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Frankfurt am Main, West Germany). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1099-1107. 19 refs.

Selected results from experiments investigating the potentially specific radiobiological importance of the cosmic HZE (equals high Z, energetic) particles are discussed. Results from the Biostack space flight experiments, which were designed to meet the experimental requirements imposed by the microdosimetric nature of this radiation field, clearly indicate the existence of radiation mechanisms which become effective only at higher values of LET (linear energy transfer). Accelerator irradiation studies are reviewed which conform with this conjecture. The recently discovered production of 'microlesions' in mammalian tissues by single HZE particles is possibly the most direct evidence. Open questions concerning the establishment of radiation standards for manned spaceflight, such as late effects, interaction with flight dynamic parameters, and weightlessness, are indicated. (Author)

**A82-16950** **Anesthesia, surgical aid and resuscitation in manned space missions.** L. L. Stazhadze, I. B. Goncharov, I. P. Neumyvakin, V. V. Bogomolov, and I. V. Vladimirov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1109-1113.

Medical procedures suitable for employment in space are reviewed. Reduced blood volume, the redistribution of bodily fluids, dehydration, functional hypodynamics of the myocardium, and shifts in the central or humoral parts of hemodynamic regulation have been noted in long duration space flights. The use of mutually potentiating subnarcotic anesthesia is mentioned, as well as electroanalgesia, reflexotherapy, auriculoacupuncture, and peridural anesthesia, which leaves possibilities of continued operator functioning. Conditions requiring surgery are examined, noting that decreased immunoreactivity observed among cosmonauts will necessitate gnotobiological chambers and specially designed surgeon's tools. The dangers inherent in brain edema in space during resuscitation, emergency infusion-transfusion therapy, and the existence of procedures for use in life threatening situations during extravehicular activity are indicated. M.S.K.

**A82-16951** **Biomedical aspects of artificial gravity.** A. A. Shipov, A. R. Kotovskaia, and R. R. Galle (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1117-1121. 17 refs.

Results of ground-based biomedical investigations of artificial gravity and flight experiments on the Soviet biosatellites Cosmos 782 and 936 are presented. The goal of the investigations was to determine the minimum efficient value of artificial gravity in long-term flights which may eliminate adverse effects of prolonged weightlessness. The development of methods to increase human tolerance to a rotating environment is given highest priority. The maximum angular velocity is determined to be 6 rpm, and the minimum level of the force of gravity is 0.3 g, with a radius of rotation of 10 m. D.L.G.

**A82-16953** **Trends in space life support.** A. I. Skoog (Dornier System GmbH, Friedrichshafen, West Germany) and A. O. Brouillet (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica,* vol. 8, Sept.-Oct. 1981, p. 1135-1146. 5 refs.

Trends in the development of candidate physico-chemical components for use in regenerative life support systems for future extended-duration-mission spacecraft are discussed. The development of life support systems which provide air revitalization, including

CO2 reduction, water reclamation, and limited waste management will require a two-fold approach due to complexities associated with the biological support systems. For longer duration manned space flights, such as permanently inhabited space stations, it is recognized that development of biological life support systems capable of generating food and regenerating wastes will be essential to reduce logistics costs. D.L.G.

**A82-16954** **Future investigations onboard Soviet biosatellites of the Cosmos series.** E. A. Il'in (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica*, vol. 8, Sept.-Oct. 1981, p. 1149-1157. 16 refs.

Rat experiments on Cosmos biosatellites have been conducted to furnish information concerning the effects of weightlessness, artificial gravity, and ionizing radiation combined with weightlessness on structural and biochemical parameters of animal bodies. Investigations of weightlessness effects on the cardiovascular and vestibular systems, higher nervous activity, skeletal muscles, and biorhythms of two rhesus monkeys are currently being developed and tested. A study of weightlessness effects on embryogenesis of rats and bioenergetics of living systems on the Cosmos biosatellites is also planned. Physiological investigations of non-human primates will be emphasized in future Soviet flight programs, with high priority given to cardiovascular function, fluid-electrolyte metabolism, interaction of sensory systems, and the musculo-skeletal system. D.L.G.

**A82-16955** **Human roles in future space operations.** D. R. Criswell. *(International Academy of Astronautics, International Symposium on Basic Environmental Problems of Man in Space, 6th, Bonn, West Germany, Nov. 3-6, 1980.) Acta Astronautica*, vol. 8, Sept.-Oct. 1981, p. 1161-1171. 45 refs. Research sponsored by the University of California.

Man's development in the biosphere from a competitor with other animals to a controller of mass flows equal to those of the biosphere is reviewed. The fundamental physical reasons for man's expansion into space are then considered: (1) more efficient equipment for conversion of solar energy into useful energy; (2) ability to handle progressively larger quantities of matter in more capital-efficient ways; (3) unlimited space within which to build new cumulated controlled connectivities (C + C + C) centers and (4) construction of environments within which decay of productive and accumulated capital can be minimized. Finally, several near-term and long-range research topics appropriate to human expansion into space are reviewed, including space stations, mixed crews, extended missions, and space colonies. J.F.

**A82-16968** † **Characteristics of loading hypoxia (Osobennosti gipoksii nagruzki).** M. M. Filippov (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 27, Nov.-Dec. 1981, p. 753-757. 13 refs. In Russian.

The physiological changes accompanying the oxygen insufficiencies present in the body during exercise are investigated. Determinations of respiratory, hemodynamic and gas exchange indicators, measurements of blood gas composition and acid-base status, and analyses of oxygen and carbon dioxide metabolism were performed for over 300 individuals of various ages and degrees of physical training at rest and during muscular activity at sea level and in the mountains. Loading hypoxia is found to be characterized by venous hypoxemia and hypercapnia, oxygen deficiency or oxygen debt at high levels of exertion, the build-up of underoxidized metabolites, and shifts in the acid-base status of the blood and blood buffering capacity, affecting the oxygen affinity of hemoglobin. The hypoxic state is also found to be accompanied by greater respiratory and circulatory system efficiency. Four stages of loading hypoxia are distinguished according to the degree of expression and the results of compensatory mechanisms. A.L.W.

**A82-16969** † **Oxygen tension in albino rat abdominal cavity organs in normo- and hyperoxybaria (O napriazhenii kisloroda v nekotorykh organakh briushnoi polosti belykh kris pri normo- i giperoksibarii).** I. F. Sokolianskii (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 27, Nov.-Dec. 1981, p. 758-761. 16 refs. In Russian.

The relation of the partial pressure of oxygen in the external medium to that in the liver, kidney, intestinal seromuscular layers and mucosal layer in the rat is investigated. Experiments were performed on animals exposed to oxygen partial pressures from 20 to 392.2 kPa, with tissue oxygen measured polarographically in room air, normobaric hyperoxia and hyperbaric hypoxia. The increase in oxygen partial pressure is reflected to varying degrees as an increase in the oxygenation of the various organs and tissues examined. At a hyperoxybaria of 392.2 kPa, the oxygen tension in the seromuscular layer of the intestines and the liver is observed to be maintained at a high level for as long as 120 min, although the peak in tension occurs before the end of this period. A.L.W.

**A82-16970** † **The state of the air-blood barrier in hyperoxia (Sostoianie aero-gematicheskogo bar'era pri giperoksii).** T. N. Kovalenko (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 27, Nov.-Dec. 1981, p. 762-767. 15 refs. In Russian.

The effects of short-term exposure to hyperoxia on the ultrastructure and thickness of the pulmonary air-blood barrier and the surface tension of pulmonary tissue extracts are examined in adult and 2-week-old rats breathing gas mixtures of from 40 to 90% O2 for 30 min. Signs of the nonuniform deterioration of the air-blood barrier are found in rat lung following the breathing of 90% O2 in nitrogen which are more pronounced and more frequent in the young animals. These degradations are accompanied by changes in pulmonary microcirculation, a thickening of the air-blood barrier, and an increase in pulmonary surface tension in the young rats only. The breathing of 40% O2 mixtures is not found to lead to any changes in these parameters in either age group. Results thus demonstrate the potential for damage of extended exposure to 90% oxygen mixtures, and the greater sensitivity of the organism to the effects of hyperoxia at the early stages in its development. A.L.W.

**A82-16971** † **Some characteristics of thermal adaptation in small laboratory animals (O nekotorykh osobennostiakh teplovoi adaptatsii melkikh laboratornykh zhivotnykh).** V. A. Lekakh, O. N. Lagunova, and M. L. Khalin (Donetskii Meditsinskii Institut, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 27, Nov.-Dec. 1981, p. 819-822. 12 refs. In Russian.

The applicability of the characteristics of thermal adaptation and tolerance observed previously in the rat to other types of small laboratory animals is investigated in heat acclimatization experiments involving guinea pigs. The experiments involved twice-weekly exposures of the animals to a temperature of 42 C for a period of 1 hour, followed by the evaluation of tolerance times at the same temperature. As with rats, the guinea pigs are found to exhibit a plateau in body temperature upon exposure to heat, the duration of which may be used to evaluate heat tolerance, although that of the guinea pig may reach 42.2-42.4 C, compared to the rat's 41.6-41.8 C. Heat training is observed to extend the length of this plateau period in most animals, although it has no significant effect on the rate of body temperature change or its plateau level. Considerable individual variability in adaptive capacities is also observed, however a significant correlation is found between the rate of temperature reduction in the recovery period and the extent of thermal tolerance increase in the training period. A.L.W.

**A82-17123** **Experimental biology and medicine in space.** Iu. G. Grigor'ev (Ministry of Health of USSR, Institute of Biophysics, Moscow, USSR). *Endeavour*, vol. 5, no. 4, 1981, p. 147-151. 20 refs.

The progress of spaceborne biological studies is reviewed. Early long duration flights such as Cosmos-110 and Zond-7 returned dogs and tortoises in healthy conditions, while muscular atrophy, a decrease in muscle strength, and osteoporosis were observed on rats onboard Cosmos satellites. Cosmos-782 demonstrated the worth of centrifugal inducement of one-third g to maintain normal physiological processes. Drosophilae onboard Bios II displayed lethal mutations, cross-overs, and multiple chromosome breaks in larval reproductive cells from space gamma radiation. The deceleration of heavy nuclei is estimated to irradiate 15,000 cells with several thousand rads, a level which can significantly affect highly differentiated cells. Plants have been found to require gravity for growth, while weightlessness does not affect processes which are not dependent on gravity, such as mammalian growth. M.S.K.

**A82-17133** **Robot with sense of touch (Roboter mit Tastsinn).** G. Hirzinger (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Dynamik der Flugsysteme, Oberpfaffenhofen, West Germany). *DFVLR-Nachrichten,* Nov. 1981, p. 38-41. In German.

A description is presented of investigations related to the development of computer-controlled manipulators (robots) with touch-sensor feedback systems, taking into account work conducted in West Germany. A robot is concerned with emulating the functions of the human arm. It has, therefore, a number of joints which can be individually controlled. Many of the current robots cannot yet be programmed for the Cartesian space to which man has become accustomed. A system of computer programs was developed for the calculation of the data needed by the robot to execute the required motions. Attention is also given to a three-dimensional force-moment sensor, two alternate approaches for the sensor signal feedback system, and robot languages. Applications involving an employment of the touch sensor are also discussed, taking into account the trimming of cast-metal components and assembly operations. G.R.

**A82-17138** † **An investigation of memory during the process of adaptation to mountain conditions (Issledovanie pamiati v protsesse adaptatsii k usloviiam vysokogor'ia).** V. D. Bakharev (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 963-969. 8 refs. In Russian.

Changes in verbal memory arising during the period of human adaptation to mountain conditions are investigated. Residents of Central Asia and Pskov were tested for visual, short-term, long-term, operative, visual shape, associative, involuntary and auditory memory during stays on the plains and in the Pamir mountains at an altitude of 3400-3600 m. Reductions in all memory indicators of 10-20%, and in some cases 30%, are found during the initial period of altitude adaptation, with the peak in memory decline occurring at the end of the second day at altitude. By the 7-8th day of adaptation, the indicators of memory are restored to levels close to the original, however do not reach control levels even after 50 days. The worsening of memory is less pronounced in the residents of Central Asia than in residents of the central region, while heavy physical loads are observed to have a negative influence on memory and mental capacity. Finally, it is found that the neuromodulator (8-arginine)-vasopressin improves human memory, particularly under mountain conditions. A.L.W.

**A82-17139** † **The circadian organization of the circulatory and respiratory systems of Antarctic workers (Tsirkadnaia organizatsiia sistem krovoobrashcheniia i dykhaniia u poliarnikov v Antarktide).** V. A. D'iachkov (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR) and M. P. Agadzhanian and A. N. Kotov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 974-980. 18 refs. In Russian.

The dynamics of pulmonary diffusing capacity and its membrane and capillary components are investigated in humans under conditions of prolonged motor activity restriction. Steady-state determinations of pulmonary diffusing capacity were made in subjects undergoing 49 days of strict antiorthostatic hypokinesia, strict antiorthostatic hypokinesia while exposed to hypoxic gas mixtures for a period of 3 hours twice daily, and antiorthostatic hypokinesia while performing physical exercises for a period of 1 hour twice daily. An initial increase, followed by a decrease to below original values then a reestablishment of the original level of pulmonary diffusion capacity is found which is indicative of blood redistribution. The breathing of hypoxic gas mixtures or the performance of exercises as prophylactic measures is observed to have no effect on the dynamics of diffusing capacity variations, however it tends to diminish the markedness of shifts and their duration. These prophylactic measures are also observed to maintain a high degree of correlation between diffusing capacity and respiratory volume. A.L.W.

A method is developed for the on-line processing of EEG data to obtain early indications of the onset of acute oxygen intoxication in patients undergoing hyperoxic treatments. The method, which provides for the spectral analysis of EEGs, is applied to data obtained in the monitoring of patients with either permanent injuries to the peripheral nervous system without brain pathology or vascular or traumatic brain injuries during hyperbaric oxygenation at oxygen partial pressures from 130 to 297 kPa. Early signs of the breakdown of the hyperoxia compensation in healthy people are found to include the appearance of slow rhythms in the EEG, the reduction in the amplitude of pneumogram respiratory waves, and the appearance or amplification of respiratory arrhythmias in the pulse. The algorithm finally adopted for the prediction of acute oxygen intoxication calculates the contracted modular shape coefficient of the EEG, and becomes most effective during a voluntary hyperventilation maneuver. In the case of patients with initially disturbed EEG patterns, it is recommended that EEG norms be obtained during the first few minutes of hyperoxic treatment to be used as standards for the remainder of the exposure. A.L.W.

**A82-17142** † **The effects of operator activity on the diurnal rhythm of physiological functions (Vliianie operatorskoi deiatel'nosti na sutochnuiu ritmiku fiziologicheskikh funktsii).** V. V. Romanov and A. N. Popov (Kalininskii Politekhnicheskii Institut, Kalinin, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 990-995. 15 refs. In Russian.

The effects of operator activity of various types on the daily rhythms of body temperature and cardiovascular indicators are investigated. Measurements of the daily variation in body temperature, pulse rate, arterial pressure at rest and after physical loading were made in 441 operators working uninterrupted for 6 or 12 hours or in an expectation regime for 24 hours. Increased operator workloads are found to lead to a significant decrease in the amplitudes of the daily oscillations of body temperature and cardiovascular indicators, while mean daily body temperature is unchanged and heart rate is somewhat decreased. Decreases in body temperature and heart rate at the end of the working shift are attributed to the limited motor activity involved in operator tasks. It is suggested that, rather than the absolute values or changes in pulse rate or arterial pressure, a circulatory effectiveness coefficient measured during a functional test be used to assess operator fatigue. A.L.W.

**A82-17143** † **Northern pulmonary arterial hypertension (Severnaia legochnaia arterial'naia gipertenziia).** A. P. Milovanov, B. V. Noreiko, and G. I. Moroshnichenko (Akademiia Meditsinskikh Nauk SSSR, Moscow; Blagoveshchenskii Meditsinskii Institut, Blagoveshchensk, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 996-1003. 9 refs. In Russian.

The development of pulmonary artery hypertension in persons exposed to conditions of the far north over extended periods of time is investigated. Zonal measurements of blood pressure in the pulmonary circulation ware made for 252 healthy male inhabitants of Pevek on the Arctic coast of the northeastern Soviet Union, Nar'ian-Mar in the polar region of the European north, and the Nenetsk autonomous okrug as a function of length of stay in their respective regions. Comparison with a control group examined at Blagoveshchensk in the winter reveals three stages of pulmonary hypertension in the northern inhabitants. The first stage, apparent after 3-12 months, is characterized by a threefold rise in pulmonary arterial pressure with an insignificant increase in systemic circulation. The second stage, lasting from the first to the tenth year of exposure, is marked by a decrease and eventual stabilization of pulmonary pressure at a level twice that of normal, which is observed in natives of the region and second and third generation colonists. After about 10 years of habitation in the north, pulmonary hypertension is again observed to increase, with a maximum in the lower lung regions, and to be accompanied by complaints of dyspnea during sudden changes in the weather, indicating partial pulmonary deadaptation. A.L.W.

**A82-17144 † Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment (Osobennosti pokazatelei serdechnogo ritma v norme i pri psikhicheskoi dezadaptatsii).** V. M. Vorob'ev and V. P. Chebakov. *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 1004-1010. 11 refs. In Russian.

The interrelationships of cardiac rhythm indicators in the norm and in persons with different degrees of mental maladjustment are compared. Computerized processing of electrocardiographic data was used to determine the correlations between indicators of cardiac rate, quality and reactivity to orthostatic tests, clinostatic tests, mental workloads and rest following physical loads in military school candidates with completely normal psychological characteristics, normal psychological characteristics with personality accentuations, and pathological maladjustments. The presence of a psychic maladjustment is observed to lead to a breakdown in the correlations between the various cardiac indicators, particularly between those of reactivity and quality. In addition, new correlations are also observed occasionally in cases of pathological psychologies which are not found in normal groups. Changes in the correlation relationships of cardiac rhythm indicators with varying degrees of mental adaptation are explained by general mechanisms for the regulation of mental and vegetative functions. A.L.W.

**A82-17145 † The effects of bicycle ergometer exercise on plasma amino acid contents in athletes (Vliianie veloergometricheskoi nagruzki na soderzhanie aminokislot v plazme u sportsmenov).** V. G. Kukes, A. S. Nasonov, L. P. Belianova, E. N. Golubeva, L. A. Baratova, A. M. Alaverdian, and A. B. Burkashov (I Moskovskii Meditsinskii Institut; Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 1011-1015. 18 refs. In Russian.

The effects of bicycle ergometer exercise to the limit on the contents of free amino acids in the blood plasma of elite athletes are investigated in a study of the contributions of amino acids to muscular energy metabolism. Amino acid analyses were performed on the blood of six biathlon competitors and eight skaters 15 min before and 3 min after bicycle ergometer exercise with stepwise increasing loads starting at 1 W/kg body weight. In the skaters, who were found to exhibit a greater work capacity, plasma alanine contents are observed to increase by 52.6% with respect to initial levels in the post-exercise phase, while the levels of the remaining amino acids and total amino acid quantities did not change significantly. The biathlon competitors, having performed a lesser amount of work, exhibited no significant change in individual amino contents or total free amino acids following exercise. The increase in alamine contents in the better-conditioned athletes is attributed to the glucose-alanine cycle in which alanine is synthesized by the transamination of pyruvate during glycolytic glucose oxidation in muscles. A.L.W.

**A82-17146 † The dynamics of cardiac rhythm parameters during work under various loads (Dinamika parametrov serdechnogo ritma vo vremia raboty s razlichnoi nagruzkoi).** L. A. Beliakova and V. A. Poliantsev (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 7, Nov.-Dec. 1981, p. 1016-1022. 14 refs. In Russian.

Differences in the dynamics of cardiac activity indicators appearing with different work loads are investigated in air traffic controllers with different levels of experience. Cardiac intervalograms were obtained by a telemonitoring system for 24 controllers aged between 25 and 30 years during the course of morning and evening shifts of duration 6 and 7.5 hours, respectively, and compared with simultaneous work levels. The cardiac indicators found to undergo the greatest variations in the presence of constantly varying work loads include parameters such as heart rate, mean square R-R interval deviation, P,T peak amplitude and ST interval displacement. Heart rhythm is observed to stabilize under increased loads in the more experienced controllers, corresponding to a more optimal state for task performance. A stabilization of heart rhythm is observed in all controllers toward the end of the shift, indicative of sympathoadrenal activation. The technique of cardiac monitoring throughout the working shift is recommended as a means for the detection of possible cardiac pathology in the air traffic controller. A.L.W.

**A82-17360 † 'Hot spots' in the problem of the origin of life ('Goriachie tochki' v probleme proiskhozhdeniia zhizni).** L. M. Mukhin. In: The problem of the search for extraterrestrial civilizations. Moscow, Izdatel'stvo Nauka, 1981, p. 148-154. In Russian.

Areas presenting the most difficulty to the understanding of the origin of life are considered. The conditions present on the primitive earth are discussed, and probable siting of the nonequilibrium thermodynamic synthetic processes necessary for life in regions of underwater vulcanism and hydrothermal features is pointed out. The problems of the origin of protein synthesis in the absence of enzymes and the translation apparatus, and the evolution of the genetic code are then examined, and experimental evidence demonstrating the virtual identity of the mechanism of protein and nucleic acid synthesis over the course of 3.5 billion years is indicated. A possible sequence of events giving rise to the present system of template coding is then proposed which is based on protein self-assembly becoming associated with membrane-facilitated nucleic acid metabolism in protocells. A.L.W.

**A82-17361 † Prospects for the detection of interstellar biological molecules (Perspektivy obnaruzheniia mezhzvezdnykh biologicheskikh).** V. I. Slysh. In: The problem of the search for extraterrestrial civilizations. Moscow, Izdatel'stvo Nauka, 1981, p. 155-160. 10 refs. In Russian.

The possibilities of the existence of complex biological molecules in interstellar space and of the detection of such molecules by astronomical methods are discussed. Molecular data from radioastronomical observations and laboratory experiments is presented which demonstrates the possibility of the existence of the physical conditions and precursor molecules necessary for the formation of complex molecules such as amino acids and nucleotides in interstellar space. Possible spectroscopic and direct means for the detection of such molecules are then examined, and it is concluded that amino acids and the components of nucleic acids may be detected by radioastronomical methods, whereas the search for protein molecules and DNA is possible through the use of X-ray astronomy and direct sampling. A.L.W.

**A82-17362 † Organic compounds in space and the problem of the origin of life (Organicheskie soedineniia v kosmose i problema proiskhozhdeniia zhizni).** V. S. Strel'nitskii. In: The problem of the search for extraterrestrial civilizations. Moscow, Izdatel'stvo Nauka, 1981, p. 161-171. 20 refs. In Russian.

Results of the search for and investigations of organic compounds in astronomical objects are presented in view of the importance of such molecules for the origin of life. Studies of various types of organic compounds in meteorites and comets are reviewed, and detections of aliphatic and aromatic hydrocarbons, heterocyclic nitrogenous bases, sugars and amino acids in carbonaceous chondrites and of HCN and CH3CN in Comet Kohoutek are noted which confirm the possibility of organic synthesis in the protoplanetary nebula. The discovery and classification of interstellar molecules are then reviewed, and the types of objects in which they are found are indicated, including diffuse clouds, dark dust clouds, globules, molecular clouds and circumstellar envelopes. The possible universal character of the processes of pre-biotic chemical evolution is discussed. It is shown that the necessary build-up of substances necessary for the appearance of life in the Galaxy is occurring on a large scale, although it is emphasized that this is not necessarily evidence for the prevalence of life. A.L.W.

**A82-17426 * Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980.** Meeting sponsored by the Barany Society, New York Academy of Sciences, NASA, et al. Edited by B. Cohen (New York, City University, New York, NY). *New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981. 905 p.

Papers are presented showing recent progress in the understanding of the processing of visual and vestibular signals by the central nervous system to produce eye movements and postural responses. Specific topics include the directional sensitivity of hair cells to hair bundle deflection, the effects of gravity on rotatory nystagmus, the reticulovestibular organization associated with horizontal fast eye movement, the pathways controlling the extraocular eye muscles, the organization of visual-vestibular interaction in vestibular neurons, motion sickness due to vision reversal in stroboscopic light, and vestibular habituation during sinusoidal rotation. Attention is also given to vestibulo-ocular, vestibulocollic and cervicocollic reflexes, visual mossy fiber inputs to the flocculus, directional plasticity of the vestibulo-ocular reflex, the relation of active head rotation with eye-head coordination, instability in the optokinetic-vestibular system as an explanation for periodic alternating nystagmus, the effects of visual and nonvisual fixation on vestibular systagmus, interaction of saccades with the vestibulo-ocular reflex, and the role of the plantar mechanoreceptor in equilibrium control. A.L.W.

**A82-17427 Directional sensitivity of individual vertebrate hair cells to controlled deflection of their hair bundles.** S. L. Shotwell, R. Jacobs, and A. J. Hudspeth (California Institute of Technology, Pasadena, CA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 1-10. 12 refs. Research supported by the William Randolph Hearst Foundation, Ann Peppers Foundation, and Pew Foundation; Grants No. NIH-NS-13154; No. NIH-GM-00086.

Observations of the directional sensitivity of individual vertebrate sensory hair cells to displacements of their hair bundles are reported. Experiments were performed by the mechanical stimulation of the hair bundles at the apical ends of hair cells of bullfrog saccular maculi by fine glass capillaries slipped over the distal ends of the bundles, simultaneously with the recording of intracellular receptor potential. Deflection of the tip of the hair bundle within the hair cell plane of symmetry is observed to produce a graded depolarization of amplitude 4-20 mW when the motion is towards the kinocilium, and a graded hyperpolarization of about one fifth this magnitude when the motion is in the opposite direction. Stimulation in the plane perpendicular to the hair cell plane of symmetry produces little or no receptor potential, while stimulation in an intermediate direction produces a response that varies approximately as the cosine of its angle to the symmetry axis. Results suggest that the directional sensitivity of the hair bundle is conferred by the differing heights of the stereocilia along the plane of symmetry. A.L.W.

**A82-17428 The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report.** H. hask-Andersen, G. Bredberg, L. Lyttkens, and G. Loof (University Hospital, Uppsala, Sweden). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 11-19. 23 refs. Research supported by the Statens Medicinska Forskningsrad. SMF Project 3542; SMF Project 3908.

**A82-17429 Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals.** J. I. Simpson and W. Graf (New York University, New York, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 20-30. 51 refs. Research supported by the Irma T. Hirsche Trust; Deutsche Forschungsgemeinschaft Contract No. Gr-688/1; Grant No. PHS-NS-13742.

The basis for the differences in the directions of compensatory eye movements in lateral-eyed and frontal-eyed animals is investigated by the determination of the orientations of the vertical semicircular canals and the insertions and lines of action of the oblique and vertical recti muscles in species with differing interocular angles. Muscle and vestibular orientations and muscle actions were measured or obtained from the literature for pigmented and albino rabbits, albino guinea pigs, and pigmented cats,, and compared with the literature data for humans. The pulling directions of the superior oblique and superior rectus muscles are found to change relative to the optic axis so that the ipsilateral vertical canal to which each muscle is most nearly parallel remains the same. Changes in the insertion points of the superior muscles on the ocular globe combine with the changes in lines of action to produce different secondary kinematic actions leading to different types of compensatory eye movements upon exposure of the semicircular canals to rotational stimuli. A.L.W.

**A82-17430 Phasic components of frog semicircular canal.** Y. Harada and K. Hirata (Hiroshima University, Hiroshima, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 31-39. 7 refs.

The sensory adaptation characteristics of the ampulla of the isolated frog semicircular canal are investigated. Vertical posterior semicircular canals isolated together with their ampullas and the distal stump of the ampullar nerve were stimulated by a mechanical device inducing ampullofugal currents, and the induced action potentials in the ampullar branch of the vestibular nerve were recorded. Observations of the time course of nerve activity indicate that the integrated nerve activity recorded reflects mainly the high-amplitude action potentials. Maximum values of the integrated nerve activity are found to be proportional to the logarithm of stimulus strength, and to the displacement velocity of the mechanical stimulation. When a fluid flow pulse of long duration is applied to the canal, integrated nerve activity is found to decrease exponentially during a single pulse, and to decrease with successive pulses less than 5.0 sec apart. Finally, experiments with superimposed sequential stimulation applied at various times indicate the presence of adapting units with different thresholds. A.L.W.

**A82-17431 * Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis.** J. M. Goldberg and C. Fernández (Chicago, University, Chicago, IL). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 40-43. 14 refs. Grants No. NIH-NS-01330; No. NGR-14-001-225.

The physiological basis of the nystagmus produced by rotation about an earth-horizontal axis is investigated with particular emphasis on the unidirectional nystagmus attributed to a bias component. Eye movement recordings were made with dc electro-oculography in alert squirrel monkeys and afferent responses were recorded from semicircular canals and otolith receptors of anesthetized animals upon rotations in the pitch and yaw planes. The eye-movement recordings show the rotation responses in the squirrel monkey to resemble those of other species, including persistent horizontal and vertical nystagmuses during yaw and pitch rotations, respectively, a unidirectional nystagmus at low rotation speeds, and postrotatory responses of relatively small amplitude and duration. The vestibular nerve recordings do not show a directionally specific dc response that can account for the bias component, but instead exhibit sinusoidal responses of peak amplitudes 0-15 and 25-75 spikes/sec for the canals and otolith, respectively. Results thus indicate that the dc signal to the oculomotor centers responsible for the nystagmus is of central origin, most likely based on some transformation of the otolith signals. A.L.W.

**A82-17432 Effects of gravity on rotatory nystagmus in monkeys.** T. Raphan, B. Cohen (New York, City University, New York, NY), and V. Henn (Zürich, Universität, Zurich, Switzerland). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 44-55. 28 refs. Swiss National Science Foundation Grant No. 3,343,0,78; Grant No. NIH-NS-00294.

The effects of rotation about an off-vertical axis on the dynamics of the slow-phase velocity of the induced nystagmus are investigated. Eye movements induced by optokinetic stimulation or by angular rotation about vertical or off-vertical axes were recorded by dc electro-oculography in 12 monkeys of various species seated within a closed drum and viewing a series of alternating vertical black and white stripes. Slow-phase velocity profiles induced by steps of angular velocity indicate that a tilt of the rotation axis 50 deg from the vertical does not affect the initial peak velocity or gain of the vestibulo-ocular reflex, however leads to the decay of the slow-phase velocity to zero, similar to the effects of vision. Off-vertical axis rotation is also observed to cancel the postrotatory nystagmus for velocities up to 50-60 deg/sec, and reduce it relative to that encountered in vertical rotation at higher velocities. In addition, experiments with changes in the inclination of the rotation axis during rotation suggest that the velocity storage mechanism is the same for the generation of continuous nystagmus during visual and vestibular stimulation about the vertical axis and for off-axis rotations. The results are interpreted in terms of a mechanism for nystagmus induced by off-vertical axis rotation which is based on the role of the velocity storage integrator in producing slow changes in eye velocity are a result of otolith and cupula stimulation. A.L.W.

**A82-17433** **Dynamic characteristics of the otolithic oculomotor system.** T. Tokita, H. Miyata, M. Masaki, and S. Ikeda (Gifu University, Gifu, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 56-68. 11 refs.

Transfer functions of the opto-oculomotor, otolithic oculomotor and opto-otolithic oculomotor systems in humans are investigated. Bode plots of the transfer functions were obtained in 10 healthy adults and five patients with bilateral loss of labyrinth excitability performing a vertical tracking test, an up-down passive displacement, and a running test in the light and the dark. The gain and phase of the opto-oculomotor system as indicated by the tracking test are found to be flat in the frequency range 0.3 to 1.0 Hz. In the up-down test in the dark, the gain of the otolithic oculomotor system increased linearly with an increase in frequency from 0.7 to 5 Hz, while in the light, the gain and phase were flat from 0.3 to 2.5 Hz. Transfer functions calculated from vertical head acceleration as input and vertical eye movement as output in the running test are observed to be similar in the dark and the light, with gain decreasing linearly with frequency increase from 0.3 to 3.0 Hz. The opto-oculomotor responses of the patients with bilateral labyrinth excitability losses are found to be the same as those of normal subjects, while three patients exhibited no eye movement response and two exhibited a periodic eye movement in the up-down test. Rhythmic eye movements corresponding to head movements are also observed in the patients during the running test, although the values of gain and phase are scattered. Results suggest that factors other than the otolithic oculomotor response may produce the observed eye movements. A.L.W.

**A82-17434** **Binocular counterrolling in humans with unilateral labyrinthectomy and in normal controls.** S. G. Diamond and C. H. Markham (California, University, Los Angeles, CA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 69-79. 15 refs.

**A82-17435 *** **Ocular torsion on earth and in weightlessness.** L. R. Young, B. K. Lichtenberg, A. P. Arrott, T. A. Crites, C. M. Oman, and E. R. Edelman (MIT, Cambridge, MA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 80-92. 16 refs. Grant No. NsG-2032; Contract No. NAS9-15343.

Otolith function is studied by means of measurements of ocular torsion under various acceleration environments on earth and in weightlessness. Photographic measurements of ocular torsion as indicated by the rotation of landmarks on the iris with respect to head-fixed fiducial marks were obtained in subjects undergoing horizontal linear acceleration in a ground-based version of the space sled, lateral acceleration from weightlessness during pullout from the free-fall portion of parabolic flight, and optokinetic stimulation about the roll axis in the supine position in the laboratory and during weightlessness. The responses of ocular torsion to horizontal acceleration are in agreement with a simple low-order linear system with a dominant time constant of 0.33 sec, with a transfer function fit by a model with a pure delay of 0 to 400 msec and a first-order lag. In the pullout experiment, torsion was not observed in response to the onset of acceleration in the right-ear-down position, although it was present in response to the lateral stimulus. Results of the roll vection experiments indicate the independence of ocular torsion and visually induced tilt. In addition, an automatic video system using a soft contact lens target is presented which has been developed for ocular torsion measurements. A.L.W.

**A82-17436** **Neuronal interaction between ipsilateral medial and lateral vestibular nuclei.** I. Matsuoka, J. Ito, M. Sasa, S. Takaori (Kyoto University, Kyoto, Japan), and M. Morimoto (Kochi Medical School, Kochi, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 93-101. 14 refs.

The existence of direct influences of neurons in the medial vestibular nucleus (MVN) on those of the lateral vestibular nucleus (LVN) that receive input from the peripheral nerve is investigated. Experiments were performed on anesthetized cats by electrophysiological techniques of single neuron activity recording and the horseradish peroxidase retrograde transport method. Stimulation of the MVN is found to lead to spike generation with short latency in LVN neurons monosynaptically activated by vestibular nerve stimulation, although these neurons could not respond to a high-frequency MVN stimulation. Other LVN neurons monosynaptically activated by vestibular nerve stimulation were inhibited by a conditioning stimulus to the MVN, although it is not certain whether the inhibition was monosynaptically produced. The results of the horseradish peroxidase study suggest the existence of direct innervation from the MVN to the LVN, as horseradish peroxidase positive neurons were found in the MVN following tracer ejection in the immediate vicinity of LVN neurons. The results suggest the existence of both excitatory and inhibitory input from the MVN to LVN neurons monosynaptically activated from the vestibular nerve. A.L.W.

**A82-17437** **The ascending tract of Deiters' and horizontal gaze.** S. M. Highstein and H. Reisine (Albert Einstein College of Medicine, Bronx, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 102-111. 29 refs.

The signals carried by the ascending tract of Deiters' (ATD), one of two pathways by which the medial rectus motoneuron pool receives direct signals from the posterior brain stem to maintain horizontal gaze during head motion, are investigated. Horseradish peroxidase studies confirm that the ventral lateral and medial vestibular nuclei contain a mixture of neurons that relay horizontal semicircular canal signals to the abducens nucleus via a direct projection and to the medial rectus subgroup via the ATD, while the results of acute lesions indicate that the ATD follows a middle course between the medial longitudinal fasciculus and the brachium conjunctivum in the pontine tegmentum. Intracellular recordings from medial rectus motoneurons indicate the comparable synaptic potency of the ATD and internuclear projections. Studies of inputs to the ATD neurons in anesthetized paralyzed cats provide evidence for chemical synaptic transmission between vestibular primary afferent and ventral lateral vestibular neurons, and reveal ATD neurons to be strongly modulated by contralateral vestibular stimulation. Finally, studies in the decerebrate and alert cat reveal the ATD neurons to exhibit eye positionbut little rapid eye movement sensitivity, while a strong modulation of activity is obtained in response to head rotation in the horizontal plane. Results suggest that ATD and abducens internuclear signals interact at the level of medial rectus cells to produce the horizontal vestibulo-ocular reflex and conjugate horizontal gaze. A.L.W.

**A82-17438** **Nonlinear characteristics of single neurons in the vestibular nuclei.** J. H. Ryu, B. F. McCabe, and R. W. Babin

(Iowa, University, Iowa City, IA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 112-129. 12 refs. Research supported by the U.S. Veterans Administration and University of Iowa.

The dynamic properties of the semicircular canal system are investigated by the measurement of the responses of single neurons in the vestibular nuclei to canal stimulation. Extracellular recordings of the activity of 99 vestibular nucleus neurons were obtained in cats undergoing impulse and step stimulation of the horizontal canals by angular acceleration on a rate table. A nonlinear response of the vestibular neurons to canal stimulation is evidenced by a nonlinear decrease in the time to reach the maximum response level with an increase in stimulus magnitude, a nonlinear increase in maximum response level with increasing stimulus magnitude, and the fact that the neural response to excitatory stimulus is not the mirror image of the response to an inhibitory stimulus. It is found that the nonlinear response cannot be accounted for by simulations based on several linear mathematical models of vestibular canal function. It is suggested that the nonlinearities observed may arise from (1) the nonlinear behavior of the end organ; (2) central nervous system influence; or (3) the inherent neural properties of the vestibular nuclei. **A82-17439** **Reticulovestibular organization participating in generation of horizontal fast eye movement.** S. Sasaki and H. Shimazu (Tokyo, University, Tokyo, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 130-143. 26 refs.

The functional characteristics and axonal projections of the excitatory reticular burst neurons (EBNs), which have been identified as immediate premotor neurons participating in the activation or suppression of abducens motor activity during horizontal fast eye movement, are investigated. Spike recordings were obtained from 62 individual burst neurons in the dorsomedial reticular formation exhibiting activity only at the quick excitatory phase of the ipsilateral abducens nerve in cats undergoing horizontal rotation or electrical stimulation of the vestibular nerve. EBN discharge patterns indicate the presence of two classes of unidirectional burst neurons, with medium and long lead times. Most EBNs were antidromically activated by microstimulation within the ipsilateral abducens nucleus, indicating that the neuron sends its axon to or through the nucleus. Both the medium- and long-lead EBNs identified by antidromic activation are located in a region immediately rostral to the abducens nucleus. Microelectrode tracking reveals the axons of the EBNs to also project caudally, with collaterals to the inhibitory burst neurons and the medial vestibular nucleus. Microstimulation of the EBN area results in responses in the abducens motoneurons suggestive of monosynaptic connections with facilitation, and spike characteristics in the inhibitory burst nuclei and the medial vestibular nucleus indicating monosynaptic excitatory connections. **A82-17442** **Some thoughts about the three neurons in the vestibular ocular reflex.** R. Baker, C. Evinger, and R. A. McCrea (New York University, Medical Center, New York, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 171-188. 77 refs. Grants No. PHS-NS-13742; No. NIH-EY-02007.

Conceptual and experimental progress in the understanding of the organization and functioning of the three-neuron arc believed to produce compensatory eye movement following head rotation is outlined. Following a brief review of the purpose of the vestibular-ocular reflex (VOR) and the type of information encoded in the first- and second-order vestibular neurons and the motoneuron, measurements of the discharge rates of the primary afferent vestibular neurons and the secondary vestibular neurons in cats and primates are presented, and the similarity of central VOR organization and presumably neural processing in the two species is noted. It is argued that understanding of the three-neuron pathway has important implications for the central organization of other oculomotor subsystems, and for fixation. Difficulties in modeling the VOR with neurons reflecting population values are pointed out, and a possible solution based on tuned channels responding selectively throughout the oculomotor range to specific head movement frequencies is suggested. Finally, morphological evidence supporting the location of the phase integrator responsible for providing a second source of input to the extraocular motor nuclei in the prepositus nucleus is presented. **A82-17444** **Is transmission between the vestibular type I hair cell and its primary afferent chemical.** D. A. Schessel and S. M. Highstein (Albert Einstein College of Medicine, Bronx, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 210-214. 17 refs.

A morphophysiological study is presented of the nature of the transmission between the vestibular type I hair cell and the primary afferent almost completely surrounding it in a calyx configuration. The study was performed with intracellular electrodes loaded with horseradish peroxidase to record from irregular fibers in the vestibular primary afferents of the horizontal semicircular canal of the lizard Calotes versicolor. All the irregular fibers injected with horseradish perioxidase are observed to terminate with calyceal endings in the cristae and to be innervated by one to five type I hair cells. The frequency and pattern of subthreshold activity in the neurons are characteristic of chemical synaptic transmission rather than electronic, although the shape of the depolarizations is not typical of chemical excitatory postsynaptic potentials. **A82-17445** **Organization of the avian accessory optic system.** N. C. Brecha and H. J. Karten (New York, State University, Stony Brook, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 215-229. 46 refs. Grants No. NIH-NS-12078; No. NIH-EY-02146.

The organization of the accessory optic system (AOS) and its possible role in oculomotor function in birds are discussed. Studies in pigeons demonstrating the connection of the basal optic root with displaced ganglion cells of the contralateral retina which may be involved in the detection of movements in peripheral visual fields are noted. The projections of the nucleus of the basal optic root complex found on the vestibulocerebellum, inferior olivary complex and oculomotor complex are examined which support the contention that the AOS plays a role in oculomotor function. Electrophysiological and behavioral studies also suggesting the role of the

AOS in oculomotor function, possibly in the initiation of an orienting movement of the eyes and neck and/or the stabilization of eye and neck movements, are pointed out. A.L.W.

Research supported by the Dr. Eric Slack-Gys Foundation; Swiss National Science Foundation Grants No. 3,505,79; No. 3,616,80.

Experiments performed to examine the pathways mediating the optokinetic responses of vestibular nuclei (Vn) in the rat and cat are described. Single unit electrooculogram recordings were made in alert, both paralyzed and unparalyzed, rats and cats with or without brain lesions. The animals' eye movements elicited in the dark by trapezoidal or sinusoidal rotation of a Toennis turntable were tracked to identify type I or type II neurun excitement. All animals were sacrificed after the experiment and the brain lesions were identified. It was found that the pretectum is the first central relay in the horizontal optokinetic reflex path through Vn, and that the nucleus reticularis tegmenti pontis projects by way of oligosynaptic chains to Vn. Further experiments to find an intermediary neuron between the pretectum and Vn are indicated. M.S.K.

**A82-17449 Circularvection - Psychophysics and single-unit recordings in the monkey.** U. Büttner and V. Henn (University Hospital, Zurich, Switzerland). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 274-283. 21 refs. Swiss National Science Foundation Grant No. 3,343,78.

Experiments are carried out to explore the upper frequency limit of sinusoidal rotation of the visual surround, which can lead either to circularvection (CV) in humans and to the modulation of vestibular-unit activity in monkeys. Two paradigms are used in the experiments. In the first, human subjects are exposed to sinusoidal rotation of an optokinetic cylinder totally enclosing the subject. Stimulus frequency of cylinder rotation is increased until the subjects no longer experience CV, perceiving only the motion of the surround. All subjects experience at least partial CV, even at stimulus frequencies above 1 Hz. In the second paradigm, monkeys are exposed to sinusoidal cylinder rotation of differing frequencies, and single-unit responses are measured in the vestibular cortex. Comparison of these responses with those of the vestibular nuclei shows that cortical neurons respond over a wider range of visual frequencies and therefore must receive additional visual input. C.R.

**A82-17450 Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey.** B. Adler, G. Curio, O.-J. Grüsser, M. Pause, U. Schreiter, L. Weiss (Berlin, Freie Universität, Berlin, West Germany), and H. Collewijn (Berlin, Freie Universität, Berlin, West Germany; Rotterdam, Universiteit, Rotterdam, Netherlands). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 284-302. 26 refs. Research supported by the European Science Foundation; Deutsche Forschungsgemeinschaft Contract No. Gr-161.

It is shown that Sigma-phenomena can be elicited not only by unidimensional periodic stimuli that are stabilized on the retina but also by (1) two-dimensional stimulus patterns composed of equidistant dots; (2) spatial periodic stimuli, the periodicity of which is not present on each retina but generated on the cyclopean retina; (3) three-dimensional objects of a spatially periodic structure; and (4) two-dimensional random dot patterns without any spatial periodicity. It is also demonstrated that constant flash intervals are not requisite for Sigma-movement, that a regular interaction occurs between the vestibulo-ocular reflex and the Sigma-movement, and that Sigma-phenomena can be elicited in awake monkeys. The phenomenon is thus accessible to further neurophysiological exploration. C.R.

**A82-17451 Motion sickness due to vision reversal - Its absence in stroboscopic light.** G. Melvill Jones and G. Mandl (McGill University, Montreal, Canada). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 303-311. 31 refs.

The modification of oculomotor control incurred by a period of vision reversal in stroboscopic light was examined over an extended frequency range to detect physiological correlates that may account for the absence of motion sickness under these conditions. Adaptive changes were found over a broad frequency spectrum after vision reversal in normal light, although the changes were restricted to a low frequency range in the stroboscopic illumination. The physiological drive to bring about adaptive change was considerably attenuated by the stroboscopically illuminated environment with specific elimination of the adaptive response in the range of 1.75-3.0 Hz, which implies a functional association between the incidence of motion sickness and the prevailing strength and/or frequency range of the adaptive drive. D.L.G.

**A82-17452 Natural retinal image motion - Origin and change.** H. Collewijn (Rotterdam, Universiteit, Rotterdam, Netherlands), A. J. Martins, and R. M. Steinman (Maryland, University, College Park, MD). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 312-329. 14 refs. NSF Grants No. BNS-77-16474; No. BNS-80-25344; No. BNS-80-13508.

The true function of the vestibulo-ocular reflex (VOR) is thought to be more subtle than has been suspected. It is contended that the VOR serves not simply to stabilize the retinal image of a fixated object during movement but, rather, to produce and maintain the retinal image motion within each eye and between the eyes that is optimal for binocular vision. It is shown that compensation is rarely virtually perfect; even when virtually perfect in one eye, it is not in the other, leading to noncorrespondence of fixation positions between the eyes and high vergence velocities. It is also shown that the degree of compensation in the light is the same with active and passive rotations and that the VOR in the light adapts completely within minutes. The VOR in the dark is found to adapt within minutes to as much as 90% of the required change. C.R.

**A82-17453 Vestibular habituation in man and monkey during sinusoidal rotation.** J. Jäger and V. Henn (University Hospital, Zurich, Switzerland). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 330-339. 15 refs. Swiss National Science Foundation Grant No. 3,343,0,78.

Vestibular habituation experiments were performed in monkeys and humans to determine what stimuli lead to habituation, how it relates to unit activity in the neurons along the vestibulo-ocular reflex, and how animal experiments can be related to human physiology and the sensation of motion. Experiments on vestibular habitation by repeated steps of angular velocity led to a shortening of nystagmus and to essentially similar results for humans and monkeys. High-frequency sinusoidal rotation above 0.1 Hz was found to be ineffective, while low-frequency stimulation from 0.0015 to 0.05 Hz led to a dramatic shortening of time constants after only a few cycles of stimulation. Habituation with sinusoidal velocity profiles were reported as a pleasant experience, which stands in contrast to the experience with the programs that are aimed at reducing motion sickness. D.L.G.

**A82-17454** **Unilateral habituation of vestibulo-ocular responses in the cat.** M. Jeannerod, G. Clement, J. H. Courjon (Institut National de la Santé et de la Recherche Médicale, Bron, Rhône, France), and R. Schmid (Pavia, Università, Pavia, Italy). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 340-351. 17 refs.

Unilateral vestibulo-ocular reflex (VOR) changes are investigated in cats exposed to vestibular and/or optokinetic training. The transfer of vestibular habituation aquired with one type of stimulation to oculomotor responses induced by another type are also examined. Results reconfirm the suggestion that habituation is due to a selective mechanism that modifies the gain and the dynamic characteristics of the VOR. Prolonged moving visual stimulation improves optokinetic responses by about 25 percent in cats, and produces static and dynamic VOR changes. The presence of a static VOR imbalance following optokinetic training as opposed to vestibular training, could account for the different degrees of retention of habituation. D.L.G.

**A82-17455 *** **Visually induced self-motion sensation adapts rapidly to left-right reversal of vision.** C. M. Oman and O. L. Bock (MIT, Cambridge, MA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 352-360. 24 refs. Grant No. NsG-2032; Contract No. NAS9-15343.

Three experiments were conducted using 15 adult volunteers with no overt oculomotor or vestibular disorders. In all experiments, left-right vision reversal was achieved using prism goggles, which permitted a binocular field of vision subtending approximately 45 deg horizontally and 28 deg vertically. In all experiments, circularvection (CV) was tested before and immediately after a period of exposure to reversed vision. After one to three hours of active movement while wearing vision-reversing goggles, 10 of 15 (stationary) human subjects viewing a moving stripe display experienced a self-rotation illusion in the same direction as seen stripe motion, rather than in the opposite (normal) direction, demonstrating that the central neural pathways that process visual self-rotation cues can undergo rapid adaptive modification. G.R.

**A82-17456** **Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics.** T. Mergner, L. Deecke, and W. Becker (Ulm, Universität, Ulm, West Germany). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 361-372. 16 refs. Deutsche Forschungsgemeinschaft Contract No. SFB-70.

The paper reports on neuronal responses recorded from the anterior suprasylvian cortex in cats subjected to labyrinthine, neck and combined stimulation in the horizontal plane. Preliminary results from human psychophysics are also reported, with emphasis on what naive humans report when subjected to the same stimuli as the animals. Processing includes whole-body rotation, isolated trunk rotation, and isolated head rotation. Subtraction provides a basis for the discrimination between whole-body and isolated head rotation, and addition may optimize the indication of movement and position of the head in space. Evidence is found that during whole body rotation and isolated trunk or head rotation, essentially the same processing of labyrinthine and neck afferent inputs take place in neurons of the cats' anterior suprasylvian cortex and in humans who try to distinguish the stimulus. D.L.G.

**A82-17457** **Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum.** R. Boyle and O. Pompeiano (Pisa, Università, Pisa, Italy). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) **A82-17458** **Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes.** B. W. Peterson, G. Bilotto, J. Goldberg, and V. J. Wilson (Rockefeller University, New York, NY). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 395-402. 15 refs. Grants No. NIH-EY-02249; No. NIH-EY-00100; No. NIH-NS-02619.

The properties of the vestibulocollic reflex (VCR) were studied with natural stimulation over an extended frequency range and compared with properties of the vestibulo-ocular reflex (VOR). The effect of medial longitudinal fasciculus (MLF) transection on the behavior of the reflex evoked by sinusoidal rotation at frequencies ranging from 0.5 to 4 Hz was also explored. An investigation was conducted regarding the dynamic properties of the cervicocollic reflex (CCR). The response was found to be very similar to the VCR response. This result suggests that the CCR can also be considered to be a second-order lag-lead system. Attention is also given to the interaction of vestibulocollic reflex and cervicocollic reflex. G.R.

**A82-17460** **Velocity storage, nystagmus, and visual-vestibular interactions in humans.** B. Cohen, T. Raphan, D. Dennett (New York, City University, New York, NY), and V. Henn (New York, City University, New York, NY; Zürich, Universität, Zurich, Switzerland). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 421-433. 32 refs. Grant No. NIH-NS-00294.

The purpose is to determine whether stored activity related to slow-phase eye velocity is present in humans and whether it contributes to visual-vestibular interactions. Data are presented demonstrating the following manifestations of stored activity related to slow-phase eye velocity: (1) optokinetic after-nystagmus (OKAN) is present after optokinetic stimulation; (2) postrotatory nystagmus velocity measured in darkness was reduced after rotation in light; (3) the velocity storage mechanism became partially charged by exposure to full-field motion for short periods of time; (4) it was discharged by exposure to a fixed visual field; and (5) various rates of field motion relative to the subject increased or decreased postrotatory nystagmus in a predictable fashion. C.R.

**A82-17461** **Aftereffects of vestibular and optokinetic stimulation and their interaction.** E. Koenig and J. Dichgans (Tübingen, Universität, Tübingen, West Germany). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 434-445. 21 refs.

The influence of prior vestibular stimulation and subsequent whole-field optokinetic stimulation, or the presentation of a stationary pattern on after-nystagmus (AN) was studied in humans. Pure vestibular and pure optokinetic stimuli were employed for comparison. The presentation of a stationary pattern resulted in suppression of vestibular nystagmus, which recovered after the termination of fixation. During combinations of vestibular and optokinetic stimuli, when the elicited vestibular (VN) and optokinetic nystagmus (OKN) had the same direction, there was a weak AN I toward the direction of the preceding VN and OKN, and a strong AN II toward the opposite side. AN was always stronger into the direction opposite to the previously elicited VN, indicating that the vestibular afference is the predominant input to the secondary vestibular integrator. D.L.G.

**A82-17462** **The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements.** M. C. Chubb and A. F. Fuchs (Washington, University, Seattle, WA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 446-454. 16 refs. Grants No. NIH-RR-00166; No. NIH-EY-00745; No. NIH-GM-00260.

The considered investigation makes use of a study of the relation of the neuronal activity to vertical eye movements and adequate vestibular stimulation. Three adolescent rhesus macaques (Macaca mulatta) were trained to track a small visual target while undergoing vertical sinusoidal angular acceleration. The tracking task made it possible to obtain various combinations of passive head rotation and eye movements. Recordings of neuron activity were made in all three monkeys, but electrical stimulation was applied to only one monkey. In the y-group and dentate nucleus region, most units exhibited increases in firing rate related to upward eye velocity during smooth pursuit and upward head velocity during suppression of the vestibulo-ocular reflex (VOR). G.R.

**A82-17463** **The brain-stem projection to the cerebellar flocculus relevant to optokinetic responses in cats.** T. Kawasaki, Y. Sato, K. Mizukoshi (Toyama Medical and Pharmaceutical University, Toyama, Japan), and I. Kato (Toyama Medical and Pharmaceutical University, Toyama; Yamagata University, Yamagata, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 455-464. 31 refs.

**A82-17464** **Visual mossy fiber inputs to the flocculus of the monkey.** H. Noda (California, University, Los Angeles, CA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 465-475. 16 refs. Grant No. NIH-R01-EY-01051.

A study was conducted regarding the characteristics of visual signals which are brought to the flocculus of the monkey. The study was based on 19 visually responsive mossy fiber units, which were selected from a total of 1,858 units recorded from the flocculus of seven monkeys (Macaca nemestrina). Among the 1,858 units, 116 units were identified as mossy fibers on the basis of the criteria used in a preceding study. The results of the study demonstrated clearly that the visual system is an important source of sensory input to the flocculus in the monkey. Mossy fibers showing responses to movements of a random-dot background were encountered in the white matter of the flocculus. Out of 116 mossy fiber units, 19 responded to movements of visual patterns. A common feature of the responses of visual mossy fiber units was directional selectivity. G.R.

**A82-17465** **Mossy fiber activation of the cerebellar flocculus from the visual system.** K. Maekawa, M. Kimura, and T. Takeda (Jichi Medical School, Tochigi, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 476-490. 40 refs. Ministry of Education of Japan Grants No. 311401; No. 57780; No. 377060.

A description is given of laboratory studies carried out to trace visual mossy fiber pathways in rabbits by means of electrophysiological and morphological (horseradish peroxidase) methods. It is shown that optic signals, after being transferred by neurons of the optic track nucleus, descend in the brain stem to activate the ipsi- and/or contralateral neurons of the nucleus reticularis tegmenti pointis (NRTP). The signals eventually reach the flocculus and bring about the mossy fiber activation of floccular Purkinje cells, which are known to project to the vestibular nuclei and to modify eye movements. The visual mossy fiber pathway through the NOT-NRTP to the flocculus contributes to optokinetic eye movements but not to a visually guided adaptive change of the vestibulo-ocular responses. C.R.

**A82-17466** **Input-output activity of the primate flocculus during visual-vestibular interaction.** W. Waespe, U. Büttner, and V. Henn (Zürich, Universität, Zurich, Switzerland). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 491-503. 23 refs. Swiss National Science Foundation Grant No. 3,343,2,70.

Cerebellar lesions in patients lead to deficits in pursuit eye movements, reduced optokinetic nystagmus, and the inability to suppress vestibular nystagmus by visual fixation. Lesions of the flocculus in primates lead to the same clinical syndrome. It is shown that floccular Purkinje cells modulate their activity to either enhance optokinetic nystagmus or suppress vestibular nystagmus during various paradigms of visual-vestibular interaction. The hypothesis is that the flocculus and the vestibular nuclei process visual-vestibular information in a complementary way: floccular Purkinje cells are modulated when vestibular nuclei activity is insufficient to move the eyes with adequate velocity, or when vestibular nuclei neurons still are modulated but nystagmus is suppressed. (Author)

**A82-17467** **Directional plasticity of the vestibulo-ocular reflex in the cat.** L. W. Schultheis and D. A. Robinson (Johns Hopkins University, Baltimore, MD). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 504-512. 23 refs. Grant No. NIH-EY-00598.

Eight, healthy, female cats were used in this investigation. Cross-axis nystagmus was found in every cat. It is concluded that it is a general phenomenon normally present in all members of the species. Since the cross-axis eye movements had the same latency as the vestibulo-ocular reflex, cross-axis plasticity probably represents a modification of the normal vestibulo-ocular wiring as a consequence of the system's ability for self-repair, rather than some learned following movement that can occur in the dark. Vestibulo-ocular plasticity across axes seemed to depend on the magnitude and direction of image slip on the retina during training. It is suggested that the cerebellum is an important component of the learning machine that enables modification of the direction as well as the gain of the reflex, although its exact mode of action remains unknown. G.R.

**A82-17468** **The 'Error' signals subserving adaptive gain control in the primate vestibulo-ocular reflex.** F. A. Miles and S. G. Lisberger (National Institutes of Health, National Institute of Mental Health, Bethesda, MD). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 513-525. 32 refs.

Substitutes for vestibular (head-velocity) signals are considered, taking into account experiments conducted on the monkey. It is concluded that, with respect to the monkey, eye movements per se are irrelevant so far as adaptive gain control of the vestibulo-ocular reflex (VOR) is concerned. The computation of VOR gain errors in the monkey appears to utilize some direct, internal measure of head velocity, with the vestibular signal itself presumably a prime candidate. In view of the obtained findings, it was expected that prolonged sinusoidal optokinetic stimulation would have no significant effect on VOR gain in the monkey, and this is borne out by experiment. Attention is given to substitutes for retinal slip signals, the primate flocculus, and VOR gain changes resulting from foveal pursuit tracking. A new hypothesis is presented regarding adaptive gain control in the primate VOR. G.R.

**A82-17469 *** **Active head rotations and eye-head coordination.** W. H. Zangemeister and L. Stark (California, University, Berkeley, CA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology,* *New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 540-559. 25 refs. Research supported by the Deutsche Forschungsgemeinschaft; Grant No. NCC2-86.

It is pointed out that head movements play an important role in gaze. The interaction between eye and head movements involves both their shared role in directing gaze and the compensatory vestibular ocular reflex. The dynamics of head trajectories are discussed, taking into account the use of parameterization to obtain the peak velocity, peak accelerations, the times of these extrema, and the duration of the movement. Attention is given to the main sequence, neck muscle EMG and details of the head-movement trajectory, types of head model accelerations, the latency of eye and head movement in coordinated gaze, gaze latency as a function of various factors, and coordinated gaze types. Clinical examples of gaze-plane analysis are considered along with the instantaneous change of compensatory eye movement (CEM) gain, and aspects of variability. G.R.

**A82-17470 Vestibular influence upon head-eye coordination.** G. R. Barnes and A. J. Prosser (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 560-570. 10 refs.

In the considered investigation an attempt was made to quantify the interaction of the nystagmus fast phase and the saccadic eye movement by instructing the subject to make voluntary head movements during the period of a postrotational vestibular stimulus. Eight subjects took part in the experiments. Subjects were rotated on a turntable for a period of 60 seconds. At the end of this period, rotation was stopped abruptly with the subject coming to rest facing in the direction of a center target light. During the ensuing period, in which a potent nystagmus was present, the subjects were exposed to one of two experimental conditions, including either target flash presentation or voluntary head rotation in the dark. The results of the investigation demonstrate that the presence of a concurrent stimulus to the vestibular system can significantly modify the temporal characteristics of head-eye coordination during voluntary head movements. G.R.

Bles (Amsterdam, Universiteit; Free University Hospital, Amsterdam, Netherlands). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 590-599. 11 refs.

**A82-17474 A hypothetical explanation for periodic alternating nystagmus - Instability in the optokinetic-vestibular system.** R. J. Leigh, D. A. Robinson, and D. S. Zee (Johns Hopkins University, Baltimore, MD). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 619-635. 40 refs. Grants No. NIH-EY-05264; No. NIH-AG-00061; No. NIH-EY-00598; No. NIH-EY-01849; No. NIH-NS-11071; No. NIH-EY-01765.

**A82-17475 Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys.** T. O-Uchi, M. Igarashi, and T. Kubo (Baylor University, Houston, TX). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 656-673. 51 refs. Research supported by the McFadden Charitable Trust Research Fund; Grants No. NIH-NS-10940; No. NIH-NS-07237.

A number of investigations appear to suggest the possibility that the frontal eye field (FEF) is involved in eye-head coordination. A study was conducted concerning the effect of FEF ablations on eye-head coordination during optokinetic and vestibular stimulation. Five healthy adult squirrel monkeys (Saimiri sciureus) weighing an average of 750 grams were used for this study. The obtained results suggest that the FEF was involved in spatial and/or temporal modulation of eye and head movements, but not involved in eye-head coordination under the present experimental conditions. G.R.

**A82-17476 Acoustic-induced eye movements.** K.-P. Schaefer, K.-J. Süss, and E. Fiebig (Göttingen, Universität, Göttingen, West Germany). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 674-688. 43 refs. Deutsche Forschungsgemeinschaft Contract No. SFB-33.

The influence of moving acoustic signals on oculomotor functions is investigated. Moving acoustic signals of varying frequency and form are applied, and visual-acoustic and vestibular-acoustic interactions are examined. Involuntary eye movements are observed in 20% of all test subjects, and are most pronounced in darkness when there is no fixation. Eye movements are influenced only slightly by a change in the amplitude of the sound movement from + or - 15 to 90 deg. Single burst signals at increasing repetition rates result in orienting reactions on the individual signals, while at high signal repetition rates above 0.5 Hz, continuous eye movements in the form of staircase jerks result. D.L.G.

**A82-17477 Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets.** R. Schmid, D. Zambarbieri, and G. Magenes (Pavia, Università, Pavia, Italy). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 689-705. 38 refs. Research supported by the Consiglio Nazionale delle Richerche.

The purpose is to further investigate the modifications of vestibular nystagmus produced by the presentation of nonvisual targets either stationary in space or moving with the subject. A quantitative-model interpretation of the experimental results provides useful suggestions on the respective roles of vestibulo-ocular reflex (VOR)-gain control and smooth-pursuit (SP) in adapting the vestibulo-ocular response to the actual oculomotor task. C.R.

**A82-17478 A physical model of human postural dynamics.** C. W. Stockwell, S. H. Koozekanani, and K. Barin (Ohio State University, Columbus, OH). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals*, vol. 374, Nov. 6, 1981, p. 722-730. 17 refs. Grant No. NIH-NS-13903.

A four-link model has been developed by adding a three-link model reported by Hemami and Jaswa (1978) to the triangular foot considered by Gurfinkel (1973). The model describes the human body in the sagittal plane with arms folded across the chest. It assumes that the body segments rotate about simple pin joints and that the spine is rigid. It further assumes that the left and right ankle joints rotate about the same axis and that the feet do not move. The body is modeled as a system composed of five homogeneous rigid segments. An investigation has been conducted to determine whether the model is adequate to describe human body sway or whether an even more complex model is required. The results thus far indicate that a four-degrees-of-freedom physical model of human postural sway is necessary and probably sufficient. The model is complex, but the governing equations are written in a form that makes evaluation feasible with a digital computer. G.R.

**A82-17479** **Dissociation of the eyes in saccadic movement.** T. Miyoshi, S. Hiwatashi, S. Kishimoto, and A. Tamada (Kyoto University, Kyoto, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 713-743. 13 refs.

It is found that in horizontal saccades, abduction and adduction are not conjugate. Abduction commences shortly before adduction and reaches the turning point shortly after adduction. The duration in binocular recording is significantly shorter than in monocular recordings. The abducting eye exhibits a tendency to move gradually on the new target. The adducting eye, however, has a tendency to overshoot. The characteristics of quick phases of horizontal optokinetic nystagmus, in which both eyes jump disconjugately to the new target, are found to be similar to those of horizontal saccades. The principal cause of this disparity may be a difference in neural mechanisms between abduction and adduction. It is noted that vertical saccades are not disconjugate. C.R.

**A82-17480** **Different effects involved in the interaction of saccades and the vestibulo-ocular reflex.** R. Jürgens, W. Becker, and P. Rieger (Ulm, Universität, Ulm, West Germany). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 744-754. 6 refs. Deutsche Forschungsgemeinschaft Contract No. SFB-70/U3.

It is thought that the mechanism responsible for the particular type of interaction that occurs between saccades and the vestibulo-ocular reflex (VOR) is related to the mechanism by which goal-directed saccades achieve their accuracy. To pursue this idea, the accuracy of goal-directed saccades during sinusoidal head rotation is investigated. It is demonstrated that saccades under such conditions have a better accuracy than expected on the basis of the results of Jurgens et al. (1981). The accuracy of human goal-directed saccades during passive sinusoidal whole-body rotation is found to be the same as that of normal saccades with the head still. There are two mechanisms contributing to this accuracy: (1) the incomplete summation (on the average, 70%) of saccade and VOR velocities; and (2) the lengthening of the duration of saccades during head rotation when VOR and saccade velocities have the same direction and the shortening of the duration when the directions are opposite. C.R.

**A82-17481** **Temporal bone characteristics in Meniere's disease.** J. Stahle, H. F. Wilbrand, and H. Rask-Andersen (University Hospital, Uppsala, Sweden). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 794-807. 27 refs. Research supported by the Statens Medicinska Forskningsrad. SMF Project 3908.

The diminished periaqueductal pneumatization of the petrous portion of the temporal bone in patients with Meniere's disease may affect the tomographic reproducibility of the aqueduct. Tomography may serve as a tool by providing a basis for the choice of surgical procedure. Histologic and Roentgenologic studies indicate that the pars rugosa of the endolymphatic sac in normals is housed inside the distal part of the vestibular aqueduct. In patients with Meniere's disease the sac might be located outside the aqueduct and therefore deprived of the functions of the loose and vascular tissue which normally surrounds it within the aqueduct, influencing the total vascular supply of the sac, and in turn interfering with its resorptive and immunodefensive functions. O.C.

**A82-17482** # **Microdisc gel electrophoresis in sodium dodecyl sulfate of organic material from rat otoconial complexes.** M. D. Ross, K. G. Pote, K. E. Rarey, and L. M. Verma (Michigan, University, Ann Arbor, MI). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 808-819. 25 refs. Grants No. NsG-9047; No. NIH-AG-00767.

The gravity receptors of all vertebrates utilize a 'test mass' consisting of a complex arrangement of mineral and organic substance that lies over the sensory receptor areas. In most vertebrates, the mineral is a polymorph of calcium carbonate in the form of minute, single crystals called otoconia. An investigation is conducted to determine the number of proteins in otoconial complexes and their molecular weights. The investigation makes use of a microdisk gel electrophoresis method reported by Gainer (1971). The most important finding of the reported research is that analysis of the proteins of the organic material of the otoconial complexes is possible when sensitive microanalytical methods are employed. Further modification of the basic technique employed and the inclusion of other sensitive staining methods should mean that, in the future, protein separation by molecular weight will be possible in sample pools containing only two otoconial masses. G.R.

**A82-17483** **The role of the plantar mechanoreceptor in equilibrium control.** I. Watanabe and J. Okubo (Tokyo Medical and Dental University, Tokyo, Japan). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 855-864. 19 refs.

A method for adding weight resistance to the plantar mechanoreceptors is described. The method is used in studying body-sway control mechanisms. Twenty subjects having no history of labyrinth disturbances or head injuries are used in the experiments. Of these, 16 are chosen for plantar-mechano-receptor stimulation. The order of use of the three plates is chosen at random. For purposes of comparison, 10 subjects are given a breath-holding test. It is thought that the stimulation of plantar mechanoreceptors under the experimental conditions produces its influence not only at the spinal level but is input to a higher level of the nervous system. C.R.

**A82-17484** **Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal.** J. H. Anderson (Minnesota, University, Minneapolis, MN). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 865-871. 27 refs. Research supported by the University of Minnesota and NATO; Grants No. NIH-R01-NS-16567; No. NIH-P50-NS-12125.

The response to stimulation of the otolith organs during static lateral tilt is studied. In the considered case, the response is a rotation of the eyes opposite to the head tilt and is assumed not to be influenced by the semicircular canals. The objective of the study is to compare the amount of ocular counterrolling in normal cats and in cats with lesions of the interstitial nucleus of Cajal (INC). Some evidence is to be obtained that might suggest whether or not the INC plays a role in the canal-otolith interactions vis-a-vis the vertical vestibulo-ocular reflex (VOR). The results from the animals with lesions of the interstitial nucleus of Cajal suggest that the INC can influence the torsional position of the eyes. G.R.

**A82-17568** **Evaluation of the parallel conductor theory for measuring human limb blood flow by electrical admittance plethysmography.** H. Shimazu, K.-I. Yamakoshi (Hokkaido University, Hokkaido, Japan), T. Togawa (Tokyo Medical and Dental University, Tokyo, Japan), M. Fukuoka, and H. Ito (Kyorin University, Tokyo, Japan). *IEEE Transactions on Biomedical Engineering,* vol. BME-29, Jan. 1982, p. 1-7. 21 refs. Research supported by the Ministry of Welfare of Japan.

**A82-17569** **Magnetic measurement of cardiac volume changes.** T. Katila, T. Tuomisto, T. Varpula (Helsinki University of Technology, Esbo, Finland), R. Maniewski (Polish Academy of Sciences, Institute of Biocybernetics and Biomedical Engineering, Warsaw, Poland), and P. Siltanen (Helsinki University, Central Hospital, Helsinki, Finland). *IEEE Transactions on Biomedical Engineering,* vol. BME-29, Jan. 1982, p. 16-25. 19 refs. Research supported by the Academy of Finland and Emil Aaltonen Foundation.

The spatial distribution of the magnetic susceptibility plethysmography (MSPG) signal across the chest of normal subjects is presented for magnetic measurements of cardiac volume changes. Ventricular ejection of blood is exhibited in signals measured above the heart, and on the upper and lower thorax. The temporal behavior of the MSPG is compared with results obtained from existing clinical methods, including magnetic induction plethsmography, and is shown to offer some advantages. The origin of the MSPG signal is theoretically analyzed, and when a fixed cardiac magnetic dipole model is used, overall change in cardiac volume as a function of time is evaluated with reasonable accuracy when the proximity effect of the torso is taken into account. D.L.G.

**A82-17570** **Dipole localization of average and single visual evoked potentials.** R. W. Sencaj and J. I. Aunon (Purdue University, West Lafayette, IN). *IEEE Transactions on Biomedical Engineering,* vol. BME-28, Jan. 1982, p. 26-33. 30 refs. Grant No. NIH-NS-15317.

A single dipole source was chosen as a model of the neurological generator of evoked potentials elicited by illuminated checkerboard stimulation of halves and quadrants of the visual field, and a homogeneous sphere was chosen as a model for the head. Dipole locations and moments were calculated for the average evoked potentials and average dipole locations and moments were calculated for the preprocessed single evoked potentials. The average dipole locations for the single potentials appear to be more anatomically appropriate than the location due to the average evoked potentials. A relationship was demonstrated between the dipole parameters and polarity inversions in the average evoked potentials. (Author)

**A82-17571** **Human vertical fusional response under open and closed loop stimulation to predictable and unpredictable disparity presentations.** A. L. Perlmutter and A. E. Kertesz (Northwestern University, Evanston, IL). *IEEE Transactions on Biomedical Engineering,* vol. BME-29, Jan. 1982, p. 57-61. 10 refs. Grant No. NIH-EY-1055.

**A82-17620** **The mass extinctions of the late Mesozoic.** D. A. Russell (National Museum of Natural Sciences, Ottawa, Canada). *Scientific American,* vol. 246, Jan. 1982, p. 58-65.

Geologic evidence for a celestial body impact with earth at the end of the Mesozoic period is examined. Dinosaur fossils are noted to be present in the strata of the immediately preceding, Cretaceous, period, and absent from the later Mesozoic period. A world-wide thin layer of iridium-enriched clay has been found in the Mesozoic layer, and iridium is noted to be present in greater abundances in meteorites than in the earth's crust. Both marine cores and continental samples of the same epoch have displayed the iridium anomaly, and it is estimated that 500 billion tons of matter were deposited on the earth in one instant. Possible extra-solar system origins of the material are discussed in the light of the iridium-isotope abundance ratio of the layer being the same as that of solar system materials. The sequence of species extinction is examined from the fossil record, and it is determined that no land animal weighing more than 55 lb survived the period in question. M.S.K.

**A82-17940** # **Human orientation in space.** L. R. Young (MIT, Cambridge, MA). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 20th, Orlando, FL, Jan. 11-14, 1982, Paper 82-0422.* 10 p. 7 refs.

The usefulness of platform motion in flight simulators and the problem of space motion sickness are discussed. Human spatial orientation is defined as a perception of linear position and angular orientation, as well as their rates of change. The semicircular canals in the vestibular system provide angular acceleration information, while the otoliths are the inertial balance organs, sensing acceleration in three dimensions. Minute accelerations, such as head turning, in a weightless environment, can give rise to a false sense of a gravity field. Simulator movement is asserted to involve a compromise between visual cues and vestibular perception, the latter being a significant indicator for experienced pilots; levels of motion sufficient to excite the semicircular canals are given as 0.2 deg/sec per sec, minimum. Research to define predictors, preflight habituation training, and in-flight prevention of space motion sickness is indicated, noting that current theory holds that a sensory conflict precipitates the onset of space motion sickness. (Author)

**A82-18024** **How do we avoid confounding the direction we are looking and the direction we are moving.** D. Regan and K. I. Beverley (Dalhousie University, Halifax, Canada). *Science,* vol. 215, Jan. 8, 1982, p. 194-196. 9 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada; Grant No. AF-AFOSR-78-3711.

Contrary to a previous assumption, the center of the expanding pattern of visual flow is not generally useful as an aid in judging the direction of self motion since its direction depends on the direction of gaze. For some visual environments, however, the point of maximum rate of change of magnification in the retinal image coincides with the direction of self motion, independently of the direction of gaze. This visual indicator could be used to judge the direction of self motion. (Author)

**A82-18325** **Effects of task feedback and stringency of external pacing on mental load and work performance.** J. L. Knight and G. Salvendy (Purdue University, West Lafayette, IN). *Ergonomics,* vol. 24, Oct. 1981, p. 757-764. 5 refs. NSF Grant No. APR-77-17695.

Sixteen subjects were used to study the effects of two levels of pacing constraint and four performance feedbacks on the performance and mental load associated with a manual task. The following main conclusions emerged: (1) performance feedback reduces the mental load of the task only when the pacing constraint is low and (2) feedback improves task performance when the pacing constraint is low since operators are able to meet work requirements more closely. Feedback, however, does not improve the performance or reduce the mental load of a highly paced task. (Author)

**A82-18523** † **Study of the discrimination capacity of the auditory analyzer in flight personnel (K izucheniiu razreshaiushchei sposobnosti slukhovogo analizatora u letnogo sostava).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal,* Nov. 1981, p. 44, 45. In Russian.

Thresholds for the perceptual masking of an auditory signal by noise and differential sensitivity to changes in the frequency and duration of a tonal stimulus are determined by the use of three prerecorded programs in flight personnel suffering from incipient bilateral cochlear neuritis, hypertonic neurocirculatory distonia, phase I hypertension emotional-autonomic instability, incipient bilateral cochlear neuritis in combination with emotional-autonomic instability and cerebro-vascular sclerosis. The differential frequency sensitivity threshold is found to be elevated in individuals with incipient cerebro-vascular sclerosis, hypertension and emotional-autonomic instability, while the incipient stages of cochlear neuritis do not worsen the noise stability or differential sensitivity of the auditory analyzer. The most informative indicator of the functional conditions of the auditory analyzer and central nervous system is found to be the differential sensitivity to tonal frequency changes, and it is recommended that assessment of this sensitivity by a method of constant stimulus differences be further developed for use in the clinical evaluation of air crew. M. Kurtser. In: Pathological physiology of certain extreme states (Patologicheskaia fiziologiia nekotorykh extremal'nykh sostoianii). Kishinev, Izdatel'stvo Shtiintsa, 1980, p. 73-78. 7 refs. In Russian.

Free amino acid compositions in the skeletal muscles and blood plasma at various stages of hypokinesia and readaptation to free motion are investigated in rats maintained in specially designed cells for periods of 10, 15 and 28 days. Analyses reveal a net decrease in total amino acid contents in the blood throughout the observational period, however an increase in skeletal muscle amino acid contents relative to initial levels by the 28th day of motion deprivation. The greatest decrease in amino acid contents in both organs is observed on the 15th day of the experiment. The results may be explained by the conversion of the plastic material represented by the free amino acids into energy substrates by the breakdown of proteins in the major organs in order to meet the increased energy requirements of the organism under stress. Kishinev, Izdatel'stvo Shtiintsa, 1980, p. 78-84. 9 refs. In Russian.

Measurements are presented of changes in the concentrations of free amino acids in the liver in response to visceral shock, strangulated intestinal blockage and hypokinesia. Visceral trauma induced by intestinal eventration in rats is found to lead to an elevation in liver total amino acid contents, although methionine + valine, cysteine and aspartic acid + serine levels fell. Upper strangulated intestinal blockage in dogs and hypoxia for up to 28 days in rats, on the other hand, are observed to lead to significant decreases in total free liver amino acid contents, and in individual amino acid contents with the exception of methionine + valine in both situations and phenylalanine, histidine and agrinine in hypokinesia. The elevation in total liver amino acid contents in visceral shock is attributed to a preponderance of catabolic processes over anabolic due to the greater stimulation of the sympathetic nervous system than the parasympathetic, while the decrease observed upon blockage is explained by intoxication effects and that caused by hypokinesia is related to liver atrophy and the use of amino acids as energy substrates. **A82-18684 *** **Estimating cell populations.** B. S. White and K. R. Castleman (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *Pattern Recognition,* vol. 13, no. 5, 1981, p. 365-370. Grant No. NIH-CB-70314; Contract No. NAS7-100.

An important step in the diagnosis of a cervical cytology specimen is estimating the proportions of the various cell types present. This is usually done with a cell classifier, the error rates of which can be expressed as a confusion matrix. We show how to use the confusion matrix to obtain an unbiased estimate of the desired proportions. We show that the mean square error of this estimate depends on a 'befuddlement matrix' derived from the confusion matrix, and how this, in turn, leads to a figure of merit for cell classifiers. Finally, we work out the two-class problem in detail and present examples to illustrate the theory. (Author)

I. Davlet'iants, S. M. Makeev, and A. A. Popov (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 52, 1981, p. 29-33. 9 refs. In Russian.

A functional model of the generation of the temporal and amplitude characteristics of the cardiac electric field is presented which may be used in the analysis of the structure of cardiac contractions during operator adaptation to various stresses. The model considers the electrical field of the contracting heart to be a superposition of the electric fields generated by the sources of the electro-cardiographic P wave, QRS complex and T wave, which are in turn stimulated by a single self-excited excitation pulse generator connected by delay lines to the respective sources. External loads are assumed to act on the temporal and amplitude characteristics of all components of the model. Possible applications of such a model include the identification of the degree of physiological stress and cardiovascular condition of aircraft system operators. A.L.W.

The interactions of cardiac and vascular mechanisms and increases in skeletal muscle tonus in the hemodynamic response to passive orthostatic testing are investigated by the use of a mathematical model of the circulatory system. The response of the model, in which hemodynamic regulation occurs in response to the mismatch between a set point and the outputs of aortic and carotid baroreceptors, to the changes in heart rate, cardiac inotropic coefficient, peripheral resistance, circulatory dead volume and venous tension in the lower half of the body, was calculated in the absence of cardiovascular regulation, in the presence of normal regulation, in the presence of regulation by only the cardiac component, in the presence of regulation by the vascular component alone, and by a limited variation in vascular tonus. Time variations of aortic pressure, aortic blood flow and central venous pressure indicate that while the cardiac component is insufficient to maintain hemodynamic parameters, it acts to minimize the magnitude and duration of hemodynamic disturbances, with the vascular component responsible for the virtual constancy of aortic pressure. Results also demonstrate the necessary contributions of extramural pressure in the leg and trunk muscles to the maintenance of aortic pressure.

**A82-18733** **Recent life change measurement in Canadian Forces pilots.** P. M. McCarron and N. H. Haakonson (Department of National Defence, Ottawa, Canada). *(Joint Committee on Aviation Pathology, Scientific Session, 12th, Halton, Bucks., England, Oct. 14-16, 1980.) Aviation, Space, and Environmental Medicine,* vol. 53, Jan. 1982, p. 6-13. 27 refs.

The development of a stress measurement data base to identify accident-prone aviators is reported. One group of 158 pilots and two control groups of nonaviators totalling 173 individuals answered questionnaires which referred to recent changes in health, work, family, social, and financial personal areas. The Life Change Units obtained were compared among personnel from different Canadian air bases and between pilots and nonpilots. It was determined that less than a 0.02 probability existed that the differences between the scores of the aviators and the nonpilots were due to chance. It is concluded that although further data are needed to equate the Life Change Units with specific levels of stress, the tests did indicate that pilots are in a high risk profession, and the sources are high enough to imply that over 50% of the pilots are subject to health changes.

Edelman (MIT, Cambridge, MA). *(Barany Society and New York Academy of Sciences, International Meeting on Vestibular and Oculomotor Physiology, New York, NY, Sept. 22-25, 1980.) New York Academy of Sciences, Annals,* vol. 374, Nov. 6, 1981, p. 80-92. 16 refs. Grant No. NsG-2032; Contract No. NAS9-15343.

Otolith function is studied by means of measurements of ocular torsion under various acceleration environments on earth and in weightlessness. Photographic measurements of ocular torsion as indicated by the rotation of landmarks on the iris with respect to head-fixed fiducial marks were obtained in subjects undergoing horizontal linear acceleration in a ground-based version of the space sled, lateral acceleration from weightlessness during pullout from the free-fall portion of parabolic flight, and optokinetic stimulation about the roll axis in the supine position in the laboratory and during weightlessness. The responses of ocular torsion to horizontal acceleration are in agreement with a simple low-order linear system with a dominant time constant of 0.33 sec, with a transfer function fit by a model with a pure delay of 0 to 400 msec and a first-order lag. In the pullout experiment, torsion was not observed in response to the onset of acceleration in the right-ear-down position, although it was present in response to the lateral stimulus. Results of the roll vection experiments indicate the independence of ocular torsion and visually induced tilt. In addition, an automatic video system using a soft contact lens target is presented which has been developed for ocular torsion measurements. A.L.W.

**A82-18736** **Check your oxygen.** K. E. Underwood Ground (RAF, Institute of Pathology and Tropical Medicine, Halton, Bucks., England). *(Joint Committee on Aviation Pathology, Scientific Session, 12th, Halton, Bucks., England, Oct. 14-16, 1980.) Aviation, Space, and Environmental Medicine*, vol. 53, Jan. 1982, p. 24-26.

The history of the crash of a Beechcraft Air 200 aircraft is dissected for causes. The pilot had radioed for permission for emergency descent, was acknowledged, the plane began a circular approach, and then communications broke off. The plane circled the airport 38 times and then crashed. Subsequent autopsy of the uncremated remains revealed a reported probable cause of death of hypoxia. The cabin was noted to have a 'dump atmosphere' switch, which may have been activated at 10,000 ft, while oxygen masks were set to deploy only above 12,500 ft. It was also found that the oxygen masks delivered only 47% oxygen concentration while in use. Recommendations are given for a total oxygen system check-out before each flight, including donning the oxygen masks to ensure that they deliver oxygen. M.S.K.

**A82-18737** **Forensic dentistry.** W. M. Morlang (USAF Hospital, New York, NY). *Aviation, Space, and Environmental Medicine*, vol. 53, Jan. 1982, p. 27-34. 20 refs.

The specialty of forensic dentistry is examined and its role in the multidisciplinary investigation of the identity of aircraft accident fatalities is addressed. State-of-the-art techniques are discussed including professional procedures and organization, radiology, documentation, and data automation. A unique procedure for courtroom presentation of identification confirmation dental radiographs is provided. The increased utilization of forensic dentistry within aviation pathology is encouraged. **A82-18738** **Piribedil-induced anti-hypoxic protection in rats.** C. Saligaut, N. Moore, M. Daoust, P. Chretien, and F. Boismare (Rouen, Université, Saint-Etienne-du-Rouvray, Seine-Maritime, France). *Aviation, Space, and Environmental Medicine*, vol. 53, Jan. 1982, p. 35-39. 16 refs.

The action of the dopaminergic agonist, piribedil, on a conditioned avoidance response was studied in normoxic or hypobaric hypoxic rats. This agonist has no effects in normoxia, but induces an anti-hypoxic protection (improvement of learning in hypoxia), antagonized by low doses of pimozide. The mechanism of the anti-hypoxic property seems to be mediated by the stimulation of the postsynaptic dopaminergic receptors, but does not exclude the role of noradrenergic pathways, as shown by the stabilization of norepinephrine levels during hypoxia after treatment with piribedil. (Author)

**A82-18739** **The effect of acetazolamide on the proteinuria of altitude.** A. R. Bradwell (Birmingham, University, Birmingham, England) and J. P. Delamere (Queen Elizabeth Medical Centre, Birmingham, England). *Aviation, Space, and Environmental Medicine*, vol. 53, Jan. 1982, p. 40-43. 11 refs. Research supported by the Arthur Thomson Trust Fund, West Midlands Regional Health Authority, and Lederle Pharmaceuticals.

Albumin was measured by dipstick tests and immunologically in 24-h and early morning urine samples collected from 20 subjects during a high-altitude trek. Each was given acetazolamide (Diamox sustets) or placebo as part of a double-blind trial on the prophylactic use of acetazolamide in acute mountain sickness (AMS). At the highest altitudes, albuminuria was six times greater in those on placebo and was related to the clinical features of AMS and arterial oxygen tension. Urine dipstick tests for proteinuria were also an index of AMS, but were inaccurate. The proteinuria is probably due to renal hypoxia, which causes increased glomerular permeability, reduced tubular readsorption, or both. The reduction in the clinical features of AMS achieved with acetazolamide therapy is also associated with improved renal function. (Author)

Ephrath (Bell Telephone Laboratories, Inc., Piscataway, NJ). *Aviation, Space, and Environmental Medicine*, vol. 53, Jan. 1982, p. 54-61. 21 refs. Grant No. NCC1-23.

This paper describes an experimental paradigm and a set of preliminary results which demonstrate a relationship between the level of performance on a skilled man-machine control task, the skill of the operator, the level of mental difficulty induced by an additional task imposed on the basic control task, and visual scanning performance. During a constant, simulated piloting task, visual scanning of instruments was found to vary as a function of the level of difficulty of a verbal loading task. The average dwell time of each fixation on the pilot's primary instrument increased as a function of the loading. The scanning behavior was also a function of the estimated skill level of the pilots, with novices being affected by the loading task much more than experts. The results suggest that visual scanning of instruments in a controlled task may be an indicator of both workload and skill. (Author)

It is noted that surgery is indicated in patients developing chronic documented frontal sinusitis despite medical therapy. Attention is called to the difficulty of treating flyers who do not develop chronic sinusitis but who have recurrent episodes of barotrauma-induced frontal sinusitis. It is thought that in some of these cases a ventilatory procedure is indicated. The recurrent history should first be well documented with X-rays showing the acute barosinusitis and convalescent X-rays showing interval clearing. Patients selected should not have other underlying or predisposing pathology, such as allergic or vasomotor rhinitis. The problem should be isolated to the frontal sinus and not be a component of pansinusitis. It is noted that unilateral involvement is preferable. Ventilation may then be obtained by combining naso-frontal reconstruction with intersinus septectomy. After the operation, an altitude-chamber flight is desirable before a return to flying. This could be accomplished after removing the rolled silastic sheeting. C.R.

(Contract DE-AC02-76EV-03264)
(DE81-029128; DOE/EV-03264/20) Avail: NTIS HC A03/MF A01

Four macrocytic anemias, five hemolytic anemias, nonhemolytic microcytic anemia, transitory siderocytic anemia, sex-linked iron-transport anemia, an alpha-thalassemia, and a new target-cell anemia were studied. Each of these blood dyscrasias is caused by the action of a unique mutant gene, which determines the structure of different intracellular molecules, and thus controls a different metabolic process. The potential for uncovering different aspects of hemopoietic homeostatic mechanisms in the mouse is considered. Each anemia is studied through: (1) characterization of peripheral blood values, (2) determinations of radiosensitivity under a variety of conditions, (3) measurements of iron metabolism and heme synthesis, (4) histological and biochemical study of bloodforming tissue, (5) functional tests of the stem cell component, (6) examination of responses to erythroid stimuli, and (7) transplantation of tissue between individuals of differently affected genotypes. (DE81-030824; BNL-30056; B10-3766; CONF-810873-2) Avail: NTIS HC A02/MF A01

The responses as survival, mutation, and carcinogenesis, of mammalian cells and tissues to radiation which are dependent not only on the magnitude of the damage to macromolecular structures (DNA, RNA, protein, and membranes) but on the rates of macromolecular syntheses of cells relative to the half lives of the damages are discussed. Cells possess a number of mechanisms for repairing damage to DNA. The effects of radiation and the repair of radiation damage can be explained by epidemiological data which allows the construction of dose response curves for humans. The shapes of such curves or the magnitude of the response depends on repair. Radiation damage is emphasized because: (1) radiation dosimetry is excellent compared to chemical dosimetry; (2) a number of cancer prone diseases show defects in DNA repair and radiation results in more chromosomal damage in cells from such individuals than in cells from normal individuals; (3) specific radiation products in DNA have been correlated with biological effects, and (4) many chemical effects seem to mimic radiation effects. It is indicated that damages to DNA can be the initiating events in carcinogenesis. DOE

The correlation between mutagenesis and carcinogenesis data on complex mixtures (synfuel materials) was determined. The heavy distillate is highly mutagenic compared with the other materials tested and it was also highly carcinogenic in a mouse skin painting assay. The fractions, we give different results from those of the mutagenesis assays. The basic tar and the neutral tar skin carcinogenesis data correlate fairly well with the mutagenesis data. The need for caution against depending heavily on equating PNA content with carcinogenic activity is emphasized. It is recommended that primary aromatic amines are also monitored. DOE

Marvin C. Waller, Randall L. Harris, Sr., and Lee H. Person, Jr. Dec. 1981 40 p refs
(NASA-TP-1936; L-14364) Avail: NTIS HC A03/MF A01 CSCL 05I

The differences in techniques used by seven pilots to acquire information from an advanced display for instrument approaches to and landings on a runway were investigated. A fixed base simulator programmed with dynamics resembling the terminal configured vehicle (TCV) was studied. It is shown that the seven pilots can be divided into two groups which used the display with distinctly different strategies for controlling the airplane. A related pattern of performance differences resulted. It is found that pilots who primarily use raw flight path information experience longitudinal oscillations while pilots using attitude information did not. E.A.K.

P. Krzesinski Mar. 1981 25 p refs In FRENCH
Avail: NTIS HC A02/MF A01

A technique for expressing automation problems, i.e., graph of command stage and transition (GraFcet), is presented. It is intended as a methodological tool which aids in the communication of automated systems specifications between client and contractor. The language GraFcet comprehends two levels of specification. The first level describes the behavior of the command part of a system in relation to the operating part (functional specifications). The second level sets technological and environmental specifications with which the command part of a system must operate (operational specifications). Fundamental notions and the practical use of GraFcet are explained. Author (ESA)

(NASA-TM-84080) Avail: NTIS HC A04/MF A01 CSCL 06C

Research in exobiology, life sciences technology, space biology, and space medicine and physiology, primarily using data gathered on the Salyut 6 orbital space station, is reported. Methods for predicting, diagnosing, and preventing the effects of weightlessness are discussed. Psychological factors are discussed. The effects of space flight on plants and animals are reported. Bioinstrumentation advances are noted. R.J.F.

The use of a bipolar donor-recipient model of medical technology transfer is presented. That methodology is designed to: (1) identify medical problems and aerospace technology that in combination constitute opportunities for successful medical products; (2) obtain the early participation of industry in the transfer process; and (3) obtain acceptance by the medical community of new medical products based on aerospace technology. Problem descriptions and activity reports and the results of a market study on the tissue freezing device are presented. E.A.K.

**STS-1 MEDICAL REPORT**
Sam L. Pool, ed., Philip C. Johnson, Jr., ed., and John A. Mason, ed. Dec. 1981 114 p

(NASA-TM-58240; S-509) Avail: NTIS HC A06/MF A01 CSCL 06P

The report includes a review of the health of the crew before, during and immediately after the first Shuttle orbital flight (April 12-14, 1981). Areas reviewed include: health evaluation, medical debriefing of crewmembers, health stabilization program, medical training, medical kit carried inflight; tests and countermeasures for space motion sickness, cardiovascular profile, biochemistry and endocrinology results; hematology and immunology analyses; medical microbiology; food and nutrition; potable water; shuttle toxicology; radiological health; cabin acoustical noise. Also included is information on: environmental effects of Shuttle launch and landing, medical information management; and management, planning and implementation of the medical program.

### EVALUATION OF CREW HEALTH

Craig L. Fischer and Joseph Degioanni *In its* STS-1 Med. Rept. Dec. 1981 p 5-6

Avail: NTIS HC A06/MF A01 CSCL 06P

The STS-1 pre- and postflight medical evaluations are presented. Exams included: audiometry; dental examination; laboratory microbiology; physical examination; cardiovascular stress tests, including 80% treadmill; stand test weight; tonometry; and visual examination. No significant clinical problem was identified postflight. Of interest medically was the expected hyperreflexia and dependent venous stasis exhibited by both crewmen. T.M.

**N82-15713*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### INFLIGHT OBSERVATIONS

Michael A. Berry *In its* STS-1 Med. Rept. Dec. 1981 p 7-9

Avail: NTIS HC A06/MF A01 CSCL 06P

The monitoring was carried out by recording electrocardiogram (ECG) during prelaunch, launch, early orbit time, entry, and landing; monitoring crew voice transmission throughout the mission; and conducting a daily private crew medical communication. Crew performance is outlined. No medical problems of any kind were experienced by the crew. No medical treatment inflight was required except for the prophylactic use of an antimotion sickness medication that had been planned preflight. T.M.

**N82-15714*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### CREW MEDICAL DEBRIEFING

Joseph Degioanni and Craig L. Fischer *In its* STS-1 Med. Rept. Dec. 1981 p 11-17

Avail: NTIS HC A06/MF A01 CSCL 06P

The postflight debriefings of the STS-1 astronauts are presented. The debriefings are presented as dialogues taken from the tape recording of the sessions. T.M.

**N82-15715*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### HEALTH STABILIZATION PROGRAM

James K. Ferguson *In its* STS-1 Med. Rept. Dec. 1981 p 19-21

Avail: NTIS HC A06/MF A01 CSCL 06E

The objective of the HSP is to provide an environment surrounding the prime and backup crewmen which will reduce or eliminate the exposure of the crew to infectious agents. The program limited the access of large numbers of newspersons to the crew and enabled the identification and medical examination of all VIP's who visited the crew. Although several primary contacts were observed not wearing masks at required times, the great majority of primary contacts did wear masks. The STS-1 program effectively kept 38 known ill persons out of crew work areas and thereby prevented crew exposure and possible illness. T.M.

**N82-15716*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### EMERGENCY MEDICAL SERVICES SYSTEM (EMSS)

Sam E. Pool *In its* STS-1 Med. Rept. Dec. 1981 p 23-27

Avail: NTIS HC A06/MF A01 CSCL 06E

The objective of the EMSS was to provide the ill or injured crewman with rapid access to the appropriate level of medical care. In order to meet the objective, the following factors were carefully considered in developing the EMSS for STS-1: accessibility to health care centers, personnel, training, experience, transportation, response times, communications, medical records, and special environmental hazards. The system is described along with flight surgeon staffing and deployment. T.M.

**N82-15717*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### CREW MEDICAL TRAINING

James M. Vanderploeg *In its* STS-1 Med. Rept. Dec. 1981 p 29-30

Avail: NTIS HC A06/MF A01 CSCL 06E

Each astronaut's initial training in the medical disciplines occurred during the first year following selection. The medical curriculum encompassed approximately 16 hours of instruction during the year. The principal areas covered include: the central and peripheral nervous systems; the auditory and vestibular systems; the visual system; dental health; the cardiovascular system; the pulmonary system, gastrointestinal system, and genitourinary system; and the musculoskeletal system. For each of these areas the astronauts were taught the basics of anatomy and physiology. In addition, they were introduced to physical examination techniques, diagnosis, and treatment of the more common ailments of the different organ systems. T.M.

**N82-15718*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### SHUTTLE ORBITAL MEDICAL SYSTEM

James M. Vanderploeg *In its* STS-1 Med. Rept. Dec. 1981 p 31-35

Avail: NTIS HC A06/MF A01 CSCL 06E

The system was designed to provide treatment for life threatening emergencies and to permit diagnosis and treatment of all less severe injuries and illnesses. It is intended to sustain the medical needs of a two man crew for up to 7 days. The system is described and a detailed list of the equipment in the emergency medical kit is presented. The prescribed medical training in the performance of emergency procedures, the use of diagnostic equipment, the performance of therapeutic modalities, and the knowledge of the medical kits contents is discussed. T.M.

**N82-15719*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### VALIDATION OF PREDICTIVE TESTS AND COUNTERMEASURES FOR SPACE MOTION SICKNESS

Jerry L. Homick *In* the STS-1 Med. Rept. Dec. 1981 p 37-38

Avail: NTIS HC A06/MF A01 CSCL 06E

Inflight observations, supported by a series of pre and postflight data collection procedures, on STS-1 crewmembers in an effort to validate ground based tests which may be predictive of susceptibility to the space motion sickness syndrome are presented. Crew procedures were implemented which enabled acquisition of data to be used in validating motion sickness countermeasures. T.M.

**N82-15720*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### CREW CARDIOVASCULAR PROFILE

Michael W. Bungo *In its* STS-1 Med. Rept. Dec. 1981 p 39-45

Avail: NTIS HC A06/MF A01 CSCL 06P

Cardiovascular data was acquired in the operational mode of the flight. Heart rate and blood pressure responses are presented for each crewman. There were definable points in the mission which produce cardiovascular stress as measured by heart rate response. The stand test in both the PLT and CDR show evidence for a relative hypovolemia and perhaps a resetting of arterial regulation. The anti-G suit and G sub z acceleration effects are discussed. The anti-G suit proved to be a rather simple yet relatively effective device for increasing tolerance to +G sub z acceleration. The STS-1 flight profile produced no operationally significant alterations in G tolerance. T.M.

**N82-15721*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

### BIOCHEMISTRY AND ENDOCRINOLOGY RESULTS

Carolyn S. Leach *In its* STS-1 Med. Rept. Dec. 1981 p 47-49

Avail: NTIS HC A06/MF A01 CSCL 06P

Blood (plasma or serum) biochemistry findings show postflight decreases below preflight findings for uric acid triglycerides, and AST. Postflight increases above preflight values were observed in glucose, cholesterol, BUN, calcium phosphate, angiotensin I, aldosterone, insulin, T3, T4, HGH, ACTH and GGTP. It is suggested that special attention should be given to the fluid and electrolyte intake in the astronauts so that homeostatic perturbations are not consequential. T.M.

**N82-15722*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**HEMATOLOGICAL AND IMMUNOLOGICAL ANALYSES**

Gerald R. Taylor *In its* STS-1 Med. Rept. Dec. 1981 p 51-52 refs

Avail: NTIS HC A06/MF A01 CSCL 06P

The analyses conducted on the cellular blood components of the primary and backup crewmembers indicated that for the one month period preceding the flight, there were no unusual variations in the cellular blood components of the crewmembers. However, there were alterations in both of the primary crewmembers after the flight. The explanation is that there was a phase decrease in fluid volume. Concomitant with this fluid imbalance there is also evidence to support an absolute decrease in mean erythrocyte volume, a peripherial lymphopenia, and a marked decrease in blastogenic response of lymphocytes to in vitro mitogenic challenge. T.M.

**N82-15723*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**MEDICAL MICROBIOLOGY OF CREWMEMBERS**

Duane L. Pierson *In its* STS-1 Med. Rept. Dec. 1981 p 53-58

Avail: NTIS HC A06/MF A01 CSCL 06E

A surveillance program consisting of microbial monitoring of the flight crews (prime and backup) and the spacecraft (including surfaces, food, air and water) is described. Samples were obtained from the crews and the Orbiter at specified times and were evaluated by quantitating the number of microorganisms and identifying the pathogenic and potentially pathogenic microbes. Quantitative values for total microorganisms per sample site were relatively low both pre- and postlaunch except for three sites which exhibited some microbial buildup during the flight. The circulating air in the Orbiter displayed a sharp increase in the number of airborne bacteria and fungi immediately prior to launch. T.M.

**N82-15724*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**FOOD AND NUTRITION**

Richard L. Sauer and Rita M. Rapp *In its* STS-1 Med. Rept. Dec. 1981 p 59-62

Avail: NTIS HC A06/MF A01 CSCL 06H

The menu used during STS-1 is shown in terms of food items and food forms (irradiated, freeze-dried, or beverage). The estimated mean daily inflight nutrient consumption per crewman is presented. Recommended quantities of specific nutrients are reported. T.M.

**N82-15725*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**THE POTABLE WATER**

Richard L. Sauer *In its* STS-1 Med. Rept. Dec. 1981 p 63-66

Avail: NTIS HC A06/MF A01 CSCL 06K

Periodic samples of the potable water were obtained preflight and a series of samples were taken postflight to determine the continuing microbiological and chemical quality of the water. Those parameters of nonmedical concern which were exceeded included total organics and color. Other parameters included nickel concentration, total bacteria count, and chromium concentration levels. T.M.

**N82-15726*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**SHUTTLE TOXICOLOGY**

Wayland J. Rippstein *In its* STS-1 Med. Rept. Dec. 1981 p 67-75

Avail: NTIS HC A06/MF A01 CSCL 06T

Space flight toxicity standards and methods for control and evaluation of candidate spacecraft materials selection and/or use are described. The development of methods and hardware for removal of spacecraft contaminants is discussed. The analytical chemical data obtained from the two Orbiter vehicles (OV-101 and OV-102) were reviewed. The Enterprise (OV-101) is shown to be an extremely clean vehicle, whereas the Columbia (OV-102) outgassed a significant number and quantity of contaminant gases. T.M.

**N82-15727*#** National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

**RADIOLOGICAL HEALTH**

Charles M. Barnes *In its* STS-1 Med. Rept. Dec. 1981 p 77-78

Avail: NTIS HC A06/MF A01 CSCL 06R

Dosimeters were provided for development within the crew compartment and on the astronauts flight garments to detect radiation encountered by the space crew during the mission. The STS-1 mission encountered geomagnetically trapped electrons and protons on 13 low altitude passes through the South Atlantic anomaly. The orbital inclination was such that encounters with the outer belt horn was negligible. Radiation dose to the crew from the above events was estimated to be 5 millirad. Total PDL measured dose to the crew from all sources during the STS-1 mission was 20 millirad. T.M.

**N82-15732#** Dornier-Werke G.m.b.H., Friedrichshafen (West Germany).

**FEASIBILITY STUDY (PHASE A) FOR A LIFE SCIENCE DOUBLE RACK ENVISAGED FOR THE SPACELAB MISSION D1 Final Report, Oct. 1980**

Rolf Baur, Karl-Ludwig Bitzer, Helmut Preiss, and Peter Schiller Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 83 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie (BMFT-FB-W-81-037; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17.40

The lifescience double rack which is envisaged for a flight in the Spacelab mission D1 enables the performance of biomedical and botanical experiments. Besides experiment specific boxes, the double rack contains multi-user facilities like a standard botanical equipment, an oscilloscope and two centrifuges, furthermore stowage containers for auxiliary equipment. For late access and early retrieval equipment, stowage lockers in the middeck are available and in addition middeck freezers can be used during flight. A concept for the life science double rack was worked out including the flight and ground operations and the ground support equipment. Author

**N82-15733#** Erno Raumfahrttechnik G.m.b.H., Bremen (West Germany).

**CONCEPT STUDY OF A LIFE SCIENCES PAYLOAD ELEMENT (PLE) FOR THE SL-D1 MISSION Final Report, Nov. 1980**

Peter Junk, Heinrich Stegen, Wolfgang Haebel, and Manfred Ott Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 184 p refs Partly in GERMAN and ENGLISH Sponsored by Bundesministerium fuer Forschung und Technologie (BMFT-FB-W-81-038; ISSN-0170-1339) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 34.70

Twelve life sciences experiments were selected as candidates for the Spacelab (SL)-D1 mission. They are combined to form a payload element (PLE). Experiment requirements were analyzed and completed, and technical concepts for the PLE were proposed. Interfaces were defined and missions assurance, operational, testing, and ground support aspects were considered. Most of the experiment requirements are within the capability which is supplied by the Space Transportation System, except the total stowage volume required for sample stowage in the orbiter mid deck. Also crew time is a critical parameter. The technical design concepts of the experiments are based on first Spacelab payload hardware or on existing commercial equipment, which has to be modified for SL. For realizing the SL-PLE, 32 months were estimated, starting from a definition phase. M.G.

**SPECTROPHOTOMETRIC STUDIES ON THE RNA STRUCTURE IN E.COLI RIBOSOMES. PART 1: FUNDAMENTALS**

**OF ULTRAVIOLET SPECTROPHOTOMETRY OF NUCLEI ACIDS**
M. Belli, F. Mazzei, and G. Onori (Perugia Univ., Italy) 20 Mar. 1980 35 p refs In ITALIAN; ENGLISH summary 2 Vol.
(ISS-R-80/2-Pt-1; ISSN-0390-6477) Avail: NTIS HC A03/MF A01

The fundamentals of UV absorption spectroscopy of nucleic acids are reviewed. The relationship between the absorption of a polymer (DNA, RNA) with the absorption properties of the bases, is described. The association between spectral changes and structural modifications in nucleic acids, is also evidentiated. M.G.

**N82-15735#** Istituto Superiore di Sanita, Rome (Italy). Lab. delle Radiazioni.

### SPECTROPHOTOMETRIC STUDIES OF THE RNA STRUCTURE IN E.COLI RIBOSOMES. PART 2: INFLUENCE OF IONS AND PROTEINS ON THE RNA SECONDARY STRUCTURE

A. Arcco, M. Belli, F. Mazzei (Perugia Univ.), and G. Onori 27 Mar. 1980 31 p refs In ITALIAN; ENGLISH summary 2 Vol.
(ISS-R-80/3-Pt-2; ISSN-0390-6477) Avail: NTIS HC A03/MF A01

The main results obtained on E.coli ribosomes and rRNA conformation are reviewed. It is shown in particular that the rRNA structure within the ribosome subunits can be affected by the interaction with proteins and with magnesium. M.G.

**N82-15736#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### FUNDAMENTALS OF AERONAUTICAL AND AEROSPACE MEDICAL SCIENCE

Cai Qiao, Feng Genquan, and Yan Yuanfu 17 Jul. 1981 956 p Transl. into ENGLISH of the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 344 p
(AD-A102298; FTD-ID(RS)T-1802-80) Avail: NTIS HC A99/MF A01 CSCL 06/5

The biological and physiological effects of flight environments were examined along with the types of environments themselves. The environments discussed are of three major types: the external environment, the cabin environment, and the internal environment of the body. Emphasis is placed on acceleration stresses and high gravity environments, flight safety and health, and the human body's reaction to the particular stresses discussed.

**N82-15737#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### THE DEVELOPMENTAL HISTORY OF AERONAUTICAL AND AEROSPACE MEDICAL SCIENCE

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 4-8 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Early research is emphasized. Several experiments in balloon flight and pressurized cabins are discussed. Problems arising from aeronautical development in World War 1 such as frostbite, hypoxia, decompression sickness, and flight fatigue are discussed. The influences of space navigational development on aerospace medicine are also discussed. The relationship between aircraft flight environment and spacecraft environment is considered. T.M.

**N82-15738#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### ENVIRONMENTAL CONDITIONS OF AVIATION AND SPACE NAVIGATION

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 9-24 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Three types of environments are discussed: the space environment, the inner cabin environment, and the environment in the human body. Atmospheric conditions encountered in aviation and space flight were reviewed. Medically related aircraft and spacecraft environmental conditions are summarized and include low pressure, lack of oxygen, decompression, explosive decompression, and oxygen poisoning. T.M.

**N82-15739#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### GENERAL LAWS OF AVIATION AND SPACE NAVIGATION ENVIRONMENTAL EFFECTS ON THE HUMAN BODY

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 25-34 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The effects of environmental conditions on the human body are brought about within various complex relations. The so-called action of a single condition is only the most outstanding manifestation in a certain dynamic process. The physiological changes and pathological process of the human body in space navigation as well as their reasons and reaction mechanisms were analyzed. The following factors are discussed: the qualities and composition of the environmental factors; the functioning state of the organism at the time; and man's subjective dynamic role. T.M.

**N82-15740#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### MEDICAL PROBLEMS OF GRAVITATIONAL CHANGES AND POWERED FLIGHT

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 35-37 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Three types of gravitational change are discussed: overweightness, angular acceleration, and noise produced by air vibration. Overweightness is considered as a large increase in the gravitational force such as impact. The vestibule-autonomic nervous system reactions and motion sickness caused by angular acceleration are covered. Aerodynamic noise tolerances are discussed. T.M.

**N82-15741#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### INJURY AND PROTECTION OF OVERWEIGHTNESS

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 38-129 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Physiological acceleration and acceleration stresses are summarized. Acceleration protection in high gravity environments is emphasized. The physics of angular acceleration and impact acceleration were reviewed. The physiological effects of high gravity are presented in detail along with pilot performance results due to such stresses. T.M.

**N82-15742#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### HARMFULNESS OF VIOLENT IMPACT AND AIRFLOW SHOCKS

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 131-162 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Various types of impact on the human body resulting from aircraft accidents or sudden deceleration are discussed. Special emphasis is given to parachuting or ejection from the aircraft and protective measures to be taken. L.F.M.

**N82-15743#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**HUMAN BODY REACTION TO VIBRATION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-08) 17 Jul. 1981 p 163 223 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Low frequency whole body vibrations sustained in aircraft and spacecraft are discussed. The physiological effects of such vibrations and protective measures to be taken are presented. L.F.M.

**N82-15744#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**THE EFFECTS OF ROTATION AND OSCILLATION: AERIAL SICKNESS**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 195-223 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Aerial sickness caused by aircraft and spacecraft motion is discussed. Various motion sickness drugs and other measures for combating this sickness are presented. L.F.M.

**N82-15745#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**FLIGHT ILLUSIONS**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 224-295 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Flight illusions encountered by aircraft pilots are discussed. Pilot selection and training techniques as well as other measures for preventing and overcoming these illusions are presented. L.F.M.

**N82-15746#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**MAN'S ADAPTATION TO WEIGHTLESSNESS AND LOW WEIGHT**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ED(RS)T-1802-80) 17 Jul. 1981 p 244-295 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Weightlessness and its effect on astronauts after long exposure to it are discussed. Its causes and various means to combat it are presented. L.F.M.

**N82-15747#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**NOISE AND SENSE OF HEARING**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 296-335 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Aircraft noise and its effect on pilots and others of the crew are discussed. Noise reduction techniques and steps to be taken to allow pilot efficiency in a noisy environment are presented. L.F.M.

**N82-15748#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**THE PHYSIOLOGICAL EFFECT OF LOW-AIR-PRESSURE ANOXIA**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 337-398 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Anoxia, a problem of the atmospheric environment in aerospace medicine, is discussed extensively. Discussion is limited to the physiological effects of anoxia caused by low air pressure. More specifically, the effects on the human respiratory, circulatory, nervous, and metabolic systems are detailed. M.D.K.

**N82-15749#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**CAISSON DISEASE**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 398-426 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The causal factors of Caisson Disease, a problem of the atmospheric environment in aerospace medicine, are discussed. Physiological effects of the disease on the human respiratory, circulatory, digestive, and skeletal systems are considered. Effects on body organs and tissues and attendant shock and fainting are also discussed. The physiological effects (mechanical and biochemical) of the formation of bubbles inside body tissues, the main cause of Caisson Disease, are detailed. Pressurization treatment and suggested procedures for adaptation and training as preventative measures are also discussed. M.D.K.

**DANGERS OF EXPLOSIVE DECOMPRESSION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 427-439 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Explosive decompression, drastic decompression at an ascent rate of over 1.5 km/sec, in space ships is either caused by structural damage or collision with a large meteor. The physiological effects of explosive decompression, a problem of the atmospheric environment in aerospace medicine, are discussed. Specific effects on the physiological tolerances of the human respiratory (bubble formation), digestive, nervous, and circulatory systems and attendant effects on body organs are considered. Suggestions for developing adaptation, training, and preventative methodology to handle explosive decompression are given. M.D.K.

**THE RELATIONSHIP OF BODY TEMPERATURE TO ENVIRONMENTAL TEMPERATURE**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 457-476 Transl.

into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The unresolved problem of fluctuations in environmental temperature in aeronautics and space travel and the attendant physiological effects on the human body are considered. Environmental temperature requirements, namely optimal and tolerable temperatures, the damage done to the human body by cold and heat, and its prevention are discussed. The human body's inherent mechanisms and their responses in regulating normal body temperature are also reviewed. M.D.K.

**N82-15753#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**COMFORTABLE TEMPERATURE AND TOLERABLE TEMPERATURE**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 477-506 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The range of temperature during flight which makes people feel comfortable was examined. During passenger flights or space travel, the cabin temperature is kept in a range comfortable for the crew and passengers. However, this comfortable temperature range cannot always be maintained. Flighters always have to sacrifice comfort for speed, any complicated temperature regulation facilities adds extra weight and volume to the plane, and slow it down. The comfortable temperature range required to maintain flying ability and operational efficiency is the acceptable temperature. The comfortable, tolerable and acceptable temperatures are discussed. E.A.K.

**THE PHYSIOLOGICAL EFFECT OF HEAT AND ITS PREVENTION**

*In its* Fundamentals of Aeron. and Aerospace Med Sci. (FTD-ID (RS)T-1802-80) 17 Jul. 1981 p 507-534 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The actual physiological effects of heat and preventive measures are discussed. The following issues are examined: (1) change of skin temperature and internal body temperature; (2) perspiration rate; (3) change of cardiovascular systems, respiration, and metabolism; (4) effects of heat; (5) sensitivity to temperature; (6) heat stroke; (7) heat adaptation; (8) heat damage prevention. E.A.K.

**N82-15755#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**THE EFFECT OF COLD AND THE COLD PREVENTION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 535-554 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The effects of cold, and cold prevention are described. Physiological responses to low temperatures are outlined: (1) physiological effects and damaged of cold; (2) local frostbites and injuries caused by cold; (3) effects of cold on flying ability; (4) factors affecting physiological responses to cold; (5) adaptation to cold; (6) clothing. E.A.K.

**N82-15756#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**IONIZING RADIATION AND ITS BIOLOGICAL EFFECTS**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 555-630 Transl. into ENGLISH from "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The biological effects of ionizing radiation are outlined. The following issues are discussed: (1) units of ionizing radiation; (2) radiation environments in space travel (solar cosmic radiation, terrestrial radiation zones); (3) radiation intensity during air and space travel (cosmic radiation in supersonic jets); (4) mechanism of radiation biological effects; (5) biological target theory; (6) radiation damage; (7) limitations of radiation safety. E.A.K.

**N82-15757#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**OTHER BIOLOGICAL EFFECTS OF RADIATION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 631-707 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The application of lasers in aerospace technology, its biological effects, and protective measures are discussed. The light simulated radiation has special characteristics of collimation and coherency, and its light pressure and destructive power is much greater than common light. Various types of lasers are solid gas, chemical, semiconductor and their light waves which have several thousand different wavelengths from ultraviolet to infrared. The use of laser technology in industrial health, and scientific research, and its use in military affairs and national defense is outlined. In the military, lasers have not only become effective measures in communications, aiming, reconnaissance, observations, night vision and navigation, but they can also be used directly as deadly weapons. E.A.K.

**N82-15758#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**VISUAL PROBLEMS IN AVIATION AND SPACE NAVIGATION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) p 708-739 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Visual problems encountered on aerospace navigation are discussed. Vision depends on the stimulation of visible light for realization and visible light is a type of electromagnetic radiation. The wavelength of visible light is 3,800-7,500 angstrom and photon energy lies in the range of 3.1-16.5 electron volts. After entering a high altitude or outer space, many differences occur between the visual environment and the Earth's surface, presenting aerospace medical science with many special problems concerning vision. E.A.K.

**SPACE NAVIGATION LIFE GUARANTEES**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 740-822 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Requirements for and the provision of a normal living environment and the necessary supplies of food, water, gases, and hygenic and medical safequards during space flight are discussed. The human metabolism is reviewed. Food supply and preparation methods, oxygen supply and methods of handling waste gases, the water supply and water regeneration, closed life support systems and subsystems and environmental sanitation are described. Space suit and helmet design are considered. Medical treatment and first aid, the medical experiences of the Apollo astronauts, and emergency requirements for forced landing on Earth in desert, ocean, and polar regions and the basic survival kit are discussed. The biological clock and diurnal rhythm are considered. J.D.H.

**N82-15760#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

**CABIN POLLUTION**

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 822-873 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

Possible pollutants existing in closed aircraft and spacecraft cabins and methods for the handling and disposal of these pollutants are described. Pollutants from fuel, waste gases, and rubber articles are considered. Excretions from the human body including gases, perspiration, feces, urine, and gastrointestinal tract gases are also sources of pollution. Pollutants originating from high altitudes and outer space, such as high altitude ozone and cosmic space radiation, are considered. J.D.H.

**N82-15761#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### AVIATION MEDICAL GUARANTEES

*In its* Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 874-889 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry publishers, Jun. 1979

Avail: NTIS HC A99/MF A01 CSCL 06/5

The medical requirements for pilots and air crew and how to guarantee their safety, work capabilities, and physical health in the air are discussed. The various characteristics of flight work are described. Psychological and physical preparation of air crews for flight stress are considered. J.D.H.

**N82-15762#** Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

### SPACE NAVIGATION MEDICAL GUARANTEES AND MEDICAL SUPERVISION

**REMOTE MEDICAL DIAGNOSIS SYSTEM (RMDS) UTILIZATION STUDY** Technical Progress Report, Dec. 1980 - May 1981

I. Stevens and C. Zekan (WESTEC Services, Inc.) 18 Aug. 1981 44 p refs
(Contract N00123-81-D-0353)
(AD-A105559; NOSC-TR-700) Avail: NTIS HC A03/MF A01 CSCL 06/5

Remote medical diagnosis systems are being successfully utilized for consultation in rural health care programs and private radiology practices. Consultation over RMDS-type systems reduces medical referrals and evaluations and assists in making triage decisions with a greater degree of confidence. RMDS-type systems can be used effectively for teleradiology consultations. The utilization of RMDS on ships and at remote shore sites has the potential for improved diagnoses. Nonphysician health care providers are more inclined to use telemedicine than physicians. GRA

Louis S. Osborne and B. Leonard Holman Aug. 1981 16 p Prepared in cooperation with Harvard Medical School
(Contract DE-AS02-78EV-04969)
(DE81-027995; DOE/EV-04969/3) Avail: NTIS HC A02/MF A01

Myocardial perfusion scintigraphy performed after the injection of a potassium analogue during exercise to detect transiently ischemic myocardium due to coronary artery disease was examined. The limitation in the implementation of the technique for the screening of patients with coronary artery disease is the lack of a high resolution, positron detecting system. The positron multiwire proportional counter solves this problem. The dispersion of the absorbing material is achieved by stringing wires of high Z material, such as tungsten, in a cross pattern. The wire layers are at graded voltages, the ionization from the photoelectrons is drifted through the stack and picked up by sense wires operating in the proportional mode. Positron annihilation detectors are self collimating. The acquisition of events over a multiplicity of angles allows 3 dimensional reconstruction. The combination of large solid angle, high efficiency and a short source half life minimizes radiation dose to the patient. DOE

**PROBLEMS IN EVALUATING HEALTH EFFECTS OF OCCUPATIONAL AND ENVIRONMENTAL EXPOSURES**

Ethel S. Gilbert 1981 23 p refs Presented at the Conf. on Statistical and Epidemiological Methods in Ionizing Radiation, Berkeley Springs, W. Va., 6-10 Jul. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028440; PNL-SA-9632; CONF-810755-1) Avail: NTIS HC A02/MF A01

The problems involved in analyzing and interpreting radiation exposure data are addressed. Existing standards for exposure are based primarily on estimates of health effects obtained by extrapolation from effects of high level exposures. Occupational and environmental exposures provide one source of data. Populations exposed in this manner were studied. Because of the size of most of the groups and the magnitude of the exposures received the amount that can be learned from such populations is severely limited. Many of these problems are illustrated by study of the effects on mortality of occupational exposure to radiation at the Hanford plant. DOE

**NON-INVASIVE PULMONARY ARTERIAL PRESSURE MEASUREMENT** Final Report, 1 Jun. 1976 - 30 Nov. 1980

John T. Reeves 8 Jun. 1981 124 p
(Contract NO1-HR-6-2920)
(PB81-239410; NIH-NO1-HR-62920-1F) Avail: NTIS HC A06/MF A01 CSCL 06P

Pulmonary arterial pressure by noninvasive means based on measurement of hemodynamic variables, particularly pulse wave velocity, instantaneous blood flow and pulmonary arterial diameter was measured. An esophageal approach showed good pulmonary arterial flow patterns from the esophagus. A dual range gated Doppler from the front obtained Doppler flow pulses in the main pulmonary artery. A body plethysmographic technique recorded flow at the most distal part of the pulmonary vascular bed, the microcirculation. In humans undergoing right heart catheterization, pulse wave velocity was an excellent correlation of pressure in the low range. It is suggested that the scator at higher pressures is due to variations in artery diameter and wall stiffness. It is concluded that a hemodynamic approach is feasible using known techniques if the problem of measuring pulse wave velocity can be solved. GRA

**N82-15777#** National Bureau of Standards, Washington, D.C. National Engineering Lab.

**A HEAT TRANSFER ANALYSIS OF SCALD INJURY** Final Report

Robert L. Palla, Jr. Jul. 1981 69 p refs
(PB81-238503; NBSIR-81-2320) Avail: NTIS HC A04/MF A01 CSCL 06E

Numerical solutions for skin tissues temperature during scald injury events are obtained and utilized in conjunction with a thermal injury criterion, to predict critical exposure levels for various heated fluids. A one dimensional tissue model of the type used by Love is employed to determine the initial tissue temperature distribution. The bio-heat equation for tissue heat transfer is then solved via an implicit finite difference technique, subject to convective heating and cooling at the surface. The sensitivity of the critical exposure level to variation in tissue properties and convective heating coefficients is investigated. Thermal injury thresholds are presented for various fluids along with bounds to reflect uncertainty in assumed tissue properties. The results obtained are in good agreement with existing experimental scald injury data. GRA

**METHODS FOR LINKING ITEM PARAMETERS Final Report**
C. David Vale, Vincent A. Maurelli, Kathleen A. Gialluca, David J. Weiss, and Malcolm James Ree Brooks AFB, Tex. AFHRL Aug. 1981 190 p refs
(Contract F33615-80-C-0008)
(AD-A105509; AFHRL-TR-81-10) Avail: NTIS HC A09/MF A01 CSCL 05/9

A simulation study to determine appropriate linking methods for adaptive testing items was designed. Responses of examinees of three group sizes for four test lengths were simulated. Three basic data sets were created: (a) randomly sampled data set, (b) systematically sampled data set, and (c) selected data set. Three categories of evaluative criteria were used: fidelity of parameter estimation, asymptotic ability estimates, root-mean-square error of estimates, and the correlation between true and estimated ability. Test length appeared to be relatively more important to calibration effectiveness than was sample size, efficiency analyses suggested that increases in test length were at least three to four times as effective in improving calibration efficiency as proportionate increases in calibration sample sizes. The asymptotic ability analyses suggested that the linking procedures based on Bayesian ability estimation (an equivalent-groups procedure) were somewhat more effective than the others and that the equivalent-tests method was typically no better than not linking at all. Analyses using the relative efficiency criteria suggested that the equivalent-groups procedures were superior to the equivalent-tests procedures and that those using Bayesian scoring procedures were slightly superior to the others tested. Efficiency loss due to linking error was always less than that due to item calibration error and although test length and sample size had a definite effect on calibration efficiency, no strong effects appear with respect to linking efficiency. For the systematically sampled data set, the anchor-test and anchor-group methods were considered along with the equivalence methods. GRA

**PREPROTOTYPE NITROGEN SUPPLY SUBSYSTEM DEVELOPMENT Interim Report, Jun. 1981**
D. B. Heppner, T. M. Hallick, and F. H. Schubert Jun. 1981 50 p refs
(Contract NAS2-10673)
(NASA-CR-166192; LSI-TR-410-4) Avail: NTIS HC A03/MF A01 CSCL 06K

A nitrogen supply subsystem based on the dissociation of hydrazine into a mixture of hydrogen and nitrogen is developed. The latter is separated to provide makeup nitrogen to control the composition of spacecraft atmospheres. Specific hardware developments resulted in the design and fabrication of a nominal 3.6 kg/d nitrogen generation module. The design integrates a hydrazine catalytic dissociator, three ammonia dissociation stages and four hydrogen separation stages into a 33 kg, 14 cu dm module. A technique was devised to alternate the ammonia dissociation and hydrogen separation stages to give high nitrogen purity in the end product stream. Tests show the product stream to contain less than 0.5 percent hydrogen and 10 parts per million ammonia. The design and development of a test stand for the nitrogen generation module and a series of tests which verified its operation and performance capability are described. S.L.

**A CRITERION FOR THE DISPOSAL OF M58 SLEEPING BAGS**
W. A. Lotens and E. J. M. Smienk 1979 23 p refs In DUTCH; ENGLISH summary
(Contract A77/KL/156)
(IZF-1979-15; TDCK-73398) Avail: NTIS HC A02/MF A01

In order to separate sufficiently insulating from non-sufficiently insulating sleeping bags, a convenient criterion was developed. Physical measurements showed that the thickness of the material under a pressure of 15 N/sq m gives a good correlation with insulating power. By means of a heat conduction model of a man in a bag (based on experiments with subjects) a relation between minimum tolerable outside temperature and thickness of the bag was established. It turns out that with optimal use of all personal equipment a new sleeping bag (26 mm thickness) will fail to keep a man warm in 3% of the man-nights and an old one (12 mm thickness) in 6%. It is recommended to dispose of bags with a thickness less than 20 mm. This result, however, is highly dependent on the insulative suit that is worn. M.G.

**HEARING PROTECTION**
G. F. Smoorenburg, A. M. Mimpen, and H. A. vanLeeuwen 1980 17 p refs In DUTCH; ENGLISH summary
(Contract A76/K/104)
(IZF-1980-2; TDCK-73415) Avail: NTIS HC A02/MF A01

The acoustic attenuation of 20 types of ear plugs and 20 types of ear muffs was surveyed. Important design aspects, the maximum attenuation possible closing the ear canal, the attenuation of plug plus muff, and measuring methods are discussed. To determine the attenuation for practical purposes, differences in hearing protector fitting, temporary removal of protectors, and the noise spectrum must be considered. The effect of wearing hearing protectors on speech intelligibility is discussed. Speech intelligibility does not decrease for people with normal hearing exposed to steady state noise but it may decrease in relatively silent periods of fluctuating or intermittent noise and for all noises if one has a perceptive hearing loss. **EVALUATION OF CHEMICAL PROTECTIVE FACELETS AND COMPARISON OF FOUR PROTOTPYES**
W. A. Lotens 1980 21 p In DUTCH; ENGLISH summary
(Contract A79/KL/111)
(IZF-1980-15; TDCK-75013) Avail: NTIS HC A02/MF A01

In a controlled field experiment four prototypes of chemical protective facelets were tested to determine the effect on physical and mental performance, and the chemical protection and ergonomic properties. Wearing facelets decreases the physical performance on running 400 m resp. 3 km by 3.5 resp. 7.5 percent. When worn during 24 hr. physical performace is variable and mental performance decreases by ca. 10 percent. There is no indication for adaptation within a one-week period. Chemical protection is sufficient for all four types after a while of wearing, however, one of four is highly sensitive for rain. Ergonomic tests show only slight differences between the facelets but there is a marked difference in comfort. Because of this the subjects preferred two types above the other two. Protection during sleep is far from optimal. Author

**THE LINK-MILES DRIVER TRAINING SIMULATOR FOR**

**TRACKED VEHICLES: INFLUENCE OF CABIN MOTION ON GEAR-CHANGE LEARNING**
K. J. Foll 1980 15 p refs In DUTCH; ENGLISH summary
(Contract A76/KL/148)
(IZF-1980-24; TDCK-75017) Avail: NTIS HC A02/MF A01

The influence of the moving base from the Leopard driving simulator on gear-change learning was studied. Twelve trainees were trained with motion and twelve others without motion. All trainees were constantly accompanied by the instructor and after the training on the simulator, all trained on the tank. No differences between both groups were found in learning time on the simulator and in learning time on the tank. This means that the information, given by the motion, can be replaced by good instruction.

**SIMULATOR DATA ON HUMAN ERROR PROBABILITIES**
E. J. Kozinsky (General Physics Corp.) and H. E. Guttmann 1981 7 p refs Presented at the ANS/ENS Topical Meeting on Probabilistic Risk Assessment, Port Chester, N.Y., 20 Sep. 1981
(Contract DE-AC04-76DP-00789)
(DE81-026094; SAND-81-1707C; CONF-810905-4) Avail: NTIS HC A02/MF A01

Analysis of operator errors on NPP simulators was used to determine human error probabilities (HEP). Simulator data tapes are analyzed for operator error rates. The tapes collected, using performance measurement system software, contain a history of all operator manipulations during simulated casualties. Analysis yields a time history or operational sequence diagram and a manipulation summary, both stored in computer data files. Data searches yield information on operator errors of omission and commission. This work experimentally determined HEP's for probabilistic risk assessment calculations.

**USE OF A TELEVISION MULTIPOINT x-y TRACKER FOR DETERMINING THE TRANSMISSION OF VIBRATIONS ON HUMAN BEINGS [UEBER DIE ANWENDUNG EINES 'TV-MULTIPOINT x-y TRACKERS' ZUR BESTIMMUNG DER SCHWINGUNGSUEBERTRAGUNG AUF DEN MENSCHEN]**
L. Vogt and E. Schwartz 1980 10 p In GERMAN
Avail: NTIS HC A02/MF A01

A television multipoint x-y tracker was used to study the influence of mechanical vibrations on the human body, in a project on human factors in man machine systems. A mechanical model of a human being seated on a shaker was employed on which the mechanical impedance and the vibration transmission (transmissibility) were investigated as a function of vibration frequency. The multipoint x-y tracker provides contactless registration of the motions of the head. The system is based on a television camera, and allows the simultaneous and continuous registration of the x and y coordinates of three points of a moving object.

**EVALUATION OF AIR CLEANING AND MONITORING EQUIPMENT USED IN RECIRCULATION SYSTEMS**
Mark L. Holcomb and Robert C. Scholz Apr. 1981 200 p refs
(Contract PHS-NIOSH-210-78-0011)
(PB81-242695; DHHS/PUB/NIOSH-81-113) Avail: NTIS HC A01; SOD HC CSCL 06J

Several pilot scale air cleaners and monitors were evaluated to determine their performance characteristics, maintenance requirements, and reliability for use in a recirculating exhaust system. A set of evaluation criteria for recirculation system components were developed. Then, selected system components (including an electrostatically augmented fabric filter, electrostatic precipitator, aspirated cartridge filter, four different extractive type particulate air monitors, three different extractive ozone monitors and a safety monitoring filter were installed and tested on a welding process exhaust. The results indicate that many factors must be evaluated before a decision can be reached concerning the use of a particular device. Additionally, components of a complete recirculation monitoring system were identified and the need for the development of commercial devices incorporating all of these components was evidenced by the fact that each of the commercially available devices tested lacked one or more of these components.

**AN EVALUATION OF ENGINEERING CONTROL TECHNOLOGY FOR SPRAY PAINTING**
Dennis M. OBrien and Donald E. Hurley Jun. 1981 185 p refs
(PB81-243123; DHHS/PUB/NIOSH-81-121) Avail: NTIS MF A01; HC SOD CSCL 06J

Field surveys of 11 finishing operations provided information for an evaluation of control technology for spray painting and coating processes. Studies were conducted in the automobile refinishing, wood and metal furniture, transportation equipment (nonautomotive), heavy machinery, and appliance finishing industries. Processes selected provide representative coverage of spray finishing operations relative to the number of exposed workers, different control techniques, physical size of the workpiece, and the coating systems that are typically used. Control of selected health hazards is discussed; available control options evaluated. Case study summaries include analysis of: hazards, engineering controls and work practices, ventilation measurements, air sampling data and personal protective equipment. Results should be usable as a reference source.

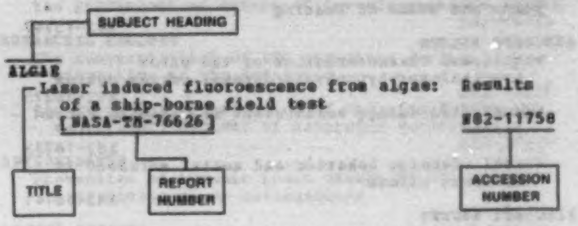
# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY**/*A Continuing Bibliography (Suppl. 231)* **APRIL 1982**

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A82-16954

Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797
Ionizing radiation and its biological effects
N82-15756

Other biological effects of radiation
N82-15757

BIOLOGICAL EVOLUTION
Organic compounds in space and the problem of the origin of life A82-17362

BIOLOGICAL MODELS (MATHEMATICS)
Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object A82-16807
A modified kinetic model of muscular contraction A82-16818
Analysis of retinal work in the discrimination of a contour signal A82-16819
Model for the perception of moving and fixed objects A82-16820
A physical model of human postural dynamics A82-17478
Functional model of the temporal and amplitude characteristics of the cardiac electric field A82-10699
Problems of the regulation of hemodynamics during a passive orthostatic test - Study of a mathematical model A82-10700

BIOMEDICAL DATA
U.S. manned space flight: The first twenty years - A biomedical status report A82-16927
Monitoring the condition of the organism under hyperoxic conditions A82-17141
NASA biomedical applications team. Applications of aerospace technology in biology and medicine [NASA-CR-152663] N82-15710
STS-1 medical report [NASA-TM-58240] N82-15711
NASA biomedical Applications Team Advisory Center for Medical Technology and Systems [NASA-CR-166755] N82-15770

BIOMETRICS
Inflight observations N82-15713

BIONICS
Robot with sense of touch A82-17133

BIOSATELLITES
Summary of experiments onboard Soviet biosatellites A82-16929
Future investigations onboard Soviet biosatellites of the Cosmos series A82-16954

BIOSYNTHESIS
Effects of the diet on brain function A82-16942

BIOTELEMETRY
Experience with the development and application of telemetric computing systems in cardiology A82-16806

BIRDS
Organization of the avian accessory optic system A82-17445

BLACKOUT PREVENTION
Man's adaptation to weightlessness and low weight N82-15746

BLOOD
Changes in blood indicators upon the inclusion of trace elements in the diet A82-16274
The state of the air-blood barrier in hyperoxia A82-16970

BLOOD FLOW
Evaluation of the parallel conductor theory for measuring human limb blood flow by electrical admittance plethysmography A82-17568

BLOOD PLASMA
Changes in Hageman factor system indicators during human adaptation to intense physical loading A82-16816
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes A82-17145
Plasma erythropoietins during training for hyperoxic conditions A82-17147
The effects of hypokinesia on the spectral characteristics of free amino acids in the skeletal muscles and the blood A82-10661
Biochemistry and endocrinology results N82-15721

BLOOD PRESSURE
Cardiovascular reflexes during rest and exercise modified by gravitational stresses A82-16932
Crew cardiovascular profile N82-15720
Non-invasive pulmonary arterial pressure measurement [PB81-239410] N82-15776

BLOOD VOLUME
Magnetic measurement of cardiac volume changes A82-17569
Hematological and immunological analyses N82-15722

BODY FLUIDS
Current views and future programs in cardiovascular physiology in space A82-16931

BODY SWAY TEST
A physical model of human postural dynamics A82-17478
The role of the plantar mechanoreceptor in equilibrium control A82-17483
Use of a television multipoint x-y tracker for determining the transmission of vibrations on human beings --- human factors in man machine systems N82-15787

BODY TEMPERATURE
The relationship of body temperature to environmental temperature N82-15752
Comfortable temperature and tolerable temperature N82-15753
The physiological effect of heat and its prevention N82-15754
The effect of cold and the cold prevention N82-15755

BODY WEIGHT
How important are changes in body weight for mass perception A82-16944
The role of the plantar mechanoreceptor in equilibrium control A82-17483

BONE DEMINERALIZATION
Bone effects of space flight - Analysis by quantum concept of bone remodelling A82-16947

BONES
The effects of hypokinesia in primates and bone strength A82-16946
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement [ASLE PREPRINT 81-LC-2D-1] A82-10402

BRAIN
Effects of the diet on brain function A82-16942

BRAIN CIRCULATION
The functional state of some subcortical cerebral structures during adaptation and deadaptation to physical loading A82-16823

BRAIN DAMAGE
The differential diagnosis of an asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions A82-16813
Input-output activity of the primate flocculus during visual-vestibular interaction A82-17466
Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys A82-17475

BRAIN STEM
Cat medial pontine neurons in vestibular nystagmus A82-17443

BURNS (INJURIES)
A heat transfer analysis of scald injury [PB81-238503] N82-15777

C

CABIN ATMOSPHERES
Environmental conditions of aviation and space navigation N82-15730
CARBON MONOXIDE POISONING
Evaluation of short-term bioassays to predict functional impairment. development of pulmonary bioassays in small animals: Directory of Institutions; individuals involved in utilization [AD-A103767] N82-14798
CARCINOGENS
Repair of radiation damage in mammalian cells [DE81-030824] N82-14800
Carcinogenic effects of coal-conversion materials [DE81-028108] N82-14803
CARDIOGRAMS
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests A82-16167
CARDIOLOGY
The ergometric determination of myocardial reserves A82-16805
Experience with the development and application of telemetric computing systems in cardiology A82-16806
The role of physical training in the prevention of ischemic heart disease A82-18525
CARDIOVASCULAR SYSTEM
Current views and future programs in cardiovascular physiology in space A82-16931
Cardiovascular reflexes during rest and exercise modified by gravitational stresses A82-16932
Functional model of the temporal and amplitude characteristics of the cardiac electric field A82-18699
Problems of the regulation of hemodynamics during a passive orthostatic test - Study of a mathematical model A82-18700
CELLS (BIOLOGY)
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report A82-17428
Visual-vestibular interactions in visual cortical cells in the cat A82-17448
Estimating cell populations A82-18688
Studies in in vivo electrochemistry N82-14793
Inborn anemias in mice [DE81-029128] N82-14795
CENTRAL NERVOUS SYSTEM
Investigation of physiological compensation processes following the surgical destruction of the labyrinth A82-16811
Nonlinear characteristics of single neurons in the vestibular nuclei A82-17430
CEREBELLUM
The brain-stem projection to the cerebellar flocculus relevant to optokinetic responses in cats A82-17463
Mossy fiber activation of the cerebellar flocculus from the visual system A82-17465
Directional plasticity of the vestibulo-ocular reflex in the cat A82-17467
The interaction between accuracy of gaze with and without head movements in patients with cerebellar ataxia A82-17472
CEREBRAL CORTEX
The functional state of some subcortical cerebral structures during adaptation and deadaptation to physical loading A82-16823
Visual-vestibular interactions in visual cortical cells in the cat A82-17448
CHROMOSOMES
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia [NASA-TM-76515] N82-14794
CHRONIC CONDITIONS
New approaches to treatment of chronic pain: A review of multidisciplinary pain clinics and pain centers [PB81-240913] N82-15778
CIRCADIAN RHYTHMS
The circadian organization of the circulatory and respiratory systems of Antarctic workers A82-17139
The effects of operator activity on the diurnal rhythm of physiological functions A82-17142
CIRCULATORY SYSTEM
The circadian organization of the circulatory and respiratory systems of Antarctic workers A82-17139
CLINICAL MEDICINE
Trial of an automated EKG analysis system in a cardiological clinic A82-16804
The ergometric determination of myocardial reserves A82-16805
Investigation of the otolith apparatus in clinical practice A82-16812
Monitoring the condition of the organism under hyperoxic conditions A82-17141
NASA biomedical applications team. Applications of aerospace technology in biology and medicine [NASA-CR-152663] N82-15710
NASA biomedical Applications Team Advisory Center for Medical Technology and Systems [NASA-CR-166755] N82-15770
New approaches to treatment of chronic pain: A review of multidisciplinary pain clinics and pain centers [PB81-240913] N82-15778
COCHLEA
Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid A82-16833
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report A82-17428
COCKPIT SIMULATORS
Influence of display and control compatibility on pilot-induced oscillations [NASA-TP-1936] N82-14804
COHERENT RADIATION
Other biological effects of radiation N82-15757
COLD ACCLIMATIZATION
The reorganization of EEG structure during adaptation to the Antarctic A82-16810
The circadian organization of the circulatory and respiratory systems of Antarctic workers A82-17139
Northern pulmonary arterial hypertension A82-17143
The effect of cold and the cold prevention N82-15755
COLD TOLERANCE
The physiological effect of heat and its prevention N82-15754
The effect of cold and the cold prevention N82-15755
COLLIMATION
Other biological effects of radiation N82-15757
COLOR VISION
Disappearance of stabilized chromatic gratings --- visual contrast sensitivity A82-16125
COMBUSTION PRODUCTS
Plan of action and milestones for Navy combustion toxicity [AD-A105623] N82-14796

**COMFORT**
Comfortable temperature and tolerable temperature
N82-15753

**COMMAND AND CONTROL**
Initiation into the utilisation of programmable industrial robots: Grafcet --- graphic engineering language
N82-14805

**COMPENSATION**
Investigation of physiological compensation processes following the surgical destruction of the labyrinth
A82-16811

**COMPRESSION LOADS**
The effects of hypokinesia in primates and bone strength
A82-16986

**COMPUTER SYSTEMS DESIGN**
Experience with the development and application of telemetric computing systems in cardiology
A82-16806

**COMPUTER TECHNIQUES**
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests
A82-16167
Trial of an automated EKG analysis system in a cardiological clinic
A82-16804

**COMPUTERIZED SIMULATION**
Simulation of human reactions under extreme conditions
A82-16938

**CONCENTRATION (COMPOSITION)**
Free amino acid concentrations in the livers of animals subjected to certain extremal factors
A82-18662

**CONDITIONING (LEARNING)**
Piribedil-induced anti-hypoxic protection in rats
A82-18738

**CONFERENCES**
Basic environmental problems of man in space; Proceedings of the Sixth International Symposium, Bonn, West Germany, November 3-6, 1980
A82-16926
Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980
A82-17426

**CONSUMABLES (SPACECREW SUPPLIES)**
STS-1 medical report
[NASA-TM-58240] N82-15711
Food and nutrition
N82-15724

**CONTAMINANTS**
Cabin pollution
N82-15760

**CONTRACTION**
A modified kinetic model of muscular contraction
A82-16810

**COORDINATION**
Active head rotations and eye-head coordination
A82-17469
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease
A82-17471
The interaction between accuracy of gaze with and without head movements in patients with cerebellar ataxia
A82-17472

**CORIOLIS EFFECT**
Vestibular tests in the selection of cosmonauts
A82-16941
Validation of predictive tests and countermeasures for space motion sickness
N82-15719

**CORONARY ARTERY DISEASE**
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests
A82-16167
Myocardial perfusion scintigraphy using a new technique, the mesh chamber
[DE81-027995] N82-15773

**CORROSION PREVENTION**
Ecological and technological problem of biodamages
N82-15766

**COSMIC RAYS**
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments
A82-16949

**COSMONAUTS**
Astronaut activity in flight and enhancement of its efficiency --- Russian book
A82-16701
Basic principles and methods for assuring the eficiency of astronaut activity in flight
A82-16702
Current problems in the psychophysiology of space work /status and future prospects/
A82-16703
Certain theoretical features of astronaut preparation
A82-16705
Psychophysiological correlates of the control activity of the astronaut
A82-16707
Certain aspects of the visual activity of astronauts
A82-16708
Problems of the control of operator state
A82-16710
Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria
A82-16711
Investigation of the statistical characteristics of astronaut operator activity directed towards the control of a manned spacecraft
A82-16712
Investigation of astronaut activity under conditions of the hydrosimulation of weightlessness
A82-16713
Information model of the dynamics of autonomous extravehicular activity
A82-16718
Investigation of the functions of an astronaut operator in information systems
A82-16721
Concerning the rationalization of the work and rest schedule of cosmonauts
A82-16728
Vestibular tests in the selection of cosmonauts
A82-16941
Radiation - Risk and protection in manned space flight
A82-16948
USSR Space Life Sciences Digest
[NASA-TM-84080] N82-15708

**COSMOS SATELLITES**
Future investigations onboard Soviet biosatellites of the Cosmos series
A82-16954

**COSMOS 782 SATELLITE**
Biomedical aspects of artificial gravity
A82-16951

**COSMOS 936 SATELLITE**
Biomedical aspects of artificial gravity
A82-16951

**COUNTERMEASURES**
Validation of predictive tests and countermeasures for space motion sickness
N82-15719

**CRASH INJURIES**
Hepato-splenic injury in aircraft accidents
A82-18735

**CREWS**
The work capacity of sailors under conditions of varying work-rest cycles
A82-18524

**CRITICAL FLICKER FUSION**
A procedure for the measurement of the critical flicker fusion frequency
A82-16809
Human vertical fusional response under open and closed loop stimulation to predictable and unpredictable disparity presentations
A82-17571

**CYTOLOGY**
Estimating cell populations
A82-18684
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735

D

DARKNESS
Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets
A82-17477
DATA PROCESSING
Monitoring the condition of the organism under hyperoxic conditions
A82-17141
DATA TRANSMISSION
Investigation of the functions of an astronaut operator in information systems
A82-16721
DECELERATION
Harmfulness of violent impact and airflow shocks
N82-15742
DECOMPRESSION SICKNESS
The physiological effect of low-air-pressure anoxia
N82-15748
Caisson disease
N82-15749
Dangers of explosive decompression
N82-15750
DECONTAMINATION
Shuttle toxicology
N82-15726
DENTISTRY
Forensic dentistry --- in aircraft accident fatalities identification
A82-18737
DEOXYRIBONUCLEIC ACID
Damage and repair of heart muscle DNA during emotional-pain stress
A82-16822
Repair of radiation damage in mammalian cells
[DE81-030824] N82-14800
Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids
[ISS-R-80/2-PT-1] N82-15734
DESIGN ANALYSIS
The design of extravehicular propulsion units
A82-16716
DIAGNOSIS
Remote Medical Diagnosis System (RMDS) utilization study
[AD-A105559] N82-15771
DIETS
Changes in blood indicators upon the inclusion of trace elements in the diet
A82-16274
Effects of the diet on brain function
A82-16942
DIFFERENCE EQUATIONS
A heat transfer analysis of scald injury
[PB81-238503] N82-15777
DIFFUSE RADIATION
Myocardial perfusion scintigraphy using a new technique, the mesh chamber
[DE81-027995] N82-15773
DIRECTIONAL CONTROL
How do we avoid confounding the direction we are looking and the direction we are moving
A82-18024
DISEASES
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease
A82-17471
DISPLAY DEVICES
Is recognition accuracy really impaired when the target is repeated in the display
A82-16893
DISPOSAL
A criterion for the disposal of M58 sleeping bags
[IZF-1979-15] N82-15782
DIURETICS
Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid
A82-16833
DOSIMETERS
Repair of radiation damage in mammalian cells
[DE81-030824] N82-14800
Radiological health
N82-15727
DYNAMIC CHARACTERISTICS
Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes
A82-17458
DYNAMIC MODELS
Information model of the dynamics of autonomous extravehicular activity
A82-16718
Simulation of manual autonomous control of an extravehicular propulsion unit /EPU/
A82-16719
A physical model of human postural dynamics
A82-17478

E

EAR PROTECTORS
Hearing protection
[IZF-1980-2] N82-15783
EARTH ATMOSPHERE
Environmental conditions of aviation and space navigation
N82-15738
EARTH PLANETARY STRUCTURE
The mass extinctions of the late Mesozoic --- iridium abundance as geologic evidence for celestial body impact
A82-17620
ECOLOGY
Ecological and technological problem of biodamages
N82-15766
EFFERENT NERVOUS SYSTEMS
Pathophysiology of motor functions in prolonged manned space flights
A82-16945
EJECTION
Harmfulness of violent impact and airflow shocks
N82-15742
EJECTION SEATS
Harmfulness of violent impact and airflow shocks
N82-15742
ELECTRIC STIMULI
Neuronal interaction between ipsilateral medial and lateral vestibular nuclei
A82-17436
Reticulovestibular organization participating in generation of horizontal fast eye movement
A82-17439
ELECTRICAL IMPEDANCE
Evaluation of the parallel conductor theory for measuring human limb blood flow by electrical admittance plethysmography
A82-17568
Measurement of systolic time intervals by electrical plethysmography Validation with invasive and noninvasive methods
A82-18742
ELECTROCARDIOGRAPHY
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests
A82-16167
Trial of an automated EKG analysis system in a cardiological clinic
A82-16804
Experience with the development and application of telemetric computing systems in cardiology
A82-16806
Functional model of the temporal and amplitude characteristics of the cardiac electric field
A82-18699
ELECTROCHEMISTRY
Studies in in vivo electrochemistry
N82-14793
ELECTROENCEPHALOGRAPHY
The effects of hyperventilation on EEG alpha-rhythm depression induced by a suggested visual representation
A82-16801
The reorganization of EEG structure during adaptation to the Antarctic
A82-16810
Monitoring the condition of the organism under hyperoxic conditions
A82-17141
ELECTROLYTE METABOLISM
Ion regulatory function of the human kidney in prolonged space flights
A82-16936

ELECTROLYTIC CELLS
Studies in in vivo electrochemistry
N82-14793
ELECTROMYOGRAPHY
Early directional influence of visual motion cues on postural control in the falling monkey
A82-17459
ELECTROPHORESIS
Microdisc gel electrophoresis in sodium dodecyl sulfate of organic material from rat otoconial complexes
A82-17482
ELECTROPHYSIOLOGY
Neuronal interaction between ipsilateral medial and lateral vestibular nuclei
A82-17436
The brain-stem projection to the cerebellar flocculus relevant to optokinetic responses in cats
A82-17463
Mossy fiber activation of the cerebellar flocculus from the visual system
A82-17465
Studies in in vivo electrochemistry
N82-14793
ELECTROPLETHYSMOGRAPHY
Evaluation of the parallel conductor theory for measuring human limb blood flow by electrical admittance plethysmography
A82-17568
Magnetic measurement of cardiac volume changes
A82-17569
EMERGENCIES
Emergency Medical Services System (EMSS)
N82-15716
EMOTIONAL FACTORS
The effect of emotional stress on astronaut activity in a radio-telegraphy system
A82-16722
Biogenic monoamine concentrations in autonomic nervous system ganglia during acute experimental emotional stress
A82-16817
EMOTIONS
Informational need of emotional stress --- effect on operator performance of visual tasks
A82-16943
ENDOCRINE GLANDS
An overview of the endocrine and metabolic changes in manned space flight
A82-16935
ENDOCRINE SYSTEMS
Biochemistry and endocrinology results
N82-15721
ENDOLYMPH
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report
A82-17428
ENERGETIC PARTICLES
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments
A82-16949
EPIDEMIOLOGY
Conference on plant virology
N82-15767
EPINEPHRINE
The response of the hematic system of adrenalectomized mice to stressor activity
A82-16814
EPITHELIUM
The effects of heat stress on the morphogenetic potencies of the nephron epithelium
A82-16825
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report
A82-17428
EPOXY MATRIX COMPOSITES
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[ASLE PREPRINT 81-LC-2D-1] A82-18402
ERGOMETERS
The ergometric determination of myocardial reserves
A82-16805
ERROR ANALYSIS
Estimating cell populations
A82-18604
Simulator data on human error probabilities
[DE81-026094] N82-15786
ERROR SIGNALS
The 'Error' signals subserving adaptive gain control in the primate vestibulo-ocular reflex
A82-17468
ERYTHROCYTES
Extra-erythrocytic hemoglobin and iron-bearing hemoglobin destruction products - A system for the amplification of the toxic effects of hyperoxia
A82-16803
Plasma erythropoietins during training for hyperoxic conditions
A82-17147
ESCHERICHIA
Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids
[ISS-R-80/2-PT-1] N82-15734
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Dipole localization of average and single visual evoked potentials
A82-17570
EVOLUTION (DEVELOPMENT)
Human roles in future space operations
A82-16955
EXERCISE PHYSIOLOGY
Cardiovascular reflexes during rest and exercise modified by gravitational stresses
A82-16932
Effect of physical fitness and training on physiological responses to hypogravity
A82-16933
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes
A82-17145
EXHAUST SYSTEMS
Evaluation of air cleaning and monitoring equipment used in recirculation systems
[PB81-242695] N82-15788
EXOBIOLOGY
Summary of experiments onboard Soviet biosatellites
A82-16929
U.S. biological experiments in space
A82-16930
Trends in space life support
A82-16953
Experimental biology and medicine in space
A82-17123
Prospects for the detection of interstellar biological molecules

USSR Space Life Sciences Digest
[NASA-TM-84080] N82-15708
Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1
[BMFT-FB-W-81-037] N82-15732
Concept study of a life sciences payload element (PLE) for the SL-D1 mission
[BMFT-FB-W-81-038] N82-15733
EXPLOSIVE DECOMPRESSION
Dangers of explosive decompression
N82-15750
EXPOSURE
Health stabilization program
N82-15715
Problems in evaluating health effects of occupational and environmental exposures
[DE81-020440] N82-15774
EXTRATERRESTRIAL RADIATION
Radiation - Risk and protection in manned space flight
A82-16948
EXTRAVEHICULAR MOBILITY UNITS
The design of extravehicular propulsion units
A82-16716

Information model of the dynamics of autonomous extravehicular activity A82-16718
Simulation of manual autonomous control of an extravehicular propulsion unit /EPU/ A82-16719

EYE (ANATOMY)
Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals A82-17429
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-125/B-IIb Tetanus toxin fragment A82-17441
Organization of the avian accessory optic system A82-17445

EYE MOVEMENTS
Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals A82-17429
Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis A82-17431
Effects of gravity on rotatory nystagmus in monkeys A82-17432
Dynamic characteristics of the otolithic oculomotor system A82-17433
Binocular counterrolling in humans with unilateral labyrinthectomy and in normal controls A82-17434
Ocular torsion on earth and in weightlessness A82-17435
The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons A82-17437
Reticulovestibular organization participating in generation of horizontal fast eye movement A82-17439
Horizontal eye movement signals in second-order vestibular nuclei neurons in the cat A82-17440
Some thoughts about the three neurons in the vestibular ocular reflex A82-17442
Visual-vestibular interaction in vestibular neurons - Functional pathway organization A82-17446
Neural activity in the nucleus reticularis tegmenti pontis in the monkey related to eye movements and visual stimulation A82-17447
Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation A82-17449
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey A82-17450
Velocity storage, nystagmus, and visual-vestibular interactions in humans A82-17460
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements A82-17462
The brain-stem projection to the cerebellar flocculus relevant to optokinetic responses in cats A82-17463
Visual mossy fiber inputs to the flocculus of the monkey A82-17464
Input-output activity of the primate flocculus during visual-vestibular interaction A82-17466
Directional plasticity of the vestibulo-ocular reflex in the cat A82-17467
The 'Error' signals subserving adaptive gain control in the primate vestibulo-ocular reflex A82-17468
Active head rotations and eye-head coordination A82-17469
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease A82-17471
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation A82-17473
A hypothetical explanation for periodic alternating nystagmus - Instability in the optokinetic-vestibular system A82-17474
Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys A82-17475
Acoustic-induced eye movements A82-17476
Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal A82-17484

F

FACE (ANATOMY)
Evaluation of chemical protective facelets and comparison of four prototpyes
[IZF-1980-15] N82-15784

FARM CROPS
Conference on plant virology N82-15767

FEEDBACK
Effects of task feedback and stringency of external pacing on mental load and work performance A82-18325

FEEDBACK CONTROL
The use of a psychophysiological feedback system for purposes of activity optimization A82-16706
Robot with sense of touch A82-17133

FIBROSIS
Morphology of experimental pneumoconiosis arising from the effects of lunar soil A82-16824

FIELD EMISSION
Field-ion-microscope observations of radiation effects
[DE81-030934] N82-14802

FINITE DIFFERENCE THEORY
A heat transfer analysis of scald injury
[PB81-230503] N82-15777

FIRE PREVENTION
Oxygen toxication N82-15751

FIRST AID
Shuttle orbital medical system N82-15718

FITNESS
Evaluation of crew health N82-15712

FLIGHT CREWS
Liver pathology in aircrew A82-18734
Aviation medical guarantees N82-15761

FLIGHT HAZARDS
Harmfulness of violent impact and airflow shocks N82-15742
Caisson disease N82-15749

FLIGHT SAFETY
Psychophysiological safety control in long-duration space flights A82-16726
Aviation medical guarantees N82-15761
Space navigation medical guarantees and medical supervision N82-15762

FLIGHT SIMULATORS
Human orientation in space
[AIAA PAPER 82-0822] A82-17940

FLIGHT STRESS (BIOLOGY)
Fundamentals of aeronautical and aerospace medical science
[AD-A102298] N82-15736
General laws of aviation and space navigation environmental effects on the human body N82-15739

FLUID FLOW
Current views and future programs in cardiovascular physiology in space A82-16931

FLYING PERSONNEL
Study of the discrimination capacity of the auditory analyzer in flight personnel
A82-10523

FOOD PROCESSING
All-Union Conference on New Sources of Food Protein and Their Application
N82-15765

FOULING
Ecological and technological problem of biodamages
N82-15766

FREE FALL
Early directional influence of visual motion cues on postural control in the falling monkey
A82-17459

FREQUENCY RESPONSE
A procedure for the measurement of the critical flicker fusion frequency
A82-16809

G

GANGLIA
Biogenic monoamine concentrations in autonomic nervous system ganglia during acute experimental emotional stress
A82-16817

GAS DISSOCIATION
Preprototype nitrogen supply subsystem development
[NASA-CR-166192] N82-15780

GASEOUS DIFFUSION
Pulmonary diffusing capacity under conditions of restricted motor activity
A82-17140

GEARS
The Link-Miles driver training simulator for tracked vehicles: Influence of cabin motion on gear-change learning
[IZF-1980-24] N82-15785

GEOCHRONOLOGY
The mass extinctions of the late Mesozoic --- iridium abundance as geologic evidence for celestial body impact
A82-17620

GNOTOBIOTICS
Medical microbiology of crewmembers
N82-15723

GRATINGS (SPECTRA)
Disappearance of stabilized chromatic gratings --- visual contrast sensitivity
A82-16125

GRAVITATIONAL EFFECTS
Cardiovascular reflexes during rest and exercise modified by gravitational stresses
A82-16932
How important are changes in body weight for mass perception
A82-16944
Effects of gravity on rotatory nystagmus in monkeys
A82-17432
Medical problems of gravitational changes and powered flight
N82-15740
Injury and protection of overweightness
N82-15741

GRINDING (MATERIAL REMOVAL)
Humanization of working places in the foundry by use of an automatic fettling equipment
[BMFT-FB-HA-81-004] N82-15781

GROUND SUPPORT SYSTEMS
Emergency Medical Services System (EMSS)
N82-15716

H

HABITUATION (LEARNING)
Vestibular habituation in man and monkey during sinusoidal rotation
A82-17453
Unilateral habituation of vestibulo-ocular responses in the cat
A82-17454

HAZARDS
Airborne ultrasound: Measurement and possible adverse effects
[PB81-240459] N82-15775

HEAD MOVEMENT
Dynamic characteristics of the otolithic oculomotor system
A82-17433
Binocular counterrolling in humans with unilateral labyrinthectomy and in normal controls
A82-17434
The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons
A82-17437
Some thoughts about the three neurons in the vestibular ocular reflex
A82-17442
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements
A82-17462
Directional plasticity of the vestibulo-ocular reflex in the cat
A82-17467
The 'Error' signals subserving adaptive gain control in the primate vestibulo-ocular reflex
A82-17468
Active head rotations and eye-head coordination
A82-17469
Vestibular influence upon head-eye coordination
A82-17470
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease
A82-17471
The interaction between accuracy of gaze with and without head movements in patients with cerebellar ataxia
A82-17472
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473
Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys
A82-17475
Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets
A82-17477
Different effects involved in the interaction of saccades and the vestibulo-ocular reflex
A82-17480
Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal
A82-17484

HEALTH
STS-1 medical report
[NASA-TM-58240] N82-15711
Evaluation of crew health
N82-15712
Health stabilization program
N82-15715

HEALTH PHYSICS
Radiological health
N82-15727
Problems in evaluating health effects of occupational and environmental exposures
[DE81-028440] N82-15774
Airborne ultrasound: Measurement and possible adverse effects
[PB81-240459] N82-15775

HEARING
Noise and sense of hearing
N82-15747

HEART DISEASES
Trial of an automated EKG analysis system in a cardiological clinic
A82-16804
Prevention of hypoxic heart damage by the use of oxypyridine-class antioxidants
A82-16821
Damage and repair of heart muscle DNA during emotional-pain stress
A82-16822
The role of physical training in the prevention of ischemic heart disease
A82-18525
Effect of altitude exposure on induction of Streptococcal endocarditis in young and middle-aged rats
A82-18740

HEART FUNCTION
Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment
A82-17144

The dynamics of cardiac rhythm parameters during work under various loads --- by air traffic controllers A82-17146
Functional model of the temporal and amplitude characteristics of the cardiac electric field A82-18699
Problems of the regulation of hemodynamics during a passive orthostatic test - Study of a mathematical model A82-18700

**HEART RATE**
Magnetic measurement of cardiac volume changes A82-17569
Crew cardiovascular profile N82-15720

**HEART VALVES**
Effect of altitude exposure on induction of Streptococcal endocarditis in young and middle-aged rats A82-18740

**HEAT ACCLIMATIZATION**
Some characteristics of thermal adaptation in small laboratory animals A82-16971
The physiological effect of heat and its prevention N82-15754

**HEAT STROKE**
The physiological effect of heat and its prevention N82-15754

**HEAT TOLERANCE**
The effects of heat stress on the morphogenetic potencies of the nephron epithelium A82-16825
The physiological effect of heat and its prevention N82-15754

**HEAT TRANSFER**
A heat transfer analysis of scald injury [PB81-238503] N82-15777

**HEAT TRANSFER COEFFICIENTS**
A heat transfer analysis of scald injury [PB81-238503] N82-15777

**HEMATOLOGY**
The response of the hematic system of adrenalectomized mice to stressor activity A82-16814
Hematological and immunological changes during space flight A82-16937
Hematological and immunological analyses N82-15722

**HEMATOPOIESIS**
Plasma erythropoietins during training for hyperoxic conditions A82-17147

**HEMATOPOIETIC SYSTEM**
Changes in blood indicators upon the inclusion of trace elements in the diet A82-16274

**HEMODYNAMIC RESPONSES**
Changes in Hageman factor system indicators during human adaptation to intense physical loading A82-16816
Cardiovascular reflexes during rest and exercise modified by gravitational stresses A82-16932
Status of vestibular function after prolonged bedrest A82-16940
Problems of the regulation of hemodynamics during a passive orthostatic test - Study of a mathematical model A82-18700
Crew cardiovascular profile N82-15720
Non-invasive pulmonary arterial pressure measurement [PB81-239410] N82-15776

**HEMOGLOBIN**
Extra-erythrocytic hemoglobin and iron-bearing hemoglobin destruction products - A system for the amplification of the toxic effects of hyperoxia A82-16803

**HEREDITY**
Inborn anemias in mice [DE81-029128] N82-14795

**HEURISTIC METHODS**
Simulation of human reactions under extreme conditions A82-16934

**HIGH GRAVITY ENVIRONMENTS**
Injury and protection of overweightness N82-15741

**HISTOCHEMICAL ANALYSIS**
Inborn anemias in mice [DE81-029128] N82-14795

**HISTORIES**
The developmental history of aeronautical and aerospace medical science N82-15737

**HORIZONTAL ORIENTATION**
The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons A82-17437
Horizontal eye movement signals in second-order vestibular nuclei neurons in the cat A82-17440

**HUMAN BEINGS**
Human roles in future space operations A82-16955

**HUMAN BODY**
The age characteristics of physical thermoregulation A82-16808
A physical model of human postural dynamics A82-17478

**HUMAN FACTORS ENGINEERING**
Basic principles and methods for assuring the efficiency of astronaut activity in flight A82-16702
A physical model of human postural dynamics A82-17478
Harmfulness of violent impact and airflow shocks N82-15742
Human body reaction to vibration N82-15743
The effects of rotation and oscillation: Aerial sickness N82-15744
A criterion for the disposal of M58 sleeping bags [IZF-1979-15] N82-15782
Hearing protection [IZF-1980-2] N82-15783
Evaluation of chemical protective facelets and comparison of four prototpyes [IZF-1980-15] N82-15784
Simulator data on human error probabilities [DE81-026094] N82-15786
Use of a television multipoint x-y tracker for determining the transmission of vibrations on human beings --- human factors in man machine systems N82-15787

**HUMAN PATHOLOGY**
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease A82-17471
A hypothetical explanation for periodic alternating nystagmus - Instability in the optokinetic-vestibular system A82-17474
Temporal bone characteristics in Meniere's disease A82-17481
Liver pathology in aircrew A82-18734
Forensic dentistry --- in aircraft accident fatalities identification A82-18737

**HUMAN PERFORMANCE**
Changes in blood indicators upon the inclusion of trace elements in the diet A82-16274
Concerning a model of human activity A82-16704
An investigation of memory during the process of adaptation to mountain conditions A82-17138
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey A82-17450

**HUMAN REACTIONS**
Simulation of human reactions under extreme conditions A82-16934

Nausogenic properties of various dynamic and
static force environments --- in space
A82-16938
Informational need of emotional stress --- effect
on operator performance of visual tasks
A82-16943
Vestibular influence upon head-eye coordination
A82-17470
Human vertical fusional response under open and
closed loop stimulation to predictable and
unpredictable disparity presentations
A82-17571

**HUMAN TOLERANCES**
Changes in Hageman factor system indicators during
human adaptation to intense physical loading
A82-16816
Repair of radiation damage in mammalian cells
[DE81-030824] N82-14800
Noise and sense of hearing
N82-15747
The physiological effect of low-air-pressure anoxia
N82-15748
Dangers of explosive decompression
N82-15750
The relationship of body temperature to
environmental temperature
N82-15752

**HYDRAZINES**
Preprototype nitrogen supply subsystem development
[NASA-CR-166192] N82-15780

**HYDROGEN**
Preprototype nitrogen supply subsystem development
[NASA-CR-166192] N82-15780

**HYGIENE**
The potable water
N82-15725

**HYPERBARIC CHAMBERS**
Oxygen tension in albino rat abdominal cavity
organs in normo- and hyperoxybaria
A82-16969

**HYPEROXIA**
Extra-erythrocytic hemoglobin and iron-bearing
hemoglobin destruction products - A system for
the amplification of the toxic effects of
hyperoxia
A82-16803
Oxygen tension in albino rat abdominal cavity
organs in normo- and hyperoxybaria
A82-16969
The state of the air-blood barrier in hyperoxia
A82-16970
Monitoring the condition of the organism under
hyperoxic conditions
A82-17141
Plasma erythropoietins during training for
hyperoxic conditions
A82-17147

**HYPERTENSION**
Northern pulmonary arterial hypertension
A82-17143

**HYPERVENTILATION**
The effects of hyperventilation on EEG
alpha-rhythm depression induced by a suggested
visual representation
A82-16801

**HYPNOSIS**
Comparative psychophysiological evaluation of the
effectiveness of psychic models of body hypo-
and hyperponderousness
A82-16723
The activity of psychic models of hypogravity
during 30-day experiments
A82-16725

**HYPODYNAMIA**
A compendium of hypokinetic and hypodynamic animal
studies
[NASA-CR-3485] N82-15709

**HYPOKINESIA**
The effects of immobilization stress on diacyl and
plasmogenic phospholipids in various organs and
tissues of the rat
A82-16802
The effects of immobilization on the development
of experimental atherosclerosis in rabbits
A82-16815
Effects of disuse by limb immobilization on
different muscle fiber types
A82-16830
Status of vestibular function after prolonged
bedrest
A82-16940
The effects of hypokinesia in primates and bone
strength
A82-16946
Pulmonary diffusing capacity under conditions of
restricted motor activity
A82-17140
The effects of hypokinesia on the spectral
characteristics of free amino acids in the
skeletal muscles and the blood
A82-18661
Polyploidization delay in rat hepatocytes under
liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794
A compendium of hypokinetic and hypodynamic animal
studies
[NASA-CR-3485] N82-15709

**HYPOTHALAMUS**
Functional characteristics of the pilot
hypothalamus-hypophysis-adrenal cortex system
A82-16275

**HYPOTHERMIA**
The effect of cold and the cold prevention
N82-15755

**HYPOXEMIA**
Oxygen tension in albino rat abdominal cavity
organs in normo- and hyperoxybaria
A82-16969

**HYPOXIA**
Prevention of hypoxic heart damage by the use of
oxypyridine-class antioxidents
A82-16821
Characteristics of loading hypoxia
A82-16968
Check your oxygen --- oxygen supply equipment and
aircraft safety
A82-18736
Piribedil-induced anti-hypoxic protection in rats
A82-18738
The effect of acetazolamide on the proteinuria of
altitude
A82-18739

**I**

**ILLUSIONS**
Flight illusions
N82-15745

**IMAGE ENHANCEMENT**
Evaluative studies in nuclear medicine research.
Emission-computed tomography assessment
[DE81-030168] N82-14801

**IMAGE MOTION COMPENSATION**
Natural retinal image motion - Origin and change
A82-17452

**IMMOBILIZATION**
The effects of immobilization stress on diacyl and
plasmogenic phospholipids in various organs and
tissues of the rat
A82-16802
The response of the hematic system of
adrenalectomized mice to stressor activity
A82-16814
The effects of immobilization on the development
of experimental atherosclerosis in rabbits
A82-16815

**IMMUNOLOGY**
Hematological and immunological changes during
space flight
A82-16937
Hematological and immunological analyses
N82-15722

**IMPAIRMENT**
Evaluation of short-term bioassays to predict
functional impairment. Selected short-term
pulmonary toxicity tests
[AD-A103766] N82-14797

**IN-FLIGHT MONITORING**
Inflight observations
N82-15713

**INDEXES (DOCUMENTATION)**
Evaluation of short-term bioassays to predict
functional impairment. development of pulmonary
bioassays in small animals: Directory of
Institutions; individuals involved in utilization
[AD-A103767] N82-14798

INTERFERENCE
Is recognition accuracy really impaired when the target is repeated in the display
A82-16893

INTERSTELLAR MATTER
Prospects for the detection of interstellar biological molecules
A82-17361

INTOXICATION
Liver pathology in aircrew
A82-18734

ION MICROSCOPES
Field-ion-microscope observations of radiation effects
[DE81-030934] N82-14802

IONIZING RADIATION
Ionizing radiation and its biological effects
N82-15756

IONS
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735

IRIDIUM ISOTOPES
The mass extinctions of the late Mesozoic --- iridium abundance as geologic evidence for celestial body impact
A82-17620

IRON
Extra-erythrocytic hemoglobin and iron-bearing hemoglobin destruction products - A system for the amplification of the toxic effects of hyperoxia
A82-16803

ISCHEMIA
The role of physical training in the prevention of ischemic heart disease
A82-18525

Myocardial perfusion scintigraphy using a new technique, the mesh chamber
[DE81-027995] N82-15773

J

JOINTS (ANATOMY)
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[ASLE PREPRINT 81-LC-2D-1] A82-18402

K

KIDNEYS
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

L

LABYRINTH
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease
A82-17471

Temporal bone characteristics in Meniere's disease
A82-17481

The role of the plantar mechanoreceptor in equilibrium control
A82-17483

LABYRINTHECTOMY
Investigation of physiological compensation processes following the surgical destruction of the labyrinth
A82-16811

Binocular counterrolling in humans with unilateral labyrinthectomy and in normal controls
A82-17434

LANTHANUM
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report
A82-17428

LASER APPLICATIONS
Other biological effects of radiation
N82-15757

LAW (JURISPRUDENCE)
Forensic dentistry --- in aircraft accident fatalities identification
A82-18737

LESIONS
The differential diagnosis of an asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions
A82-16813

Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal
A82-17484

LIFE SCIENCES
'Hot spots' in the problem of the origin of life
A82-17360

Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1
[BMFT-FB-W-81-037] N82-15732

USSR report: Life sciences biomedical and behavioral sciences, no. 13
[JPRS-79639] N82-15763

LIFE SUPPORT SYSTEMS
Trends in space life support
A82-16953

Evaluation of chemical protective facelets and comparison of four prototpyes
[IBP-1980-15] N82-15784

LIGHT (VISIBLE RADIATION)
Visual problems in aviation and space navigation
N82-15758

LIMBS (ANATOMY)
Effects of disuse by limb immobilization on different muscle fiber types
A82-16830

Evaluation of the parallel conductor theory for measuring human limb blood flow by electrical admittance plethysmography
A82-17568

LIPID METABOLISM
The effects of immobilization stress on diacyl and plasmogenic phospholipids in various organs and tissues of the rat
A82-16802

The effects of immobilization on the development of experimental atherosclerosis in rabbits
A82-16815

LIVER
Free amino acid concentrations in the livers of animals subjected to certain extremal factors
A82-18662

Liver pathology in aircrew
A82-18734

Hepato-splenic injury in aircraft accidents
A82-18735

Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794

Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

LOAD TESTS
The effects of hypokinesia in primates and bone strength
A82-16946

LOCOMOTION
How do we avoid confounding the direction we are looking and the direction we are moving
A82-18024

LONG DURATION SPACE FLIGHT
Psychophysiological safety control in long-duration space flights
A82-16726

Basic environmental problems of man in space; Proceedings of the Sixth International Symposium, Bonn, West Germany, November 3-6, 1980
A82-16926

An overview of the endocrine and metabolic changes in manned space flight
A82-16935

Ion regulatory function of the human kidney in prolonged space flights
A82-16936

Hematological and immunological changes during space flight
A82-16937

Status of vestibular function after prolonged bedrest
A82-16940

Pathophysiology of motor functions in prolonged manned space flights
A82-16945

The effects of hypokinesia in primates and bone strength
A82-16946
Bone effects of space flight - Analysis by quantum concept of bone remodelling
A82-16947
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments
A82-16949
Biomedical aspects of artificial gravity
A82-16951
Trends in space life support
A82-16953
USSR Space Life Sciences Digest
[NASA-TM-84080] N82-15708

LOW PRESSURE
The physiological effect of low-air-pressure anoxia
N82-15748
Caisson disease
N82-15749

LUNAR SOIL
Morphology of experimental pneumoconiosis arising from the effects of lunar soil
A82-16824

LUNG MORPHOLOGY
Morphology of experimental pneumoconiosis arising from the effects of lunar soil
A82-16824
The state of the air-blood barrier in hyperoxia
A82-16970
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

LUNGS
Simulation of human reactions under extreme conditions
A82-16934
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799

M

MAGNETIC MEASUREMENT
Magnetic measurement of cardiac volume changes
A82-17569

MAGNETIC PERMEABILITY
Magnetic measurement of cardiac volume changes
A82-17569

MAN MACHINE SYSTEMS
Astronaut activity in flight and enhancement of its efficiency --- Russian book
A82-16701
Basic principles and methods for assuring the eficiency of astronaut activity in flight
A82-16702
The use of a psychophysiclogical feedback system for purposes of activity optimization
A82-16706
Problems of the control of operator state
A82-16710
Investigation of the statistical characteristics of astronaut operator activity directed towards the control of a manned spacecraft
A82-16712
Visual scanning behavior and mental workload in aircraft pilots
A82-18741
Simulator data on human error probabilities
[DE81-026094] N82-15786
Use of a television multipoint x-y tracker for determining the transmission of vibrations on human beings --- human factors in man machine systems
N82-15787

MANNED SPACE FLIGHT
Astronaut activity in flight and enhancement of its efficiency --- Russian book
A82-16701
Basic principles and methods for assuring the eficiency of astronaut activity in flight
A82-16702
Current problems in the psychophysiology of space work /status and future prospects/
A82-16703
Basic environmental problems of man in space; Proceedings of the Sixth International Symposium, Bonn, West Germany, November 3-6, 1980
A82-16926
U.S. manned space flight: The first twenty years - A biomedical status report
A82-16927
Summary of medical investigations in the U.S.S.R. manned space missions
A82-16928
An overview of the endocrine and metabolic changes in manned space flight
A82-16935
Radiation - Risk and protection in manned space flight
A82-16948
Anesthesia, surgical aid and resuscitation in manned space missions
A82-16950

MANNED SPACECRAFT
Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria
A82-16711
Investigation of the statistical characteristics of astronaut operator activity directed towards the control of a manned spacecraft
A82-16712

MANUAL CONTROL
Simulation of manual autonomous control of an extravehicular propulsion unit /EPU/
A82-16719

MASKS
Evaluation of chemical protective facelets and comparison of four prototpyes
[IZF-1980-15] N82-15784

MASS
How important are changes in body weight for mass perception
A82-16944

MATRIX THEORY
Determination of the angular orientation of the body of a walking machine
A82-16288

MECHANORECEPTORS
The role of the plantar mechanoreceptor in equilibrium control
A82-17483

MEDICAL ELECTRONICS
Trial of an automated EKG analysis system in a cardiological clinic
A82-16804
Remote Medical Diagnosis System (RMDS) utilization study
[AD-A105559] N82-15771

MEDICAL EQUIPMENT
Shuttle orbital medical system
N82-15718

MEDICAL SCIENCE
Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal
A82-17404
Crew medical training
N82-15717
Fundamentals of aeronautical and aerospace medical science
[AD-A102298] N82-15736
The developmental history of aeronautical and aerospace medical science
N82-15737
USSR report: Life sciences biomedical and behavioral sciences, no. 13
[JPRS-79639] N82-15763
NASA biomedical Applications Team Advisory Center for Medical Technology and Systems
[NASA-CR-166755] N82-15770
Myocardial perfusion scintigraphy using a new technique, the mesh chamber
[DE81-027995] N82-15773

MEDICAL SERVICES
Emergency Medical Services System (EMSS)
N82-15716

MEMBRANE STRUCTURES
Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid
A82-16833

**MEMORY**
An investigation of memory during the process of adaptation to mountain conditions
A82-17138
**MENTAL HEALTH**
Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment
A82-17144
**MENTAL PERFORMANCE**
An investigation of memory during the process of adaptation to mountain conditions
A82-17138
Effects of task feedback and stringency of external pacing on mental load and work performance
A82-18325
**METABOLISM**
An overview of the endocrine and metabolic changes in manned space flight
A82-16935
**METAL WORKING**
Humanization of working places in the foundry by use of an automatic fettling equipment
[BMFT-FB-HA-81-004] N82-15781
**METEOROIDS**
Dangers of explosive decompression
N82-15750
**MICROBIOLOGY**
Medical microbiology of crewmembers
N82-15723
USSR report: Life sciences biomedical and behavioral sciences, no. 13
[JPRS-79639] N82-15763
**MICROORGANISMS**
Ecological and technological problem of biodamages
N82-15766
**MILITARY AVIATION**
Recent life change measurement in Canadian Forces pilots
A82-18733
**MINERAL METABOLISM**
Changes in blood indicators upon the inclusion of trace elements in the diet
A82-16274
**MITOSIS**
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794
**MOLECULAR GASES**
Prospects for the detection of interstellar biological molecules
A82-17361
**MOLECULAR STRUCTURE**
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735
**MONITORS**
Evaluation of air cleaning and monitoring equipment used in recirculation systems
[PB81-242695] N82-15788
**MORPHOLOGY**
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794
**MOTION PERCEPTION**
Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object
A82-16807
Model for the perception of moving and fixed objects
A82-16820
Directional sensitivity of individual vertebrate hair cells to controlled deflection of their hair bundles --- in frog vestibules
A82-17427
Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation
A82-17449
Visually induced self-motion sensation adapts rapidly to left-right reversal of vision
A82-17455
Early directional influence of visual motion cues on postural control in the falling monkey
A82-17459
How do we avoid confounding the direction we are looking and the direction we are moving
A82-18024
**MOTION SICKNESS**
Nausogenic properties of various dynamic and static force environments --- in space
A82-16938
Coping with space motion sickness in Spacelab missions
A82-16939
Vestibular tests in the selection of cosmonauts
A82-16941
Motion sickness due to vision reversal - Its absence in stroboscopic light
A82-17451
Vestibular habituation in man and monkey during sinusoidal rotation
A82-17453
Human orientation in space
[AIAA PAPER 82-0422] A82-17940
STS-1 medical report
[NASA-TM-58240] N82-15711
Validation of predictive tests and countermeasures for space motion sickness
N82-15719
The effects of rotation and oscillation: Aerial sickness
N82-15744
**MOTION SICKNESS DRUGS**
Coping with space motion sickness in Spacelab missions
A82-16939
The effects of rotation and oscillation: Aerial sickness
N82-15744
**MOTION SIMULATORS**
The Link-Miles driver training simulator for tracked vehicles: Influence of cabin motion on gear-change learning
[ISF-1980-24] N82-15785
**MUSCLES**
Effects of disuse by limb immobilization on different muscle fiber types
A82-16830
Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals
A82-17429
**MUSCULAR FUNCTION**
A modified kinetic model of muscular contraction
A82-16810
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment
A82-17441
**MUSCULAR STRENGTH**
Pathophysiology of motor functions in prolonged manned space flights
A82-16945
**MUSCULOSKELETAL SYSTEM**
The effects of hypokinesia on the spectral characteristics of free amino acids in the skeletal muscles and the blood
A82-18661
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772
**MYOCARDIAL INFARCTION**
The ergometric determination of myocardial reserves
A82-16805
**MYOCARDIUM**
Damage and repair of heart muscle DNA during emotional-pain stress
A82-16822

**N**

**NASA PROGRAMS**
U.S. biological experiments in space
A82-16930
**NAUSEA**
Nausogenic properties of various dynamic and static force environments --- in space
A82-16938
Coping with space motion sickness in Spacelab missions
A82-16939

**NECK (ANATOMY)**
Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics
A82-17456
Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473

**NERVES**
Phasic components of frog semicircular canal
A82-17430
Neuronal interaction between ipsilateral medial and lateral vestibular nuclei
A82-17436
Reticulovestibular organization participating in generation of horizontal fast eye movement
A82-17439

**NERVOUS SYSTEM**
Studies in in vivo electrochemistry
N82-14793

**NEUROLOGY**
Studies in in vivo electrochemistry
N82-14793

**NEURONS**
Neuronal interaction between ipsilateral medial and lateral vestibular nuclei
A82-17436
The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons
A82-17437
Nonlinear characteristics of single neurons in the vestibular nuclei
A82-17438
Reticulovestibular organization participating in generation of horizontal fast eye movement
A82-17439
Horizontal eye movement signals in second-order vestibular nuclei neurons in the cat
A82-17440
Some thoughts about the three neurons in the vestibular ocular reflex
A82-17442
Cat medial pontine neurons in vestibular nystagmus
A82-17443
Visual-vestibular interaction in vestibular neurons - Functional pathway organization
A82-17446
Neural activity in the nucleus reticularis tegmenti pontis in the monkey related to eye movements and visual stimulation
A82-17447
Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics
A82-17456
Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements
A82-17462

**NEUROPHYSIOLOGY**
The effects of hyperventilation on EEG alpha-rhythm depression induced by a suggested visual representation
A82-16801
Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object
A82-16807
Cat medial pontine neurons in vestibular nystagmus
A82-17443
Is transmission between the vestibular type I hair cell and its primary afferent chemical
A82-17444
Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation
A82-17449
Visual mossy fiber inputs to the flocculus of the monkey
A82-17464
Mossy fiber activation of the cerebellar flocculus from the visual system
A82-17465
A hypothetical explanation for periodic alternating nystagmus - Instability in the optokinetic-vestibular system
A82-17474

**NEUROTRANSMITTERS**
Effects of the diet on brain function
A82-16942

**NEUTRON ACTIVATION ANALYSIS**
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

**NEUTRON IRRADIATION**
USSR report: Life sciences biomedical and behavioral sciences, no. 13
[JPRS-79639] N82-15763

**NITROGEN**
Preprototype nitrogen supply subsystem development
[NASA-CR-166192] N82-15780

**NOISE (SOUND)**
Noise and sense of hearing
N82-15747

**NOISE POLLUTION**
Noise and sense of hearing
N82-15747

**NUMERICAL CONTROL**
Robot with sense of touch
A82-17133
Initiation into the utilization of programmable industrial robots: Grafcet --- graphic engineering language
N82-14805
Methods for linking item parameters
[AD-A105509] N82-15779

**NUTRITION**
Effects of the diet on brain function
A82-16942

**NUTRITIONAL REQUIREMENTS**
STS-1 medical report
[NASA-TM-58240] N82-15711
Food and nutrition
N82-15724

**NYSTAGMUS**
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey
A82-17450
Velocity storage, nystagmus, and visual-vestibular interactions in humans
A82-17460
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473
Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys
A82-17475

O

**OCULOMOTOR NERVES**
Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980
A82-17426
Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals
A82-17429
Dynamic characteristics of the otolithic oculomotor system
A82-17433
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment
A82-17441
Organization of the avian accessory optic system
A82-17445
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements
A82-17462
Directional plasticity of the vestibulo-ocular reflex in the cat
A82-17467

**ONBOARD EQUIPMENT**
Shuttle orbital medical system
N82-15718

OPERATIONAL HAZARDS
An evaluation of engineering control technology for spray painting
[PB81-243123] N82-15789
OPERATOR PERFORMANCE
The use of a psychophysiological feedback system for purposes of activity optimization A82-16706
Experimental study of the characteristics of the detection of objects on a TV display by an operator under conditions of time deficit A82-16714
Simulation of operator activity in a system for the technical servicing of a space station A82-16717
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man A82-16720
The effects of a light blue background on the operator visual analyzer A82-16727
Informational need of emotional stress --- effect on operator performance of visual tasks A82-16943
The effects of operator activity on the diurnal rhythm of physiological functions A82-17142
Functional model of the temporal and amplitude characteristics of the cardiac electric field A82-18699
OPTICAL MEASURING INSTRUMENTS
A procedure for the measurement of the critical flicker fusion frequency A82-16809
OPTICAL TRACKING
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements A82-17462
Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets A82-17477
OPTIMAL CONTROL
The use of a psychophysiological feedback system for purposes of activity optimization A82-16706
Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria A82-16711
ORGANIC COMPOUNDS
Organic compounds in space and the problem of the origin of life A82-17362
Microdisc gel electrophoresis in sodium dodecyl sulfate of organic material from rat otoconial complexes A82-17482
ORTHOSTATIC TOLERANCE
Effect of physical fitness and training on physiological responses to hypogravity A82-16933
Problems of the regulation of hemodynamics during a passive orthostatic test - Study of a mathematical model A82-18700
OSCILLATIONS
Influence of display and control compatibility on pilot-induced oscillations
[NASA-TP-1936] N82-14804
OTOLITH ORGANS
Investigation of the otolith apparatus in clinical practice A82-16812
Nausogenic properties of various dynamic and static force environments --- in space A82-16938
Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis A82-17431
Dynamic characteristics of the otolithic oculomotor system A82-17433
Binocular counterrolling in humans with unilateral labyrinthectomy and in normal controls A82-17434
Ocular torsion on earth and in weightlessness A82-17435
Microdisc gel electrophoresis in sodium dodecyl sulfate of organic material from rat otoconial complexes A82-17482
Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal A82-17484
Human orientation in space
[AIAA PAPER 82-0422] A82-17940
OTOLOGY
Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid A82-16833
Temporal bone characteristics in Meniere's disease A82-17481
OUTGASSING
Shuttle toxicology N82-15726
OXYGEN CONSUMPTION
The physiological effect of low-air-pressure anoxia N82-15748
OXYGEN METABOLISM
Oxygen toxication N82-15751
OXYGEN SUPPLY EQUIPMENT
Check your oxygen --- oxygen supply equipment and aircraft safety A82-18736
OXYGEN TENSION
Oxygen tension in albino rat abdominal cavity organs in normo- and hyperoxybaria A82-16969

P

PAIN
New approaches to treatment of chronic pain: A review of multidisciplinary pain clinics and pain centers
[PB81-240913] N82-15778
PAINTS
An evaluation of engineering control technology for spray painting
[PB81-243123] N82-15789
PALEONTOLOGY
The mass extinctions of the late Mesozoic --- iridium abundance as geologic evidence for celestial body impact A82-17620
PARABOLIC FLIGHT
Ocular torsion on earth and in weightlessness A82-17435
PARAMETERIZATION
Methods for linking item parameters
[AD-A105509] N82-15779
PARTICLE DIFFUSION
Myocardial perfusion scintigraphy using a new technique, the mesh chamber
[DE81-027995] N82-15773
PARTICULATE SAMPLING
Carcinogenic effects of coal-conversion materials
[DE81-028108] N82-14803
PATHOGENESIS
Surgical treatment of recurrent frontal sinus barotrauma - A case report A82-18743
PATHOLOGICAL EFFECTS
Prevention of hypoxic heart damage by the use of oxypyridine-class antioxidants A82-16821
Morphology of experimental pneumoconiosis arising from the effects of lunar soil A82-16824
The effects of heat stress on the morphogenetic potencies of the nephron epithelium A82-16825
PATTERN RECOGNITION
Principles of feature integration in visual perception A82-16892
Is recognition accuracy really impaired when the target is repeated in the display A82-16893
PERFORMANCE TESTS
Methods for linking item parameters
[AD-A105509] N82-15779

**PERIODIC VARIATIONS**
The work capacity of sailors under conditions of varying work-rest cycles
A82-18524
**PERIPHERAL VISION**
Visual problems in aviation and space navigation
N82-15758
**PERSONNEL**
Problems in evaluating health effects of occupational and environmental exposures
[DE81-028440] N82-15774
**PERSONNEL SELECTION**
Vestibular tests in the selection of cosmonauts
A82-16941
**PHOSPHORUS METABOLISM**
The effects of immobilization stress on diacyl and plasmogenic phospholipids in various organs and tissues of the rat
A82-16802
**PHYSICAL EXAMINATIONS**
Evaluation of crew health
N82-15712
**PHYSICAL EXERCISE**
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests
A82-16167
Ion regulatory function of the human kidney in prolonged space flights
A82-16936
Characteristics of loading hypoxia
A82-16968
The role of physical training in the prevention of ischemic heart disease
A82-18525
**PHYSICAL FITNESS**
Effect of physical fitness and training on physiological responses to hypogravity
A82-16933
**PHYSICAL WORK**
Changes in Hageman factor system indicators during human adaptation to intense physical loading
A82-16816
The functional state of some subcortical cerebral structures during adaptation and deadaptation to physical loading
A82-16823
**PHYSIOCHEMISTRY**
Trends in space life support
A82-16953
Is transmission between the vestibular type I hair cell and its primary afferent chemical
A82-17444
**PHYSIOLOGICAL EFFECTS**
Concerning the rationalization of the work and rest schedule of cosmonauts
A82-16724
The response of the hematic system of adrenalectomized mice to stressor activity
A82-16814
Prevention of hypoxic heart damage by the use of oxypyridine-class antioxidants
A82-16821
Effects of disuse by limb immobilization on different muscle fiber types
A82-16830
Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid
A82-16833
Summary of medical investigations in the U.S.S.R. manned space missions
A82-16928
U.S. biological experiments in space
A82-16930
Current views and future programs in cardiovascular physiology in space
A82-16931
Effect of physical fitness and training on physiological responses to hypogravity
A82-16933
Hematological and immunological changes during space flight
A82-16937
Effects of the diet on brain function
A82-16942
Bone effects of space flight - Analysis by quantum concept of bone remodelling
A82-16947
Characteristics of loading hypoxia
A82-16968
The state of the air-blood barrier in hyperoxia
A82-16970
Some characteristics of thermal adaptation in small laboratory animals
A82-16971
Experimental biology and medicine in space

All-Union Conference on New Sources of Food Protein and Their Application N82-15765

PSYCHOLOGICAL FACTORS
Certain theoretical features of astronaut preparation A82-16705
Methodological principles of the investigation of pilot error A82-16709
The effects of hyperventilation on EEG alpha-rhythm depression induced by a suggested visual representation A82-16801

PSYCHOMETRICS
Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness A82-16723

PSYCHOPHYSICS
Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation A82-17449
Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics A82-17456

PSYCHOPHYSIOLOGY
The use of a psychophysiological feedback system for purposes of activity optimization A82-16706
Psychophysiological correlates of the control activity of the astronaut A82-16707
Problems of the control of operator state A82-16710
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man A82-16720
The effect of emotional stress on astronaut activity in a radio-telegraphy system A82-16722
Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness A82-16723
The activity of psychic models of hypogravity during 30-day experiments A82-16725
Psychophysiological safety control in long-duration space flights A82-16726
An investigation of memory during the process of adaptation to mountain conditions A82-17138
Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment A82-17144
Visually induced self-motion sensation adapts rapidly to left-right reversal of vision A82-17455
Acoustic-induced eye movements A82-17476

PSYCHOSOMATICS
Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness A82-16723

PULMONARY CIRCULATION
Simulation of human reactions under extreme conditions A82-16934
The state of the air-blood barrier in hyperoxia A82-16970
Northern pulmonary arterial hypertension A82-17143
Non-invasive pulmonary arterial pressure measurement [PB81-239410] N82-15776

PULMONARY FUNCTIONS
Pulmonary diffusing capacity under conditions of restricted motor activity A82-17140
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests [AD-A103766] N82-14797
Evaluation of short-term bioassays to predict functional impairment. development of pulmonary bioassays in small animals: Directory of Institutions; individuals involved in utilization [AD-A103767] N82-14798
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection [DE82-000507] N82-14799

PURSUIT TRACKING
Visual mossy fiber inputs to the flocculus of the monkey A82-17464

PYRIDINES
Prevention of hypoxic heart damage by the use of oxypyridine-class antioxidants A82-16821

R

RACKS (FRAMES)
Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1 [BMFT-FB-W-81-037] N82-15732

RADIATION DAMAGE
Ionizing radiation and its biological effects N82-15756

RADIATION DOSAGE
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection [DE82-000507] N82-14799
STS-1 medical report [NASA-TM-58240] N82-15711
Radiological health N82-15727
Ionizing radiation and its biological effects N82-15756
Problems in evaluating health effects of occupational and environmental exposures [DE81-028440] N82-15774

RADIATION EFFECTS
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments A82-16949
Repair of radiation damage in mammalian cells [DE81-030824] N82-14800
Field-ion-microscope observations of radiation effects [DE81-030934] N82-14802
Ionizing radiation and its biological effects N82-15756
Other biological effects of radiation N82-15757

RADIATION HAZARDS
Radiation - Risk and protection in manned space flight A82-16948
Problems in evaluating health effects of occupational and environmental exposures [DE81-028440] N82-15774

RADIATION MEASUREMENT
Problems in evaluating health effects of occupational and environmental exposures [DE81-028440] N82-15774

RADIATION MEASURING INSTRUMENTS
Myocardial perfusion scintigraphy using a new technique, the mesh chamber [DE81-027995] N82-15773

RADIATION MEDICINE
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory [DE81-029922] N82-15772

RADIATION PROTECTION
Radiation - Risk and protection in manned space flight A82-16948
Other biological effects of radiation N82-15757

**RADIATION SHIELDING**
Ionizing radiation and its biological effects
N82-15756

**RADIO TELEGRAPHY**
The effect of emotional stress on astronaut activity in a radio-telegraphy system
A82-16722

**RADIOBIOLOGY**
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments
A82-16949

**RADIOLOGY**
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment
[DE81-030168] N82-14801
Remote Medical Diagnosis System (RMDS) utilization study
[AD-A105559] N82-15771

**RECEPTORS (PHYSIOLOGY)**
Directional sensitivity of individual vertebrate hair cells to controlled deflection of their hair bundles --- in frog vestibules
A82-17427
Is transmission between the vestibular type I hair cell and its primary afferent chemical
A82-17444
Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457

**REDUCED GRAVITY**
The activity of psychic models of hypogravity during 30-day experiments
A82-16725
Summary of experiments onboard Soviet biosatellites
A82-16929
Effect of physical fitness and training on physiological responses to hypogravity
A82-16933
Nausogenic properties of various dynamic and static force environments --- in space
A82-16938

**REFLEXES**
Some thoughts about the three neurons in the vestibular ocular reflex
A82-17442
Unilateral habituation of vestibulo-ocular responses in the cat
A82-17454
Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes
A82-17458

**RENAL FUNCTION**
Ion regulatory function of the human kidney in prolonged space flights
A82-16936

**RESONANCE SCATTERING**
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

**RESPIRATION**
Carcinogenic effects of coal-conversion materials
[DE81-028108] N82-14803

**RESPIRATORY DISEASES**
Morphology of experimental pneumoconiosis arising from the effects of lunar soil
A82-16824

**RESPIRATORY PHYSIOLOGY**
The state of the air-blood barrier in hyperoxia
A82-16970
The circadian organization of the circulatory and respiratory systems of Antarctic workers
A82-17139

**RESPIRATORY SYSTEM**
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797

**RESUSCITATION**
Anesthesia, surgical aid and resuscitation in manned space missions
A82-16950

**RETINA**
Analysis of retinal work in the discrimination of a contour signal
A82-16819
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey
A82-17450

**RETINAL IMAGES**
Disappearance of stabilized chromatic gratings --- visual contrast sensitivity
A82-16125
Natural retinal image motion - Origin and change
A82-17452
Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457
Directional plasticity of the vestibulo-ocular reflex in the cat
A82-17467

**RHYTHM (BIOLOGY)**
Concerning the rationalization of the work and rest schedule of cosmonauts
A82-16724
The effects of hyperventilation on EEG alpha-rhythm depression induced by a suggested visual representation
A82-16801
The reorganization of EEG structure during adaptation to the Antarctic
A82-16810
Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment
A82-17144
The dynamics of cardiac rhythm parameters during work under various loads --- by air traffic controllers
A82-17146

**RIBONUCLEIC ACIDS**
Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids
[ISS-R-80/2-PT-1] N82-15734
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735

**ROBOTS**
Robot with sense of touch
A82-17133
Initiation into the utilization of programmable industrial robots: Grafcet --- graphic engineering language
N82-14805
Humanization of working places in the foundry by use of an automatic fettling equipment
[BMFT-FB-HA-81-004] N82-15781

**ROOT-MEAN-SQUARE ERRORS**
Estimating cell populations
A82-18684

**ROTATING ENVIRONMENTS**
Biomedical aspects of artificial gravity
A82-16951
Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes
A82-17458
Aftereffects of vestibular and optokinetic stimulation and their interaction
A82-17461

**ROTATION**
Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis
A82-17431
Effects of gravity on rotatory nystagmus in monkeys
A82-17432
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473

# S

**SACCADIC EYE MOVEMENTS**
Vestibular influence upon head-eye coordination
A82-17470
The interaction between accuracy of gaze with and without head movements in patients with cerebellar ataxia
A82-17472
Dissociation of the eyes in saccadic movement
A82-17479

- Different effects involved in the interaction of saccades and the vestibulo-ocular reflex A82-17480

**SALYUT SPACE STATION**
- USSR Space Life Sciences Digest [NASA-TM-84080] N82-15708

**SCINTILLATION**
- Myocardial perfusion scintigraphy using a new technique, the mesh chamber [DE81-027995] N82-15773

**SELF MANEUVERING UNITS**
- The design of extravehicular propulsion units A82-16716

**SEMICIRCULAR CANALS**
- Eye-muscle geometry and compensatory eye movements in lateral-eyed and frontal-eyed animals A82-17429
- Phasic components of frog semicircular canal A82-17430
- Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis A82-17431
- The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons A82-17437
- Nonlinear characteristics of single neurons in the vestibular nuclei A82-17438
- Human orientation in space [AIAA PAPER 82-0422] A82-17940

**SENSORIMOTOR PERFORMANCE**
- Pathophysiolcgy of motor functions in prolonged manned space flights A82-16945
- Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980 A82-17426
- Visually induced self-motion sensation adapts rapidly to left-right reversal of vision A82-17455

**SENSORY DISCRIMINATION**
- Study of the discrimination capacity of the auditory analyzer in flight personnel A82-18523

**SENSORY FEEDBACK**
- Motion sickness due to vision reversal - Its absence in stroboscopic light A82-17451

**SENSORY PERCEPTION**
- How important are changes in body weight for mass perception A82-16944
- Directional sensitivity of individual vertebrate hair cells to controlled deflection of their hair bundles --- in frog vestibules A82-17427
- Phasic components of frog semicircular canal A82-17430

**SENSORY STIMULATION**
- Effects of gravity on rotatory nystagmus in monkeys A82-17432
- Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys A82-17475

**SHIPS**
- The work capacity of sailors under conditions of varying work-rest cycles A82-18524
- Plan of action and milestones for Navy combustion toxicity [AD-A105623] N82-14796

**SHOCK (PHYSIOLOGY)**
- Free amino acid concentrations in the livers of animals subjected to certain extremal factors A82-18662

**SINUSES**
- Surgical treatment of recurrent frontal sinus barotrauma - A case report A82-18743

**SKIN TEMPERATURE (BIOLOGY)**
- The age characteristics of physical thermoregulation A82-16808

**SKYLAB PROGRAM**
- U.S. manned space flight: The first twenty years - A biomedical status report A82-16927

**SLEEP**
- The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man A82-16720

**SOUND PROPAGATION**
- Airborne ultrasound: Measurement and possible adverse effects [PB81-240459] N82-15775

**SOUND WAVES**
- Airborne ultrasound: Measurement and possible adverse effects [PB81-240459] N82-15775

**SPACE COLONIES**
- Human roles in future space operations A82-16955

**SPACE FLIGHT**
- The activity of psychic models of hypogravity during 30-day experiments A82-16725

**SPACE FLIGHT FEEDING**
- STS-1 medical report [NASA-TM-58240] N82-15711
- Food and nutrition N82-15724
- The potable water N82-15725
- Space navigation life guarantees N82-15759

**SPACE FLIGHT STRESS**
- Certain theoretical features of astronaut preparation A82-16705
- The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man A82-16720
- The effect of emotional stress on astronaut activity in a radio-telegraphy system A82-16722
- Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness A82-16723
- Concerning the rationalization of the work and rest schedule of cosmonauts A82-16724
- Psychophysiological safety control in long-duration space flights A82-16726
- Basic environmental problems of man in space; Proceedings of the Sixth International Symposium, Bonn, West Germany, November 3-6, 1980 A82-16926
- Summary of medical investigations in the U.S.S.R. manned space missions A82-16928
- Summary of experiments onboard Soviet biosatellites A82-16929
- Current views and future programs in cardiovascular physiology in space A82-16931
- An overview of the endocrine and metabolic changes in manned space flight A82-16935
- Ion regulatory function of the human kidney in prolonged space flights A82-16936
- Nausogenic properties of various dynamic and static force environments --- in space A82-16938
- Vestibular tests in the selection of cosmonauts A82-16941
- Bone effects of space flight - Analysis by quantum concept of bone remodelling A82-16947
- A compendium of hypokinetic and hypodynamic animal studies [NASA-CR-3485] N82-15709

**SPACE INDUSTRIALIZATION**
- Human roles in future space operations A82-16955

**SPACE MAINTENANCE**
- Simulation of operator activity in a system for the technical servicing of a space station A82-16717

SPACE MISSIONS
Summary of medical investigations in the U.S.S.R. manned space missions A82-16928
Coping with space motion sickness in Spacelab missions A82-16939
Anesthesia, surgical aid and resuscitation in manned space missions A82-16950

SPACE ORIENTATION
Determination of the angular orientation of the body of a walking machine A82-16288
Human orientation in space [AIAA PAPER 82-0422] A82-17940
How do we avoid confounding the direction we are looking and the direction we are moving A82-18024

SPACE PERCEPTION
Visual problems in aviation and space navigation N82-15758

SPACE SHUTTLE ORBITERS
Shuttle toxicology N82-15726

SPACE SHUTTLE PAYLOADS
Concept study of a life sciences payload element (PLE) for the SL-D1 mission [BMFT-FB-W-81-038] N82-15733

SPACE STATIONS
Simulation of operator activity in a system for the technical servicing of a space station A82-16717

SPACE SUITS
Space navigation life guarantees N82-15759

SPACE TRANSPORTATION SYSTEM 1 FLIGHT
STS-1 medical report [NASA-TM-58240] N82-15711
Evaluation of crew health N82-15712
Inflight observations N82-15713
Crew medical debriefing N82-15714
Health stabilization program N82-15715
Emergency Medical Services System (EMSS) N82-15716
Crew medical training N82-15717
Shuttle orbital medical system N82-15718
Validation of predictive tests and countermeasures for space motion sickness N82-15719
Crew cardiovascular profile N82-15720
Biochemistry and endocrinology results N82-15721
Hematological and immunological analyses N82-15722
Medical microbiology of crewmembers N82-15723
Food and nutrition N82-15724
The potable water N82-15725
Shuttle toxicology N82-15726
Radiological health N82-15727

SPACEBORNE EXPERIMENTS
U.S. biological experiments in space A82-16930
Future investigations onboard Soviet biosatellites of the Cosmos series A82-16954
Experimental biology and medicine in space A82-17123
Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1 [BMFT-FB-W-81-037] N82-15732
Concept study of a life sciences payload element (PLE) for the SL-D1 mission [BMFT-FB-W-81-038] N82-15733

SPACECRAFT CABIN ATMOSPHERES
STS-1 medical report [NASA-TM-58240] N82-15711
Medical microbiology of crewmembers N82-15723
Shuttle toxicology N82-15726
Cabin pollution N82-15760
Preprototype nitrogen supply subsystem development [NASA-CR-166192] N82-15780

SPACECRAFT CABINS
Dangers of explosive decompression N82-15750

SPACECRAFT COMMUNICATION
Investigation of the functions of an astronaut operator in information systems A82-16721

SPACECRAFT CONTAMINATION
Shuttle toxicology N82-15726

SPACECRAFT CONTROL
Basic principles and methods for assuring the eficiency of astronaut activity in flight A82-16702
Psychophysiological correlates of the control activity of the astronaut A82-16707
Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria A82-16711
Investigation of the statistical characteristics of astronaut operator activity directed towards the control of a manned spacecraft A82-16712

SPACECRAFT ENVIRONMENTS
Environmental conditions of aviation and space navigation N82-15738
The relationship of body temperature to environmental temperature N82-15752
Space navigation life guarantees N82-15759

SPACECRAFT MODELS
Simulation of operator activity in a system for the technical servicing of a space station A82-16717

SPACECRAFT TRACKING
The effects of a light blue background on the operator visual analyzer A82-16727

SPACECREWS
Hematological and immunological changes during space flight A82-16937
Coping with space motion sickness in Spacelab missions A82-16939
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments A82-16949
STS-1 medical report [NASA-TM-58240] N82-15711
Evaluation of crew health N82-15712
Inflight observations N82-15713
Crew medical debriefing N82-15714
Health stabilization program N82-15715
Crew medical training N82-15717
Validation of predictive tests and countermeasures for space motion sickness N82-15719
Crew cardiovascular profile N82-15720
Biochemistry and endocrinology results N82-15721
Hematological and immunological analyses N82-15722
Medical microbiology of crewmembers N82-15723
Radiological health N82-15727

SPACELAB
  Coping with space motion sickness in Spacelab missions
  A82-16939

SPACELAB PAYLOADS
  Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1
  [BMFT-FB-W-81-037] N82-15732
  Concept study of a life sciences payload element (PLE) for the SL-D1 mission
  [BMFT-FB-W-81-038] N82-15733

SPECTROPHOTOMETRY
  Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids
  [ISS-R-80/2-PT-1] N82-15734
  Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
  [ISS-R-80/3-PT-2] N82-15735

SPECTROSCOPIC ANALYSIS
  Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids
  [ISS-R-80/2-PT-1] N82-15734
  Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
  [ISS-R-80/3-PT-2] N82-15735

SPLEEN
  Hepato-splenic injury in aircraft accidents
  A82-18735

SPRAYED COATINGS
  An evaluation of engineering control technology for spray painting
  [PB81-243123] N82-15789

STREPTOCOCCUS
  Effect of altitude exposure on induction of Streptococcal endocarditis in young and middle-aged rats
  A82-18740

STRESS (BIOLOGY)
  The effects of immobilization on the development of experimental atherosclerosis in rabbits
  A82-16815
  Biogenic monoamine concentrations in autonomic nervous system ganglia during acute experimental emotional stress
  A82-16817
  The effects of heat stress on the morphogenetic potencies of the nephron epithelium
  A82-16825

STRESS (PHYSIOLOGY)
  The effects of immobilization stress on diacyl and plasmogenic phospholipids in various organs and tissues of the rat
  A82-16802
  The response of the hematic system of adrenalectomized mice to stressor activity
  A82-16814
  Damage and repair of heart muscle DNA during emotional-pain stress
  A82-16822
  Characteristics of loading hypoxia
  A82-16968
  Free amino acid concentrations in the livers of animals subjected to certain extremal factors
  A82-18662
  Recent life change measurement in Canadian Forces pilots
  A82-18733

STRESS (PSYCHOLOGY)
  Damage and repair of heart muscle DNA during emotional-pain stress
  A82-16822
  Informational need of emotional stress --- effect on operator performance of visual tasks
  A82-16943
  Recent life change measurement in Canadian Forces pilots
  A82-18733

STROBOSCOPES
  Motion sickness due to vision reversal - Its absence in stroboscopic light
  A82-17451

SUBMERGING
  Investigation of astronaut activity under conditions of the hydrosimulation of weightlessness
  A82-16713

SULFATES
  Microdisc gel electrophoresis in sodium dodecyl sulfate of organic material from rat otoconial complexes
  A82-17482

SURFACE FINISHING
  An evaluation of engineering control technology for spray painting
  [PB81-243123] N82-15789

SURGERY
  Anesthesia, surgical aid and resuscitation in manned space missions
  A82-16950
  Surgical treatment of recurrent frontal sinus barotrauma - A case report
  A82-18743

SYNAPSES
  Is transmission between the vestibular type I hair cell and its primary afferent chemical
  A82-17444
  Piribedil-induced anti-hypoxic protection in rats
  A82-18738

SYNTHETIC FOOD
  All-Union Conference on New Sources of Food Protein and Their Application
  N82-15765

SYNTHETIC FUELS
  Carcinogenic effects of coal-conversion materials
  [DE81-028108] N82-14803

SYSTEMS ENGINEERING
  Initiation into the utilization of programmable industrial robots: Grafcet --- graphic engineering language
  N82-14805

SYSTOLE
  Measurement of systolic time intervals by electrical plethysmography Validation with invasive and noninvasive methods
  A82-18742

T

TARGET RECOGNITION
  Is recognition accuracy really impaired when the target is repeated in the display
  A82-16893

TARS
  Carcinogenic effects of coal-conversion materials
  [DE81-028108] N82-14803

TASK COMPLEXITY
  Effects of task feedback and stringency of external pacing on mental load and work performance
  A82-18325
  Simulator data on human error probabilities
  [DE81-026094] N82-15786

TECHNOLOGY UTILIZATION
  NASA biomedical applications team. Applications of aerospace technology in biology and medicine
  [NASA-CR-152663] N82-15710
  Applications of aerospace technology in biology and medicine
  [NASA-CR-159106] N82-15769

TELEVISION SYSTEMS
  Experimental study of the characteristics of the detection of objects on a TV display by an operator under conditions of time deficit
  A82-16714
  Use of a television multipoint x-y tracker for determining the transmission of vibrations on human beings --- human factors in man machine systems
  N82-15787

TEMPERATURE CONTROL
  Comfortable temperature and tolerable temperature
  N82-15753

TEMPERATURE DEPENDENCE
  The relationship of body temperature to environmental temperature
  N82-15752

TEMPERATURE EFFECTS
  The effects of heat stress on the morphogenetic potencies of the nephron epithelium
  A82-16825

The relationship of body temperature to environmental temperature N82-15752

**TERMINAL CONFIGURED VEHICLE PROGRAM**
Influence of display and control compatibility on pilot-induced oscillations [NASA-TP-1936] N82-14804

**THALLIUM ISOTOPES**
Computer-enhanced thallium scintigrams in asymptomatic men with abnormal exercise tests A82-16167

**THERMAL CONDUCTIVITY**
A heat transfer analysis of scald injury [PB81-238503] N82-15777

**THERMAL INSULATION**
A criterion for the disposal of M58 sleeping bags [IZF-1979-15] N82-15782

**THERMOREGULATION**
The age characteristics of physical thermoregulation A82-16808
Some characteristics of thermal adaptation in small laboratory animals A82-16971

**THREE DIMENSIONAL MOTION**
Robot with sense of touch A82-17133

**THYMIDINE**
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia [NASA-TM-76515] N82-14794

**TIME MEASUREMENT**
Measurement of systolic time intervals by electrical plethysmography Validation with invasive and noninvasive methods A82-18742

**TISSUES (BIOLOGY)**
Inborn anemias in mice [DE81-029128] N82-14795

**TOMOGRAPHY**
Temporal bone characteristics in Meniere's disease A82-17481
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment [DE81-030168] N82-14801

**TORSION**
Ocular torsion on earth and in weightlessness A82-17435

**TOUCH**
Robot with sense of touch A82-17133

**TOXIC DISEASES**
Caisson disease N82-15749
Oxygen toxication N82-15751

**TOXIC HAZARDS**
Extra-erythrocytic hemoglobin and iron-bearing hemoglobin destruction products - A system for the amplification of the toxic effects of hyperoxia A82-16803
Plan of action and milestones for Navy combustion toxicity [AD-A105623] N82-14796
The physiological effect of low-air-pressure anoxia N82-15748

**TOXICITY**
Plan of action and milestones for Navy combustion toxicity [AD-A105623] N82-14796
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests [AD-A103766] N82-14797

**TOXICITY AND SAFETY HAZARD**
Evaluation of short-term bioassays to predict functional impairment. development of pulmonary bioassays in small animals: Directory of Institutions; individuals involved in utilization [AD-A103767] N82-14798

**TOXICOLOGY**
Shuttle toxicology N82-15726

**TOXINS AND ANTITOXINS**
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment A82-17441

**TRACE ELEMENTS**
Changes in blood indicators upon the inclusion of trace elements in the diet A82-16274

**TRACERS**
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment A82-17441

**TRACKED VEHICLES**
The Link-Miles driver training simulator for tracked vehicles: Influence of cabin motion on gear-change learning [IZF-1980-24] N82-15785

**TRACKING (POSITION)**
Acoustic-induced eye movements A82-17476

**TRAINING SIMULATORS**
The Link-Miles driver training simulator for tracked vehicles: Influence of cabin motion on gear-change learning [IZF-1980-24] N82-15785

## U

**U.S.S.R.**
USSR report: Life sciences biomedical and behavioral sciences, no. 13 [JPRS-79639] N82-15763

**U.S.S.R. SPACE PROGRAM**
Summary of medical investigations in the U.S.S.R. manned space missions A82-16928

**ULTRASONIC RADIATION**
Airborne ultrasound: Measurement and possible adverse effects [PB81-240459] N82-15775

**ULTRAVIOLET SPECTROMETERS**
Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotometry of nuclei acids [ISS-R-80/2-PT-1] N82-15734

**URINE**
The effect of acetazolamide on the proteinuria of altitude A82-18739

## V

**VERTICAL MOTION SIMULATORS**
Influence of display and control compatibility on pilot-induced oscillations [NASA-TP-1936] N82-14804

**VERTICAL PERCEPTION**
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements A82-17462
Human vertical fusional response under open and closed loop stimulation to predictable and unpredictable disparity presentations A82-17571

**VERTIGO**
Flight illusions N82-15745

**VESTIBULAR NYSTAGMUS**
The differential diagnosis of an asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions A82-16813
Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980 A82-17426
Physiological mechanisms of the nystagmus produced by rotations about an earth-horizontal axis A82-17431
Effects of gravity on rotatory nystagmus in monkeys A82-17432
Cat medial pontine neurons in vestibular nystagmus A82-17443
Vestibular habituation in man and monkey during sinusoidal rotation A82-17453
Input-output activity of the primate flocculus during visual-vestibular interaction A82-17466
Directional plasticity of the vestibulo-ocular reflex in the cat A82-17467

The 'Error' signals subserving adaptive gain control in the primate vestibulo-ocular reflex
A82-17468

Active head rotations and eye-head coordination
A82-17469

Vestibular influence upon head-eye coordination
A82-17470

A hypothetical explanation for periodic alternating nystagmus - Instability in the optokinetic-vestibular system
A82-17474

Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets
A82-17477

Different effects involved in the interaction of saccades and the vestibulo-ocular reflex
A82-17480

VESTIBULAR TESTS

The differential diagnosis of an asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions
A82-16813

U.S. manned space flight: The first twenty years - A biomedical status report
A82-16927

Status of vestibular function after prolonged bedrest
A82-16940

Vestibular tests in the selection of cosmonauts
A82-16941

Neuronal interaction between ipsilateral medial and lateral vestibular nuclei
A82-17436

The ascending tract of Deiters' and horizontal gaze --- maintenance during head movement via neurons
A82-17437

Nonlinear characteristics of single neurons in the vestibular nuclei
A82-17438

Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation
A82-17449

Vestibular habituation in man and monkey during sinusoidal rotation
A82-17453

The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements
A82-17462

Input-output activity of the primate flocculus during visual-vestibular interaction
A82-17466

Effect of frontal-eye-field lesion on eye-head coordination in squirrel monkeys
A82-17475

Validation of predictive tests and countermeasures for space motion sickness
N82-15719

VESTIBULES

Reissner's membrane and the spiral ligament in normal rats and those treated with ethacrynic acid
A82-16833

Directional sensitivity of individual vertebrate hair cells to controlled deflection of their hair bundles --- in frog vestibules
A82-17427

Phasic components of frog semicircular canal
A82-17430

Reticulovestibular organization participating in generation of horizontal fast eye movement
A82-17439

Horizontal eye movement signals in second-order vestibular nuclei neurons in the cat
A82-17440

Some thoughts about the three neurons in the vestibular ocular reflex
A82-17442

Is transmission between the vestibular type I hair cell and its primary afferent chemical
A82-17444

Visual-vestibular interaction in vestibular neurons - Functional pathway organization
A82-17446

Neural activity in the nucleus reticularis tegmenti pontis in the monkey related to eye movements and visual stimulation
A82-17447

Visual-vestibular interactions in visual cortical cells in the cat
A82-17448

Natural retinal image motion - Origin and change
A82-17452

Unilateral habituation of vestibulo-ocular responses in the cat
A82-17454

Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics
A82-17456

Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457

Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes
A82-17458

Aftereffects of vestibular and optokinetic stimulation and their interaction
A82-17461

VIBRATION

Human body reaction to vibration
N82-15743

VIRUSES

Conference on plant virology
N82-15767

VISUAL ACCOMMODATION

Motion sickness due to vision reversal - Its absence in stroboscopic light
A82-17451

VISUAL DISCRIMINATION

Disappearance of stabilized chromatic gratings --- visual contrast sensitivity
A82-16125

Analysis of retinal work in the discrimination of a contour signal
A82-16819

Visual problems in aviation and space navigation
N82-15758

VISUAL FIELDS

The effects of a light blue background on the operator visual analyzer
A82-16727

VISUAL PERCEPTION

Certain aspects of the visual activity of astronauts
A82-16708

The effects of a light blue background on the operator visual analyzer
A82-16727

Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object
A82-16807

Model for the perception of moving and fixed objects
A82-16820

Principles of feature integration in visual perception
A82-16892

Visual-vestibular interaction in vestibular neurons - Functional pathway organization
A82-17446

Visual-vestibular interactions in visual cortical cells in the cat
A82-17448

Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey
A82-17450

Visually induced self-motion sensation adapts rapidly to left-right reversal of vision
A82-17455

Velocity storage, nystagmus, and visual-vestibular interactions in humans
A82-17460

Aftereffects of vestibular and optokinetic stimulation and their interaction
A82-17461

The brain-stem projection to the cerebellar flocculus relevant to optokinetic responses in cats
A82-17463

Visual mossy fiber inputs to the flocculus of the monkey
A82-17464

Mossy fiber activation of the cerebellar flocculus from the visual system
A82-17465
Dissociation of the eyes in saccadic movement
A82-17479
Visual scanning behavior and mental workload in aircraft pilots
A82-18741
Flight illusions
N82-15745
Visual problems in aviation and space navigation
N82-15758
**VISUAL SIGNALS**
Analysis of retinal work in the discrimination of a contour signal
A82-16819
Visual mossy fiber inputs to the flocculus of the monkey
A82-17464
**VISUAL STIMULI**
The effects of hyperventilation on EEG alpha-rhythm depression induced by a suggested visual representation
A82-16801
Principles of feature integration in visual perception
A82-16892
Circularvection - Psychophysics and single-unit recordings in the monkey --- vestibular effects of rotation
A82-17449
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey
A82-17450
Motion sickness due to vision reversal - Its absence in stroboscopic light
A82-17451
Early directional influence of visual motion cues on postural control in the falling monkey
A82-17459
The interaction between accuracy of gaze with and without head movements in patients with cerebellar ataxia
A82-17472
Modifications of vestibular nystagmus produced by fixation of visual and nonvisual targets
A82-17477
Dipole localization of average and single visual evoked potentials
A82-17570
Human vertical fusional response under open and closed loop stimulation to predictable and unpredictable disparity presentations
A82-17571
How do we avoid confounding the direction we are looking and the direction we are moving
A82-18024
**VISUAL TASKS**
Experimental study of the characteristics of the detection of objects on a TV display by an operator under conditions of time deficit
A82-16714
Informational need of emotional stress --- effect on operator performance of visual tasks
A82-16943
**VOICE COMMUNICATION**
Investigation of the functions of an astronaut operator in information systems
A82-16721

W

**WALKING MACHINES**
Determination of the angular orientation of the body of a walking machine
A82-16288
**WASTE DISPOSAL**
Space navigation life guarantees
N82-15759
Cabin pollution
N82-15760
**WASTE TREATMENT**
Trends in space life support
A82-16953
**WATER LOSS**
Caisson disease
N82-15749
**WEAR TESTS**
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[ASLE PREPRINT 81-LC-2D-1]
A82-18402
**WEIGHT MEASUREMENT**
How important are changes in body weight for mass perception
A82-16944
**WEIGHTLESSNESS**
Comparative psychophysiological evaluation of the effectiveness of psychic models of body hypo- and hyperponderousness
A82-16723
The activity of psychic models of hypogravity during 30-day experiments
A82-16725
Simulation of human reactions under extreme conditions
A82-16934
Status of vestibular function after prolonged bedrest
A82-16940
Pathophysiology of motor functions in prolonged manned space flights
A82-16945
Ocular torsion on earth and in weightlessness
A82-17435
A compendium of hypokinetic and hypodynamic animal studies
[NASA-CR-3485]
N82-15709
The effects of rotation and oscillation: Aerial sickness
N82-15744
Man's adaptation to weightlessness and low weight
N82-15746
**WEIGHTLESSNESS SIMULATION**
Investigation of astronaut activity under conditions of the hydrosimulation of weightlessness
A82-16713
**WORK CAPACITY**
Simulation of operator activity in a system for the technical servicing of a space station
A82-16717
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man
A82-16720
Psychophysiological safety control in long-duration space flights
A82-16726
Changes in Hageman factor system indicators during human adaptation to intense physical loading
A82-16816
The work capacity of sailors under conditions of varying work-rest cycles
A82-18524
**WORK-REST CYCLE**
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man
A82-16720
Concerning the rationalization of the work and rest schedule of cosmonauts
A82-16724
The work capacity of sailors under conditions of varying work-rest cycles
A82-18524
**WORKLOADS (PSYCHOPHYSIOLOGY)**
Current problems in the psychophysiology of space work /status and future prospects/
A82-16703
The functional state of some subcortical cerebral structures during adaptation and deadaptation to physical loading
A82-16823
The effects of operator activity on the diurnal rhythm of physiological functions
A82-17142
The dynamics of cardiac rhythm parameters during work under various loads --- by air traffic controllers
A82-17146
Effects of task feedback and stringency of external pacing on mental load and work performance
A82-18325

Visual scanning behavior and mental workload in aircraft pilots
A82-18741

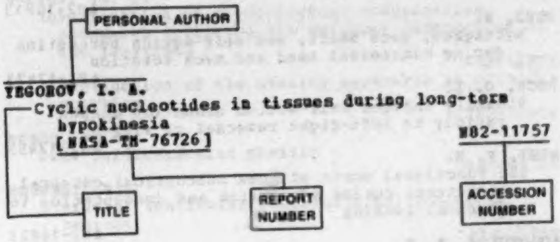
X

X RAY ANALYSIS
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment
[DE81-030168] N82-14801
X RAY FLUORESCENCE
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory
[DE81-029922] N82-15772

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY/*A Continuing Bibliography (Suppl. 231)* APRIL 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABDIKALIEV, B. A.**
Prevention of hypoxic heart damage by the use of oxypyridine-class antioxidants
A82-16821

**ABE, M.**
Effect of physical fitness and training on physiological responses to hypogravity
A82-16933

**ADAMEC, S.**
Simulation of human reactions under extreme conditions
A82-16934

**ADLER, B.**
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey
A82-17450

**ADLER, R. H.**
Plan of action and milestones for Navy combustion toxicity
[AD-A105623]
N82-14796

**AGADZHANIAN, N. A.**
Pulmonary diffusing capacity under conditions of restricted motor activity
A82-17140

**AKERT, K.**
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment
A82-17441

**ALAVERDIAN, A. M.**
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes
A82-17145

**ALEINIKOV, IU. P.**
Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object
A82-16807

**ALEINIKOVA, T. V.**
Possible model representations of the neurophysiological mechanisms for the analysis of the direction and speed of a moving visual object
A82-16807

**ALTLAND, P. D.**
Effect of altitude exposure on induction of Streptococcal endocarditis in young and middle-aged rats
A82-18740

**ANDERSON, J. H.**
Ocular torsion in the cat after lesions of the interstitial nucleus of Cajal
A82-17484

**ANESTIADI, N. IA.**
Free amino acid concentrations in the livers of animals subjected to certain extremal factors
A82-18662

**ARACO, A.**
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2]
N82-15735

**ARAI, Y.**
Disturbances of eye-head coordination during lateral gaze in labyrinthine disease
A82-17471

**ARROTT, A. P.**
Ocular torsion on earth and in weightlessness
A82-17435

**ARTISHCHUK, V. N.**
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man
A82-16720

**ARUTIUNOV, V. D.**
Morphology of experimental pneumoconiosis arising from the effects of lunar soil
A82-16824

**ASTRAUSKAS, A. I.**
Trial of an automated EKG analysis system in a cardiological clinic
A82-16804

**AUNON, J. I.**
Dipole localization of average and single visual evoked potentials
A82-17570

**AXELROD, P. T.**
A compendium of hypokinetic and hypodynamic animal studies
[NASA-CR-3485]
N82-15709

## B

**BABIN, R. W.**
Nonlinear characteristics of single neurons in the vestibular nuclei
A82-17438

**BAKER, R.**
Some thoughts about the three neurons in the vestibular ocular reflex
A82-17442

**BAKHAREV, V. D.**
An investigation of memory during the process of adaptation to mountain conditions
A82-17138

**BARATOVA, L. A.**
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes
A82-17145

**BARIN, K.**
A physical model of human postural dynamics
A82-17478

**BARKER, J. E.**
Inborn anemias in mice
[DE81-029128]
N82-14795

**BARNES, C. M.**
Radiological health
N82-15727

**BARNES, G. R.**
Vestibular influence upon head-eye coordination
A82-17470

BAHRS, D. M.
Surgical treatment of recurrent frontal sinus barotrauma - A case report
A82-18743
BASAKIN, V. I.
The age characteristics of physical thermoregulation
A82-16808
BATSURA, IU. D.
Morphology of experimental pneumoconiosis arising from the effects of lunar soil
A82-16824
BAUR, R.
Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1
[BMFT-FB-W-81-037] N82-15732
BEADLES, R.
NASA biomedical applications team. Applications of aerospace technology in biology and medicine
[NASA-CR-152663] N82-15710
BEADLES, R. L.
Applications of aerospace technology in biology and medicine
[NASA-CR-159106] N82-15769
BEALL, H. C.
NASA biomedical applications team. Applications of aerospace technology in biology and medicine
[NASA-CR-152663] N82-15710
Applications of aerospace technology in biology and medicine
[NASA-CR-159106] N82-15769
BECKER, W.
Patterns of vestibular and neck responses and their interaction - A comparison between cat cortical neurons and human psychophysics
A82-17456
Different effects involved in the interaction of saccades and the vestibulo-ocular reflex
A82-17460
BELIAKOVA, L. A.
The dynamics of cardiac rhythm parameters during work under various loads
A82-17146
BELIANOVA, L. P.
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes
A82-17145
BELLI, M.
Spectrophotometric studies on the RNA structure in E.coli ribosomes. Part 1: Fundamentals of ultraviolet spectrophotcmetry of nuclei acids
[ISS-R-80/2-PT-1] N82-15734
Spectrophotometric studies of the RNA structure in E.coli ribosomes. Part 2: Influence of ions and proteins on the RNA secondary structure
[ISS-R-80/3-PT-2] N82-15735
BEREGOVOI, G. T.
Astronaut activity in flight and enhancement of its efficiency
A82-16701
Basic principles and methods for assuring the eficiency of astronaut activity in flight
A82-16702
Certain theoretical features of astronaut preparation
A82-16705
Optimization of astronaut operator activity and systems of semiautomatic control of manned spacecraft on the basis of probabilistic criteria
A82-16711
BERNSTEIN, S. E.
Inborn anemias in mice
[DE81-029128] N82-14795
BERRY, C. A.
Inflight observations
N82-15713
BERTHOZ, A.
Horizontal eye movement signals in second-order vestibular nuclei neurons in the cat
A82-17440
BEVERLEY, K. I.
How do we avoid confounding the direction we are looking and the direction we are moving
A82-18024
BILOTTO, G.
Dynamics of vestibulo-ocular, vestibulocollic, and cervicocollic reflexes
A82-17458
BITZER, K. L.
Feasibility study (phase A) for a Life Science Double Rack envisaged for the Spacelab mission D1
[BMFT-FB-W-81-037] N82-15732
BIZZINI, B.
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment
A82-17441
BLAGOVESHCHENSKAIA, N. S.
The differential diagnosis of an asymmetrical trend in vestibular responses in peripheral and central hemispheric lesions
A82-16813
BLES, W.
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473
BOCK, O. L.
Visually induced self-motion sensation adapts rapidly to left-right reversal of vision
A82-17455
BOEV, V. M.
The functional state of some subcortical cerebral structures during adaptation and deadaptation to physical loading
A82-16823
BOGOMOLOV, V. V.
Anesthesia, surgical aid and resuscitation in manned space missions
A82-16950
BOISMARE, F.
Piribedil-induced anti-hypoxic protection in rats
A82-18738
BOLLE, H. H.
Humanization of working places in the foundry by use of an automatic fettling equipment
[BMFT-FB-HA-81-004] N82-15781
BONDE-PETERSEN, F.
Cardiovascular reflexes during rest and exercise modified by gravitational stresses
A82-16932
BOOTH, F. W.
Effects of disuse by limb immobilization on different muscle fiber types
A82-16830
BOVENKERK, G.
Nystagmus, gaze shift, and self-motion perception during sinusoidal head and neck rotation
A82-17473
BOYLE, R.
Responses of vestibulospinal neurons to neck and macular vestibular inputs in the presence or absence of the paleocerebellum
A82-17457
BRADWELL, A. R.
The effect of acetazolamide on the proteinuria of altitude
A82-18739
BRECHA, N. C.
Organization of the avian accessory optic system
A82-17445
BRENDBERG, G.
The function of the endolymphatic duct - An experimental study using ionic lanthanum as a tracer: A preliminary report
A82-17428
BRODSKII, V. Y.
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794
BROUILLET, A. O.
Trends in space life support
A82-16953
BROWN, J. N., JR.
NASA biomedical applications team. Applications of aerospace technology in biology and medicine
[NASA-CR-152663] N82-15710
Applications of aerospace technology in biology and medicine
[NASA-CR-159106] N82-15769
BUECKER, H.
The role of HZE particles in space flight - Results from spaceflight and ground-based experiments
A82-16949

**BUETTNER-ENNEVER, J. A.**
A transsynaptic autoradiographic study of the pathways controlling the extraocular eye muscles, using /I-124/B-IIb Tetanus toxin fragment A82-17441

**BUETTNER, U.**
Circularvection - Psychophysics and single-unit recordings in the monkey A82-17449
Input-output activity of the primate flocculus during visual-vestibular interaction A82-17466

**BULAEV, IU. O.**
Investigation of physiological compensation processes following the surgical destruction of the labyrinth A82-16811
Investigation of the otolith apparatus in clinical practice A82-16812

**BUNGO, M. W.**
Crew cardiovascular profile N82-15720

**BURGEAT, M.**
Status of vestibular function after prolonged bedrest A82-16940

**BURKASHOV, A. B.**
The effects of bicycle ergometer exercise on plasma amino acid contents in athletes A82-17145

## C

**CASTLEMAN, K. R.**
Estimating cell populations A82-18684

**CETTL, L.**
Simulation of human reactions under extreme conditions A82-16934

**CHAPAEV, A. V.**
The influence of certain habitation conditions on the physiological functions, work capacity, and dream dynamics of man A82-16720

**CHEBAKOV, V. P.**
Characteristics of indicators of cardiac rhythm in the norm and in mental maladjustment A82-17144

**CHEPAITIS, ZH. V.**
Experience with the development and application of telemetric computing systems in cardiology A82-16806

**CHERENKOVA, E. A.**
Investigation of the functions of an astronaut operator in information systems A82-16721

**CHERNUKH, A. M.**
Changes in Hageman factor system indicators during human adaptation to intense physical loading A82-16816

**CHRETIEN, P.**
Piribedil-induced anti-hypoxic protection in rats A82-18738

**CHUBB, M. C.**
The role of the dentate nucleus and y-group in the generation of vertical smooth eye movements A82-17462

**CLEMENT, G.**
Unilateral habituation of vestibulo-ocular responses in the cat A82-17454

**CLINGMAN, W. H.**
NASA biomedical applications team. Applications of aerospace technology in biology and medicine [NASA-CR-152663] N82-15710
Applications of aerospace technology in biology and medicine [NASA-CR-159106] N82-15769

**COGOLI, A.**
Hematological and immunological changes during space flight A82-16937

**COHEN, B.**
Vestibular and oculomotor physiology; Proceedings of the International Meeting, New York, NY, September 22-25, 1980 A82-17426
Effects of gravity on rotatory nystagmus in monkeys A82-17432
Velocity storage, nystagmus, and visual-vestibular interactions in humans A82-17460

**COHN, S. H.**
Applications of nuclear techniques for in vivo body composition studies at Brookhaven National Laboratory [DE81-029922] N82-15772

**COLIN, J.**
Measurement of systolic time intervals by electrical plethysmography Validation with invasive and noninvasive methods A82-18742

**COLL, J.**
Status of vestibular function after prolonged bedrest A82-16940

**COLLEWIJN, H.**
Sigma-movement and Sigma-nystagmus - A new tool to investigate the gaze-pursuit system and visual-movement perception in man and monkey A82-17450
Natural retinal image motion - Origin and change A82-17452

**COURJON, J. H.**
Unilateral habituation of vestibulo-ocular responses in the cat A82-17454

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley

**COLORADO**
University of Colorado, Boulder

**DISTRICT OF COLUMBIA**
Library of Congress

**GEORGIA**

Fort Worth Public Library

**WASHINGTON**
Seattle Public Library

**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

7

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 437 reports, articles and other documents announced during April 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

**Avail:** DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

**Avail:** Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

**Avail:** USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

**Avail:** HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

**Avail:** BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

**Avail:** Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

**Avail:** Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

**Avail:** U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

**Other availabilities:** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11687 #** **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal,* Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

*A Continuing Bibliography (Suppl. 232)*

MAY 1982

## IAA ENTRIES

**A82-18872** † **The healthy and the diseased human brain (Zdorovyi i bol'noi mozg cheloveka).** *N. P. Bekhtereva.* Leningrad, Izdatel'stvo Nauka, 1980. 208 p. 357 refs. In Russian.

Conceptions of the physiological characteristics and interactions of the human brain are discussed based on experimental and observational data obtained over nearly two decades. Current principles and capabilities in the study of the human brain are considered, including electroencephalography, electrical stimulation and pharmacological tests, and general principles of human brain organization are reviewed particularly as regards long-term memory and the maintenance of mental activity. The impact of illness on general brain mechanisms is considered, along with the relation of brain mechanisms to the neurophysiology of the psyche in areas such as phoneme and word handling and the thinking process. Attention is also given to the neurophysiology of human memory and its electrical stimulation, and to the present and past development of human neurophysiology. A.L.W.

**A82-18877** † **Biped walking - Model problems of dynamics and control (Dvunogaia khod'ba - Model'nye zadachi dinamiki i upravleniia).** V. V. Beletskii. In: Motion stability. Analytical mechanics. Motion control. Moscow, Izdatel'stvo Nauka, 1981, p. 28-41. 16 refs. In Russian.

The literature on biped walking is reviewed with emphasis on the work of Beletskii and his colleagues. Particular consideration is given to the method of prescribed synergy, compensating oscillations, parametric optimization of the walking process, angular stabilization, stabilization algorithms, and the problem of underwater walking. B.J.

**A82-18988** † **Development of an integrated walking robot (Razrabotka integral'nogo shagaiushchego robota).** D. E. Okhotsimskii, A. K. Platonov, V. S. Gurfinkel', and E. A. Devianin. In: Motion stability. Analytical mechanics. Motion control. Moscow, Izdatel'stvo Nauka, 1981, p. 223-238. 30 refs. In Russian.

The basic principles of the functional organization of an integrated walking robot are reviewed. Attention is given to problems of motion design, the mathematical modeling of robot motion, and the development of laboratory models. B.J.

**A82-19000** **Psychological problems in the mutual adaptation of man and machine in control systems (Psikhologicheskie problemy vzaimnoi adaptatsii cheloveka i mashiny v sistemakh upravleniia).** Edited by B. F. Lomov, V. F. Venda, and Iu. M. Zabrodin. Moscow, Izdatel'stvo Nauka, 1980. 320 p. In Russian.

A systems theory and methodology is developed concerning the mutual, reciprocal adaptation of man and machine so as to optimize the informational interaction between them. Following a review of current psychological problems in the man-machine system, an approach to system optimization based on the mutual adaptation of man and machine is established. Attention is then given to the construction and modeling of processes of multilevel mutual adaptation of man and machine, and to psychological methods for the adaptation of specific man-machine systems. Methods for the modeling and optimization of adaptive man-machine systems, including autonomic-type systems and systems operating under critical conditions and based on idealized strategies for operative problems are examined, and the application of the concept of mutual adaptation between man and machine to operator training is considered. A.L.W.

**A82-19012** **Physical and physiological features of long-range flight and its impact on patients (Physikalische und physiologische Besonderheiten des Langstreckenfluges und seine Auswirkungen auf den Patienten).** K. Grossmann (Akademie des Sanitäts- und Gesundheitswesens der Bundeswehr, Munich, West Germany). In: Aeromedical evacuation: Results, analysis, developments; International Aeromedical Evacuation Congress, 1st, Munich, West Germany, September 16-19, 1980, Reports. Munich, Allgemeiner Deutscher Automobil-Club, 1981, p. 152-162. In German.

Adverse effects on patients caused by long-range flights in ambulance aircraft are presented. Various types of acceleration and deceleration at takeoff and landing are discussed in relation to the possible adverse effects on respiratory patients. The effects of noise, temperature and aircraft humidity on patients are presented, and the optimal temperature is found to be 20-24 C, with an optimal aircraft humidity of 35%. The effects of spin, ozone, cosmic rays and changes in time zone are also discussed. D.L.G.

**A82-19014** **The reliability of flight personnel during the operation of the Mi-4 helicopter.** Y. G. Zorbas (European Institute of Environmental Cybernetics, Athens, Greece). In: Aeromedical evacuation: Results, analysis, developments; International Aeromedical Evacuation Congress, 1st, Munich, West Germany, September 16-19, 1980, Reports. Munich, Allgemeiner Deutscher Automobil-Club, 1981, p. 177-180.

The effect of vibration and noise of an Mi-4 helicopter on the reliability of the flight personnel was examined. A study group composed of 58 Mi-4 flight personnel was divided into work-related groups which were tested for simple motor reactions, reactions to a moving object, the critical frequency of flicker fusion, the capacity for fine coordination of movements, and the reproducibility of muscular exertion. The tests were applied before and after flights for one month, and the results were compared with results from similar tests carried out on a control group manning a helicopter which had low noise and vibration levels. Significant deterioration in the performance of the tests was observed in all crewmembers on the Mi-4, and were highest among the captains, while the control group exhibited few of the performance degradations. It is noted that some of the declines in performance were cumulative, i.e. grew greater with longer times. M.S.K.

Munich, Allgemeiner Deutscher Automobil-Club, 1981, p. 189-191. In German.

**A82-19223** **Evaluation of maximal and submaximal static muscle exertions.** K. H. E. Kroemer (Virginia Polytechnic Institute and State University, Blacksburg, VA) and W. S. Marras (Wayne State University, Detroit, MI). *Human Factors,* vol. 23, Dec. 1981, p. 643-653. 21 refs. Contract No. F49670-79-C-0109.

A model of the regulation of muscle strength exertion is proposed. Based on the model, methods are discussed to assess whether a subject exerts maximal or submaximal efforts. Results with 40 subjects indicate that a simple technique may be developed to judge if a subject is following instructions to exert a maximal contraction in a routine test of voluntary muscle strength. (Author)

**A82-19224** **Differences in eye movement data recorded by electro-oculography and corneal reflection techniques.** J. Lehtela (Institute of Occupational Health, Helsinki, Finland). *Human Factors,* vol. 23, Dec. 1981, p. 661-665.

The techniques of electro-oculography and corneal reflection are compared as to their abilities to monitor saccades, fixations and blinks during a visual task under simulated field conditions. Electro-oculograms and video recordings of eye mark motions were obtained simultaneously in unrestrained subjects asked to trace visually patterns of circles placed 1 m away. It is found that whereas the number of blinks given by the two methods coincide quite well, the number of saccades as recorded by the corneal reflection camera was greater than that by EOG, due to the classification of some shorter saccades as involuntary microsaccades in EOG recordings. Although the exact fixation point could not be determined in the present experiment, the fixation times calculated from EOG data appear longer than those by corneal reflection. It is concluded that while the corneal reflection camera with video monitor is suitable for monitoring the visual situation, including the fixation point, EOG is more suitable for providing quantitative data about blinks, saccades and fixations. A.L.W.

**A82-19225** **Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance.** A. D. Fisk and W. Schneider (Illinois, University, Champaign, IL). *Human Factors,* vol. 23, Dec. 1981, p. 737-750. 34 refs. Grant No. NIH-5-R01-MH-3125. NR Project 150-409.

Vigilance decrements are interpreted within a two-process (automatic/control) theory of human information processing, and the theoretical components of the normal vigilance curve are discussed in relation to type of processing and amount of practice. Two experiments were conducted showing significant vigilance decrements when subjects utilized effortful control processing; the normal decrement was not observed when effortless automatic processing was possible. Maximum vigilance decrements occur when subjects must continually and redundantly allocate control-processing resources. Results disconfirm the habituation hypothesis. It is concluded that structuring a task such that there is a consistent relationship between signals and noise will reduce vigilance problems. System design implications suggest that tasks should be structured to mimimize continuous and repetitive control processing. Methods for developing vigilance-decrement-resistant automatic processing are discussed. (Author)

**A82-19248** **Computer simulation as a visual aid in a video course.** G. L. Bell (Mitre Corp., McLean, VA). In: Summer Computer Simulation Conference, Washington, DC, July 15-17, 1981, Proceedings. Arlington, VA, AFIPS Press, 1981, p. 436, 437. U.S. Department of Transportation Contract No. FA80WA-4370; No. FA01-81-C-10001.

A study of the performance of controllers in the Air Traffic Control (ATC) system concluded that many controllers perform their ATC tasks in ways that leave them vulnerable to common human errors, misunderstandings, and confusions. The study team made, therefore, the recommendation that the controllers' training should include ways to compensate for basic human limitations. The Air Traffic Service has begun to follow the recommendation by adding videotape courses on ATC-operational remembering and listening. Three courses (for terminal radar, en route radar, and tower cab positions) are to be provided. Each course contains ten examples of aids used in simulated ATC situations which are often encountered by controllers. The workplace and equipment for the two courses for the radar positions is to be simulated. The radar displays in the scenarios require computer simulation. G.R.

**A82-19258** **Advanced aviation concepts evaluation through computer driven simulation.** J. Fabry and E. S. Stein (FAA, Technical Center, Atlantic City, NJ). In: Summer Computer Simulation Conference, Washington, DC, July 15-17, 1981, Proceedings. Arlington, VA, AFIPS Press, 1981, p. 659-661.

The goals and operational characteristics of FAA programs for human interactions with advanced avionics systems and displays are discussed. Flight training simulators are noted to offer realistic aircraft handling experience in a cost-effective fashion. The necessity of employing human factors personnel before the actual engineering of a system is stressed, and is a guiding concept in the operations of the FAA Advanced Concepts Laboratory. The Technology, Concepts, and World divisions of the Laboratory are outlined, and the training simulators, the Digital Avionics Control System, and the Cockpit Display of Traffic hardware are described for use by pilots and air traffic controllers. M.S.K.

**A82-19491 *** **Effects of vasopressin administration on diuresis of water immersion in normal humans.** M. Epstein, A. G. DeNunzio, and R. D. Loutzenhiser (U.S. Veterans Administration Medical Center; Miami, University, Miami, FL). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Dec. 1981, p. 1384-1387. Research supported by the U.S. Veterans Administration; Contract No. NAS9-15473.

The influence of vasopressin suppression on the diuresis encountered during water immersion is investigated in studies on normal humans immersed to the neck. Six hydrated male subjects were studied on two occasions while undergoing 6 h of immersion without or during the administration of aqueous vasopressin for the initial 4 h. Neck immersion is found to result in a significant increase in urinary flow rate beginning in the first hour and persisting throughout the immersion. The administration of vasopressin markedly attenuated the diuretic response throughout the period of infusion, while cessation of vasopressin administration during the final 2 h of immersion resulted in a marked offset of the antidiuresis. Results thus support the view that the suppression of antidiuretic hormone contributes to the immersion diuresis of hydrated subjects. A.L.W.

**A82-19492 *** **Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters.** E. Shvartz, V. A. Convertino, L. C. Keil, and R. F. Haines (NASA, Ames Research Center, Moffett Field, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 51, Dec. 1981, p. 1404-1410. 39 refs.

The responses to orthostasis of fluid-electrolyte and endocrine indicators in persons subject and not subject to fainting during tilting are investigated, along with the effects of heat acclimatization and physical training on those responses. Plasma volume and electrolytes and plasma vasopressin and renin activity were determined in tilt-table tests conducted before and after an eight-day period of daily heat acclimation during exercise at 50% maximal oxygen uptake at 40 C, or a control period of exercise at 24 C. Half of the 10 subjects in the study, regardless of exercise regime, showed improved orthostatic reactions in the second tilting test, related to increases in post-tilt plasma volume and potassium concentration, particularly in the nonfainters. In the first test, plasma renin activity is observed to increase fivefold and plasma vasopressin 50 times after the transition from the supine to the orthostatic positions; the respective increases were reduced by 50 and 75% in the second test. The fainters also exhibit a greater increase in vasopressin and a lower increase in renin activity upon tilting than the nonfainters. Results indicate the orthostatic-induced vasopressin increase to be related to volume control independent of renin activity. A.L.W.

**A82-19493** **Variability of oxygen affinity of blood - Human subjects native to high altutude.** R. M. Winslow, C. C. Monge, N. J. Statham, C. G. Gibson, S. Charache, J. Whittembury, O. Moran, and R. L. Berger (Centers for Disease Control, Atlanta, GA; Universidad Particular Peruana, Lima, Peru; National Institutes of Health, Bethesda; Johns Hopkins University, Baltimore, MD). *Journal of Applied Physiology: Respiratory, Environmental and Exercise*

*Physiology*, vol. 51, Dec. 1981, p. 1411-1416. 24 refs. NSF Grant No. INT-77-21795.

The oxygen equilibrium curves (OECs) of whole blood from high-altitude natives is measured in a study of the variability of oxygen affinity under in vivo conditions. An automated method was used to measure the entire OEC from 0 to 150 Torr under controlled pH and CO2 tension in 46 Peruvians native to high altitudes (4540 m) and 25 sea-level controls. Fits of the data with the Adair curve describing the successive oxygenation of hemoglobin reveal that at a pH of 7.4, the oxygen tension at which the hemoglobin is half saturated with O2 is significantly higher in the high-altitude population than in the controls. When the state of compensated alkalosis of the high-altitude subjects is taken into account, however, the values are found to be indistinguishable from the controls. It is concluded that the reduction in oxygen affinity of high-altitude natives is offset by the compensatory respiratory alkalosis so that the position of the OEC is close to that of sea-level humans. Considerable individual variability in oxygen affinities is noted in both groups. A.L.W.

**A82-19494** **Glycogen and nonspecific adaptation to cold.** J. LeBlanc and A. Labrie (Université Laval, Quebec, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Dec. 1981, p. 1428-1432. 14 refs.

Exposure to moderate cold for a few weeks causes adaptation through the development of nonshivering thermogenesis primarily in the brown adipose tissue. Exposure to severe cold by repeated short exposures also causes adaptation but by mechanisms that seem to be different. It was also found that this type of adaptation is nonspecific because it can be produced by other stresses such as swimming or fasting. Simultaneous determinations of glycogen in the liver and soleus and tibialis muscles indicated a possible role for this substrate in cold resistance. Repeated cold exposure, swimming for 3 h, or fasting for 48 h all reduced the glycogen stores when measured immediately after the stress. However, the levels of glycogen were significantly increased above the initial values when the determinations were made 24 h later. Cold tolerance measured by resistance to hypothermia at -5 C was improved only when the test was done 24 h after the stress had taken place. Thus, cold resistance is nonspecific and results suggest that glycogen stores could serve as a rate-limiting substrate. (Author)

**A82-19496** **Enhanced heat production in physically restrained rats in hypoxia.** M. Hayashi and T. Nagasaka (Kanazawa University, Kanazawa, Japan). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Dec. 1981, p. 1601-1606. 27 refs.

The combined influence of hypoxia and restraint on metabolic heat production in rats is investigated. Heat production, heat loss, colonic temperature and cardiovascular activity were monitored in rats placed in individual wire mesh cages in which they could move freely or in restraint cylinders, and exposed to mixtures of 9.5% O2 in N2 gas. Hypoxic exposure is found to lead to rapid decreases in heat production and heart rate and gradual decreases in heat loss and colonic temperature in the freely moving rats, while the restrained rats exhibited increased heat production, heat loss, colonic temperature and heart rate. The increases are reversed in restrained chemically sympathectomized rats treated with 6-hydroxydopamine hydrobromide, while norepinephrine is observed to lead to increases in heat production and heart rate in freely moving rats. Hypoxia is also found to decreace significantly blood flow to the brown adipose tissues in restrained rats while increasing blood flow to the heart, diaphragm and limb muscles. Results suggest that hypermetabolism in restrained rats during hypoxia is due to increased neurosympathetic activity, with increased muscle metabolism. A.L.W.

**A82-19497** **Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia.** M. J. Hughes, M. T. Kopetzky, F. Masiha, K. Light, and C. D. Barnes (Texas Tech University, Lubbock, TX). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Dec. 1981, p. 1607-1611. 33 refs. Grant No. NIH-HL-16240.

Changes in ion responses and in drug sensitivities of cardiac muscles of animals adapted to simulated high altitude conditions are investigated. Atria isolated from young male Wistar rats acclimated to a simulated altitude of 6000 m and from control rats were observed under normoxic conditions. The spontaneous rate of atria isolated from altitude-acclimated rats is found to be significantly lower than that of atria from the control animals. While neither group of tissues responded to the administration of ouabain, the altitude-adapted atria showed a greater sensitivity to both pentobarbital sodium and to ethanol, which stopped spontaneous activity at lower doses than in the control animals. The acclimated atria are found to be less sensitive, however, to norepinephrine and to exhibit a smaller chronotropic response and a greater inotropic response to increased concentrations of calcium. The data obtained are thus indicative of changes in tissue metabolism similar to those found in newborn animals. A.L.W.

**A82-19498** **Breath-by-breath measurement of true alveolar gas exchange.** W. L. Beaver, N. Lamarra, and K. Wasserman (California, University, Medical Center, Torrance, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Dec. 1981, p. 1662-1675. 15 refs.

A method has been developed for the on-line estimation of breath-by-breath alveolar gas exchange from measurements of gas exchange at the mouth corrected for changes in functional residual capacity and alveolar gas concentration. The algorithms employed calculate alveolar O2 and CO2 gas exchanges from the alveolar O2, CO2 and N2 concentrations at end of expiration, the volume containing the lung gas stores at end of expiration and the breath-to-breath change in this volume. Error sensitivity analysis indicates the effects of inaccuracies due to measurement errors to be similar in magnitude to those found in the conventional open-circuit method. Direct comparisons between the alveolar gas exchange measured by the present method and according to the open-circuit assumption that inspired and expired N2 volumes are equal, in subjects exercising at various work rates reveals the presence of significant breath-to-breath differences in gas exchange, particularly during metabolic and respiratory transients, which may have a significant influence in the interpretation of the underlying physiology. A.L.W.

**A82-19808** **Psychophysical evidence for more than two kinds of cone in dichromatic color blindness.** F. S. Frome, T. P. Piantanida, and D. H. Kelly (SRI International, Menlo Park, CA). *Science*, vol. 215, Jan. 22, 1982, p. 417-419. 11 refs. Grants No. NIH-EY-02357; No. NIH-EY-01128.

Psychophysical evidence shows that at least some classically diagnosed dichromats have three cone types rather than two. The anomalous cones, previously thought to be absent, are less sensitive than normal cones to both spectral and temporal variations, and have spectral sensitivities like those of the abnormal cones of anomalous trichromats. These results are not consistent with either loss or replacement models of X-linked recessive color-vision defects, since some dichromats apparently have the same three photopigments as anomalous trichromats. **A82-19743** # **Staying sane in space.** B. J. Bluth (California State University, Northridge, CA). *Mechanical Engineering*, vol. 104, Jan. 1982, p. 24-29. 35 refs.

With a view to the establishment of procedures and techniques that will help crews adapt to long missions aboard the projected NASA Space Operations Center, in which nine persons will live for between three and six months, a historical study is made of confined crew performance in isolated environments. Attention is also given to Soviet long-duration mission crew experience. Among the confined, isolated and stressful precedents surveyed are Antarctic research teams, submarine crews, the operators of oceanographic research vessels and undersea research laboratories, and trainees in specially designed simulators. It is generally found that personality screening prior to confinement did not accurately predict subsequent behavior, with irritability increasing as the mission progressed. NASA and

Soviet screening and training procedures are described, with recommendations for crew compartment design. O.C.

Bykov, and I. Ia. Kimmel'man (Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Sverdlovsk, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Nov. 1981, p. 1670-1675. 11 refs. In Russian.

The dependence of the exponential decay constant expressing the isometric relaxation of the myocardium on temperature is investigated in animals with various specific contents of myocardial sarcoplasmic reticulum. Experiments were performed on cardiac ventricles and atria isolated from rabbits, frogs and turtles and electrically stimulated to produce maximal contraction at temperatures from 10 to 35 C. Arrhenius plots derived from the data are found to be linear in the myocardia of the rabbit and frog, with a greater activation energy for the relaxation found in the rabbit. The Arrhenius plot for the turtle, which has a sarcoplasmic reticulum content intermediate between those of the frog and rabbit, corresponds to two straight lines with different activation energies. Results thus support the hypothesis of two seperate mechanisms of calcium removal, involving the sarcoplasmic reticulum and cellular membrane, in muscle relaxation. A.L.W.

**A82-19749** † **The influence of muscular work on the vestigial effects of cold acclimation (Vliianie myshechnoi raboty na sledovnye effekty kholodovoi akklimatsii).** V. I. Sobolev and G. I. Chirva (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Nov. 1981, p. 1710-1716. 17 refs. In Russian.

The persistence of the vestigial effects of long-term cold acclimation and the effects of regular muscular work on these effects are investigated in studies on male albino rats preliminarily exposed to a temperature of 2 C for 28 days. Measurements of the calorigenic effect of noradrenaline, cold tolerance at -25 C, the level of working hyperthermia and organ and tissue weights were performed on the first, tenth, 20th, and 30th days of the post-acclimation period in control rats and rats performing 50 min of treadwheel exercise daily. Results indicate noradrenaline-dependent thermogenesis to be the most persistent effect of long-term cold acclimation. Muscular activity is found to accelerate the process of deacclimation due to its effects on physical, and then chemical, thermoregulation. A.L.W.

**A82-20016** * **Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres.** W. L. Chameides (Georgia Institute of Technology, Atlanta, GA) and J. C. G. Walker (Michigan, University, Ann Arbor, MI). *Origins of Life,* vol. 11, Dec. 1981, p. 291-302. 35 refs. Grant No. NAG1-85; Contract No. NAGW-176.

A thermochemical-hydrodynamic model of the production of trace species by electrical discharges has been used to estimate the rates of fixation of C and N by lightning in the primitive atmosphere. Calculations for various possible mixtures of $CH_4$, $CO_2$, CO, $N_2$, $H_2$, and $H_2O$ reveal that the prime species produced were probably HCN and NO and that the key parameter determining the rates of fixation was the ratio of C atoms to O atoms in the atmosphere. Atmospheres with C more abundant than O have large HCN fixation rates, in excess of 10 to the 17th molecules/J, but small NO yields. However, when O is more abundant than C, the NO fixation rate approaches 10 to the 17th molecules/J while the HCN yield is small. The implications for the evolution of life are discussed. (Author)

**A82-20017** **New data on abiogenic synthesis of prebiological compounds in volcanic processes.** N. E. Podkletnov and E. K. Markhinin (Akademiia Nauk SSSR, Institut Vulkanologii, Petropavlovsk-Kamchatskiy, USSR). *Origins of Life,* vol. 11, Dec. 1981, p. 303-315. 13 refs.

Volcanoes were deduced to be high-productive generators of complex organic compounds. Ash-gas clouds produced by volcanic eruptions can be considered as many-kilometer chemical reactors with a wide range of temperatures and pressures, powerful electric discharges and a large catalytic surface. In the eruption products investigated, nitrogen-containing components of nucleic acids of uracil type, metal complexes of porphyrins and porphyrins in the metal-free form and polycyclic aromatic hydrocarbons have been found. In all, 64 carbon-containing compounds have been identified in the volcanic juvenile ash and in volcanic bombs and 13 groups of carbon-containing compounds whose composition is yet unidentified have been found. Research supported by the U.S. Department of Energy; Grant No. NGL-06-020-582.

Results are presented of experiments on the radioracemization of amino acids in the presence of silica surfaces such as may have been found on the prebiotic earth. L-leucine and a DL-leucine mixture deposited on samples of 1-quartz and an amorphous silica preparation (Syloid 63) was subjected to Co-60 gamma-ray irradiation, then analyzed by gas chromatography to determine the radiolysis and racemization rates. The quartz surface is found to have a marginal efficacy in enhancing radiolysis when compared with a crystalline L-leucine control, although enhancing radioracemization symmetrically by a factor of two. Both the radiolysis and radioracemization of L-leucine and DL-leucine on a Syloid-63 silica surface are observed to increase with increasing radiation dose, and to be substantially greater than in the crystalline controls. Additional experiments with the nonprotein amino acid isovaline deposited on Syloid 63 confirm the greater radiolysis susceptibility of amino acids deposited on silica with respect to the crystalline state, although racemization is not observed. The observations suggest that the presence of a silica surface would have a deleterious effect on any mechanism for the origin of molecular chirality relying on stereoselective beta-radiolysis. A.L.W.

**A82-20020** * **A model for the enantiomeric enrichment of polypeptides on the primitive earth.** N. E. Blair and W. A. Bonner (Stanford University, Stanford, CA). *(College Park Colloquium on Chemical Evolution, 5th, University of Maryland, College Park, MD, Oct. 31, 1980.) Origins of Life,* vol. 11, Dec. 1981, p. 331-335. 24 refs. Grant No. NGL-05-020-582.

A potential model is presented for the origin of optical activity in polypeptides on the primitive earth due to enantiomeric enrichment in succeeding polymerization-hydrolysis cycles. The model was developed in experiments with the polymerization of a DL-leucine N-carboxyanhydride mixture with a 31.2% enantiomeric excess of the L isomer with sodium methoxide initiator to yield a polyleucine product which was in turn partially hydrolyzed by acid. The polymerization-hydrolysis was found to produce a net 23.8% increase in the enantiomeric excess of the remaining unhydrolyzed polypeptide (14.2% from the polymerization and 9.6% from the partial hydrolysis). On the basis of these results, it is suggested that a slight excess produced by an appropriate chiral physical process may be enhanced by cycles of stereoselective polymerization and hydrolysis driven by fluctuating wet and dry environmental cycles on the primitive earth. A.L.W.

**A82-20021 *** **Search for effect of longitudinally polarized protons on optically active amino acids.** R. M. Lemmon, H. E. Conzett (California, University, Lawrence Berkeley Laboratory, Berkeley, CA), and W. A. Bonner (Stanford University, Stanford, CA). *Origins of Life,* vol. 11, Dec. 1981, p. 337-341. 14 refs. Contract No. W-7405-eng-48; Grant No. NGL-05-020-582.

The influence of irradiation by longitudinally polarized protons on the differential decomposition of amino acid is investigated in a test of the Vester Ulbricht hypothesis that L-amino acids were produced in preference to the D isomers on the primitive earth due to the effects of parity violation in beta decay. Samples of DL-leucine were irradiated with protons of both positive and negative longitudinal polarization, then analyzed by gas chromatography. Despite advantages of higher polarization, lower velocity and higher ionization density of protons with respect to electrons, proton irradiation is found to lead to no detectable asymmetries in DL-leucine degradation, even at 50% gross degradation. A.L.W.

**A82-20022** **Origin of translation - The hypothesis of permanently attached adaptors.** S. Tyagi (Jawaharlal Nehru University, New Delhi, India). *Origins of Life,* vol. 11, Dec. 1981, p. 343-351. 29 refs.

A mechanism is proposed for the prebiotic translation of polynucleotides into a sequence of amino acids fulfilling the function of a template-dependent nucleotide polymerase, based on the permanent attachment of adaptors (tRNA) to nucleic acid molecules. The mechanism postulates the existence of a primal tRNA with an acceptor system bearing the amino acid located near the anticodonic region, and with regions capable of associating with neighboring primal tRNAs as well. The messenger-tRNA complex thus formed would be capable of high fidelity translation with a small degree of amino acid-anticodon specificity without the need for ribosomes or aminoacyl synthetases. Structural evidence supports the possibility of inter-primal-tRNA associations, and thermodynamic constraints are compatible with the hypothesis. The approximate date of occurrence of the proposed system is also consistent with the period of occurrence of the earliest organisms with ribosomes. A.L.W.

**A82-20023** **A theory of the origin of life.** C. B. Olson (Stanford University, Stanford, CA). *Origins of Life,* vol. 11, Dec. 1981, p. 353-368. 28 refs.

A theory is developed for the functioning of the processes essential to life in the primordial earth environment and the evolution of the primordial translation apparatus. Mechanisms are proposed regarding the supply of the energy required for biological transfer reactions from activated compounds, nucleic acid replication by single template-directed bond formation and cell retention and division by environmental factors. The evolution of the nucleic acid replication process to include the synthesis of enzymes facilitating replication is explained by the formation of a transfer nucleic acid which acted to catalyze the transfer of activated amino acids to accessible amino groups. Successive steps in evolution are characterized by an increase in the number of amino acids linked together, and the appearance of a messenger nucleic acid to specify the composition and sequence of the amino acids. Ribosomes would arise acting to improve the translation apparatus as it became more complex. Finally, it is proposed that the present genetic code evolved by a process of codon length refinement. A.L.W.

**A82-20024** **A neutral theory of biogenesis.** A. Ferracin (Policlinico Umberto I, Rome, Italy). *Origins of Life,* vol. 11, Dec. 1981, p. 369-385. 170 refs.

The selective Darwinian theory of chemical evolution is critically reviewed and the tentative conclusion is reached that neither the theoretical analyses nor the experiments with phages can really prove it. An alternative proposal is put forth which considers the possibility that the biogenetic process has been driven by stochastic forces, e.g. it took place in the absence of Darwinian selection which, in turn, started only when the first protocells came into existence. The dynamics of the early self-organization of living structures should be understood in terms of self-assembly. The complexification of living matter is thus not represented as a gradual phenomenon but as a series of abrupt and relatively fast transitions consisting in the aggregation of pre-systems which had evolved by their own. The shift towards new and variegated states proposed by the bifurcation theory are not considered particularly relevant for reasons reported in the text, nor is it believed that dissipation can entirely account for the order observed in living cells. **A82-20025 *** **Could life have evolved in cometary nuclei.** A. Bar-Nun (Tel Aviv University, Tel Aviv, Israel), A. Lazcano-Araujo (Universidad Nacional Autónoma de México, Villa Obregón, Mexico), and J. Oró (Houston, University, Houston, TX). *Origins of Life,* vol. 11, Dec. 1981, p. 387-394. 66 refs. Research supported by the Consejo Nacional de Ciencia y Tecnologia of México; Grant No. NGR-44-005-002.

The suggestion by Hoyle and Wickramasinghe (1978) that life might have originated in cometary nuclei rather than directly on the earth is discussed. Factors in the cometary environment including the conditions at perihelion passage leading to the ablation of cometary ices, low temperatures, the absence of an atmosphere and discrete liquid and solid surfaces, weak cometary structure incapable of supporting a liquid core, and radiation are presented as arguments against biopoesis in comets. It is concluded that although the contribution of cometary and meteoritic matter was significant in shaping the earth environment, the view that life on earth originally arose in comets is untenable, and the proposition that the process of interplanetary infection still occurs is unlikely in view of the high specificity of host-parasite relationships. A.L.W.

**A82-20146** **The biological effects of low-level ionizing radiation.** A. C. Upton (New York, University, New York, NY). *Scientific American,* vol. 246, Feb. 1982, p. 41-49.

The hazard to human health posed by low levels of ionizing radiation from natural and artificial sources is discussed. The natures of the natural background radiation and man-made radiation sources are considered, and carcinogenic and heritable effects are identified as the principal health hazards associated with small doses of radiation. The mechanisms of the cell damage by radiation with low and high rates of linear energy transfer are examined, with particular emphasis on damage to DNA resulting in chromosomal abnormalities. It is pointed out that the frequency of chromosomal aberrations increases linearly with radiation dose in the low to intermediate range for both low and high energy transfer radiation, however increases more quickly at high doses for the low transfer radiation. Studies of the dose-mutation rate relationship in mice and humans are discussed which indicate that the dose required to double the human mutation rate lies between 0.2 and 2.5 sieverts, along with studies of cancer incidence rates which indicate the total excess of cancers of all types to be from 4 to 18/year per 10,000 people per sievert. The relatively low risk associated with low levels of ionizing radiation is discussed in relation to public perceptions and the concept of acceptable risk. A.L.W.

**A82-20257 *** **Survival in space.** B. Webbon (NASA, Ames Research Center, Moffett Field, CA). *Natural History,* vol. 90, Dec. 1981, p. 50-57.

The evolution of space suit design to meet the needs of past and future manned space missions is discussed. Following a brief consideration of the purposes of the space suit in providing an artificial atmosphere and protection from environmental hazards, attention is given to the first high-altitude suits developed in the 1930's for the protection of balloon pilots, and for high-altitude airplane flights. The Mercury project space suit is presented as essentially similar to those for high-altitude military aircraft developed since World War II, providing pressurization and oxygen as a backup to the capsule systems. Modifications to the suit allowing it to be worn without discomfort during work outside the spacecraft, which were stimulated by experience in Gemini missions, are considered, which culminated in the suits of the Apollo and Skylab programs which provided insulation, cooling and life support for periods of up to eight hours. Finally, changes to suit design made necessary by the increasing numbers of men and women to perform Space Shuttle flights and space construction operations are considered. A.L.W.

**A82-20301 †** **Investigation of the otolithic membrane of the utricle of the guinea pig (Issledovanie otolitovoi membrany utrikulusa morskoi svinki).** Ia. A. Vinnikov, D. V. Lychakov, K. A. Koichev, A. Boiadzhieva-Mikhailova, I. Khristov, and E. A. Lavrova (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR; Meditsinska Akademiia, Pleven; B'lgarska Akademiia na Naukite, Institut po Morfologiia, Sofia, Bulgaria). *Zhurnal Evoliutsionnoi Biokhimii i Fiziologii*, vol. 17, Sept.-Oct. 1981, p. 474-479. 16 refs. In Russian.

A study is presented of the structure and composition of the guinea pig otolithic membrane at various stages of development. The scanning and transmission electron microscopy reveal several morphological classes of otoconia, the most common being smooth, transitional and rough otoconia, with rhombohedral shapes less frequently encountered. The smooth and rough otoconia appear to be independent morphological forms, with transition from one type to the next not taking place and the numerical ratio between them not changing over course of development. The mean sizes of the otoconia are observed to increase only during embryological development. A linear relation is found between otoconial length and diameter. Chemical analysis reveals the presence of small amounts of Na and Mg in addition to Ca, and trace amounts of Cs in the membrane; the chemical composition does not change in the course of development. The results may be used in the study of the effects of prolonged weightlessness on the vestibular apparatus of vertebrates. A.L.W.

**A82-20302 † Some indicators of carbohydrate metabolism in rat lung during repeated and chronic hypoxia (Nekotorye pokazateli uglevodnogo obmena v legkikh krys pri povtornoi i khronicheskoi gipoksii).** N. N. Pribylova (Khabarovskii Meditsinskii Institut, Khabarovsk, USSR). *Voprosy Meditsinkoi Khimii*, vol. 27, Sept.-Oct. 1981, p. 634-636. 26 refs. In Russian.

The effects of prolonged chronic exposure to hypoxia on carbohydrate metabolism in the rat lung are investigated. Determinations of glucose and glycogen levels, proteins, lactate and pyruvate concentrations and hexokinase and lactate dehydrogenase activities were made in male and female rats following 7 and 36 days of 6-hr exposures to a simulated altitude of 9000 m. The 7-day exposures are found to be accompanied by increases in lactic acid concentrations and the lactate/pyruvate ratio and reductions in glycogen levels, indicative of the activation of the glycolitic pathway in the lung. A reduction in hexokinase activity is observed associated with the increased glucose, possibly due to an increase in glucocorticoid secretion. The decrease in hexokinase activity and increase in glucose content are observed to be more marked in the females than in the males during both stages of hypoxia, which may explain the greater hypoxia tolerance of females. With longer exposure to hypoxia, it is observed that lung glycogen stores are depleted, and glucose levels increase paralleled by a drop in hexokinase activity. A.L.W.

S. S. Korsakova*, vol. 81, no. 8, 1981, p. 1130-1133. In Russian.

An EEG description algorithm based on the quantitative assessment of the bioelectric activity of the brain is proposed. In describing a given rhythm, attention is given to its distribution, pattern, degree of distortion by other signals, the presence of generalized manifestations, and local outbreaks and paroxysms. The algorithm includes a description of the orientation reaction, responses to rhythmic and trigger photostimulation, hyperventilation, and pharmocological loads. The algorithm makes a more complete use of EEG information and can serve as the basis of special-purpose computer programs. B.J.

**A82-20307 † Acute experimental emotional stress in rabbits in a modulated electromagnetic field (Ostryi eksperimental'nyi emotsional'nyi stress u krolikov v usloviiakh modulirovannogo elektromagnitnogo polia).** A. V. Gorbunova, N. V. Petrova, V. V. Portugalov, and S. K. Sudakov (Akademiia Nauk SSSR, Institut Normal'noi Fiziologii, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, Sept.-Oct. 1981, p. 774-780. 15 refs. In Russian.

The effects of a modulated electromagnetic field on the state of emotional stress induced by alternating or combined stimulation of the ventromedial nuclei of the hypothalamus and electrocutaneous stimulation are investigated in rabbits. Experimentally stressed animals and unstressed, restrained controls, were placed in a field of intensity 30 V/m, carrier frequency 30 mHz and modulation frequency 7 Hz, and arterial pressure and heart rate, water soluble protein levels in various extramural autonomic and sympathetic ganglia, and lactate dehydrogenase isoenzyme spectra were determined. Application of the modulated electromagnetic field is found to reduce the number of rabbits susceptible to the harmful effects of stresses, as well as reverse the decrease in protein content and eliminate the tendency towards increased aerobic metabolism in the cardiac conductive system. The stressed rabbits in the electromagnetic field also exhibited slightly greater activities of the fast LDH fractions in the superior cervical, stellate and nodose ganglia. A.L.W.

**A82-20308 † The functional condition of the ampullar apparatus in Meniere's disease (Funktsional'noe sostoianie ampuliarnogo apparata pri bolezni Men'era).** Z. I. Munchaev, A. O. Radzhabov, and Iu. O. Bulaev (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii*, July-Aug. 1981, p. 7-9. 20 refs. In Russian.

The functional characteristics of Meniere's disease are investigated in tests involving graded threshold and subthreshold stimulation of the ampullar receptors. Clinical examination of 50 patients reveals the disease to be characterized by a definite sequence of injury to inner ear receptors, in the first stages involving the cochlea and ampulla and in the final stage the sacculus vestibuli. It is found that the longer a patient has had the disease, the greater are the chances for the second ear to be affected. Threshold stimulation studies on a rotating chair reveal a decline in vestibular function, progressing with the duration of the disease. Vestibular recruitment was discovered in 73% of the cases. The dynamics of changes in human functional condition and work capacity during the process of adaptation to middle (2200-2400 m) and high (3200-3400 m) altitudes is investigated. In persons not previously adapted to hypoxia, altitude exposure is found to lead to decreases in work capacity as measured by the accuracy of visual-motor responses, and in the quality and tempo of professional activities, particularly those connected with intense physical exercise. Fatigue is found, accompanied by an impairment in cardiovascular and respiratory capacities. These changes in functional condition and work capacity are noted to be especially marked in the 7 days following ascent to altitude, and to persist for at least 2 months. A.L.W.

A comparative study is presented of the effects of morphine and promedol on the sensitivity of the mouse to hypoxic hypoxia and the state of glycolysis under conditions of oxygen insufficiency. Determinations of blood glucose, lactate, pyruvate and excess lactate levels, redox potentials, free energy and lactate dehydrogenase isoenzyme activities were performed in animals injected with 25 mg/kg morphine or promedol and exposed to a stimulated altitude of 10 km for 1 hour. Whereas morphine had no effect on survival relative to uninjected controls, promedol is observed to increase mortality from 55 to 72%. These differences are reflected in the effects of the two drugs on carbohydrate metabolism, with morphine leading to increases in blood pyruvate, redox potential and free energy, creating favorable conditions for the oxygen utilization, which are not found with promedol. Analysis of lactate dehydrogenase isoenzyme distributions reveals that promedol favors the final stage of glycolysis in organs with aerobic metabolism, while morphine favors it in anaerobic organs. Finally, observations that adrenalin does not induce an elevation in blood sugar levels are noted as evidence for the depletion of glycogen and glucose stores. A.L.W.

The conference on the special and clinical physiology of hypoxic states held in October 1979 at the Bogomol'tz Institute of Physiology in Kiev is briefly described. Particular consideration is given to the new classification of hypoxic states proposed by Kolchinskaia. B.J.

A82-20318 † **The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method (Izmerenie partsial'nogo napriazheniia kisloroda i uglekislogo gaza v tkaniakh organizma po metodu gazovogo depo).** V. L. Popkov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 67-69. 6 refs. In Russian.

The use of the gas depot method of Campbell (1929) and Van Liew (1962) in the determination of the partial pressures of oxygen and carbon dioxide in the tissues of an organism is discussed. The method involves the introduction of a gas of any composition into a tissue so that a gas cavity is formed which eventually comes into equilibrium with the gases in the surrounding tissue, followed by the extraction and analysis of cavity gases. The slow response time of the method makes it most suitable for studies of long duration, such as experiments on acclimatization over several months to altitude hypoxia, the effects of hypoxic, hypercapnic and hyperoxic breathing mixtures over several hours or days and prolonged hypergravity, where the responses of polarographic electrodes become unstable. The gas depot method may also be used in studies of the tensions of N2 and other gases dissolved in body tissues. A.L.W.

A82-20319 † **Elevation of hypoxia resistance with the use of gutimine (Povyshenie rezistentnosti k gipoksii s pomoshch'iu gutimina).** V. M. Vinogradov, L. V. Pastushenkov, and E. N. Sumina. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 81-85. 43 refs. In Russian.

Experimental data demonstrating the protection from the adverse effects of hypoxia offered by the antioxidant gutimine and its analogs is presented. The experiments included preliminary studies of hypoxia resistance and recovery under simulated altitude, studies of circulatory hypoxia in the brain and in intrauterine fetuses, studies of myocardial ischemia during acute and chronic experiments and studies where cardiac, kidney and limb circulation is cut off. The compound was also found to be effective in cases of hemorrhagic hypotension, complex hypoxia in peritonitis, meningococcal meningitis, and the weakening of uterine muscle contractility during prolonged deliveries, and in cranial-cerebral trauma. Mechanisms of the antihypoxic action of gutimine and its analogs have been found to include the reduction of oxygen utilization, the activation of aerobic and anaerobic metabolism, the acceleration of lactate utilization, the inhibition of lipolysis in fat tissue, and stabilization of cell membranes. Clinical observations also support the experimental data. A.L.W.

A82-20320 † **The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response (Vliianie adaptatsii k periodicheskomu deistviiu gipoksii na poststressornuiu aktivatsiiu pervichnogo immunnogo otveta).** G. T. Sukhikh, B. A. Frolov, and F. Z. Meerson (Akademiia Meditsinskikh Nauk SSSR, Moscow; Orenburgskii Meditsinskii Institut, Orenburg, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 73-77. 8 refs. In Russian.

The present work studies the influence of emotional-pain stress (EPS) on the primary immune response and lymphocyte blast transformation (LBT) in Wistar rats adapted or nonadapted to the periodic effect of hypoxia. It is found that EPS in nonadapted animals caused intensification of the immune response, manifested in the number of antibody-producing cells (ABPC). The LBT indices did not change significantly in such cases. In animals adapted to the periodic effect of hypoxia the total force of the immune response increased but the formation of ABPC was delayed and their relative and absolute maximum values were reached on the eighth and not the fifth day after immunization. The LBT was reduced by 33.4-52.4% as compared with that in nonadapted animals. B.J.

A82-20321 † **A combined method for the study of tissue respiration under conditions corresponding to natural gas homeo-**

stasis (Kombinirovannyi metod issledovaniia tkanevogo dykhaniia v usloviiakh estestvennogo gazovogo gomeostaza). E. S. Mailian, E. A. Kovalenko, and L. B. Buravkova. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, July-Aug. 1981, p. 85-87. 6 refs. In Russian.

A method based on a combination of the Warburg flask with a polarographic electrode has been developed for the study of tissue respiration which enables the oxygen tension in the incubation medium to be maintained at levels corresponding to those in the in vivo tissue. The polarographic electrode placed in the flask is used to monitor the oxygen tension in the incubation medium, while the manometer of the Warburg apparatus measures the respiration rate under the prescribed oxygen tension. The combined method has been used to measure tissue respiration in rats following exposure to slowly increasing hypoxia and to combined hypoxia and hypercapnia. When compared to experiments performed in air, the variations in the oxygen consumption of brain tissue homogenates taken from animals at three stages of hypoxia exhibit more marked variation, becoming greatest at the second stage (70-60 mm Hg). The method of main components and the method of canonical correlations are used to study the organization of the background EEG of healthy subjects and those suffering from paranoid schizophrenia. Nonspecific forms of EEG organization are obtained which reflect the state of the activating and synchronizing mechanisms of the brain. These forms of organization were found to be informative with respect to the action of neuroleptics, and can be used in the prognosis of the effectiveness of therapy on a statistically confident level. Forms of EEG organization which correlate with psychopathological disorders are also obtained. B.J.

**A82-20327** † **The significance of airflow resistance to changes in responses to increasing hypercapnia (O znachenii rezistivnogo soprotivleniia v izmeneniiakh reaktsii na narastaiushchuiu giperkapniiu).** M. A. Pogodin, A. M. Shmeleva, and E. L. Kalacheva (Akademiia Nauk SSSR, Nauchno-issledovatel'skii Institut Fiziologii, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 7, July-Aug. 1981, p. 616-622. 26 refs. In Russian.

The effects of supplementary respiratory resistance on pulmonary ventilation and inspiratory muscle work during the progressively increasing hypercapnia are investigated. Measurements of inspiratory flow velocity and intrasternal pressure and calculations of ventilation and inspiratory work were performed for awake subjects exposed to 12, 20 and 26 cm H2O/l per sec during controlled alveolar hypercapnia. Resistive loading is shown to reduce ventilatory reactions to CO2, and induce a more rapid increase in inspiratory muscle work that is not proportional to the magnitude of the increased resistance. The characteristics of the ventilatory response are indicative of cortical influences. A.L.W.

**A82-20328** † **The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity (Znachenie obratnoi sviazi pri adaptivnom regulirovanii patologicheskoi bioelektricheskoi aktivnosti mozga).** A. A. Vereshchagina (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR) and E. A. Kaidanova (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 7, July-Aug. 1981, p. 579-586. 12 refs. In Russian.

**A82-20329** † **The effects of an aqueous potassium loading test on kidney function (Vliianie vodno-kalievoi nagruzochnoi proby na funktsiiu pochek).** R. I. Aizman (Novosibirskii Gosudarstvennyi Pedagogicheskii Institut, Novosibirsk, USSR). *Fiziologiia Cheloveka*, vol. 7, July-Aug. 1981, p. 687-692. 26 refs. In Russian.

Normal human kidney functioning in response to aqueous potassium loading is investigated with particular attention given to the specificity of the potassiouretic response. Blood and urine samples were taken from 28 healthy subjects before and after loading with 50 mg KCl/kg body weight in a 20% aqueous solution, or water alone. The ingestion of KCl, while not inducing any variation in circulatory cation concentrations, is found to cause a two-phase diuretic reaction, a marked increase in potassium excretion, and a shorter-duration and lower elevation in natriuresis as compared with the controls. The magnitude of the potassiouretic reaction is observed to depend on the initial level of ion excretion. Results suggest the presence of a reflex mechanism of potassium balance, and demonstrate specificity in kidney ionouretic responses. A.L.W.

**A82-20330** † **Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity (Issledovanie vozvratnogo tormozheniia v spinnom mozge cheloveka pri staticheskoi deiatel'nosti skeletnykh myshts).** I. N. Pleshchinskii and V. I. Alatyrev (Kazanskii Gosudarstvennyi Universitet, Kazan, USSR). *Fiziologiia Cheloveka*, vol. 7, July-Aug. 1981, p. 737-742. 17 refs. In Russian.

The characteristics of recurrent inhibition in the human spinal cord during and after static activity of the skeletal muscles are investigated. Determinations were made of the relation of the amplitudes of the H responses of the soleus muscle obtained during paired and single stimulation of the tibial nerve by stimuli of various intensities in subjects exerting force on a foot pedal. Static muscle activity is found to be accompanied by a reduction in the recurrent inhibition of the motoneurons innervating the muscle. Cessation of the muscle work leads to an initial decline in motoneuron reflex excitability and enhancement in recurrent inhibition, which is followed by an elevation in excitability as the inhibition continues to increase. Muscle rest during analogous activity of opposing muscles induces less marked changes in motoneuron excitability, and no response in the level of recurrent inhibition. In addition, voluntary muscular activity in one extremity is found not to influence neural activity in the spinal center of the other extremity. A.L.W.

**A82-20331** † **Pulse rate evaluation of the relative physiological intensity of aerobic muscular work (Pul'sovaia otsenka otnositel'noi fiziologicheskoi napriazhennosti aerobnoi myshechnoi raboty).** V. M. Alekseev and Ia. M. Kots (Gosudarstvennyi Tsentral'nyi Institut Fizkul'tury, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 7, July-Aug. 1981, p. 728-736. 20 refs. In Russian.

Relations between absolute and relative indicators of heart rate and oxygen uptake as measures of physiological work intensity are investigated in athletes and nonathletes during aerobic muscular activity. Bicycle ergometer exercise at the same absolute aerobic power (equal oxygen uptake) is found to be accompanied by different absolute exercise heart rates in subjects with different characteristic maximal oxygen uptakes and maximal heart rates. In work at the same relative aerobic power (percentage of maximal oxygen uptake equal), the differences in exercise heart rates between groups are reduced, and are a function primarily of maximal heart rate and heart rate reserve (the difference between actual and maximal rates). Relative pulse rate indicators (percentage maximal rate and exercise increase) remained approximately the same at equal relative aerobic powers in subjects of different capacities. It is concluded that the percent maximal heart rate and the relative increase in heart rate are the most suitable indicators of the comparative physiological intensities of aerobic work. A.L.W.

**A82-20332** † **Parameters of the interaction of bradykinin with cardiovascular system receptors (Parametry vzaimodeistviia bradikinina s retseptorami serdechno-sosudistoi sistemy).** V. I. Kiselev and A. L. Panchenko (Altaiskii Meditsinskii Institut, Barnaul, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Sept. 1981, p. 1342-1347. 12 refs. In Russian.

A quantitative investigation is presented of cardiovascular receptor stimulation by bradykinin to produce a lowering of arterial pressure. Dose-response curves were constructed to express the relation between intravenous and intraarterial injections of bradykinin and arterial pressure in dogs and albino rats. The resulting equation is found to resemble that obtained describing depressor adrenergic and certain cholinergic reactions. The greatest hypotensive response to bradykinin injection is obtained when the peptide is administered intraaortically, and the kininergic reaction is noted to be significantly more pronounced in dogs than in rats. A.L.W.

**A82-20333** † **Changes of the aggregation and orientation structure of blood in pulsating flow (Ob izmenenii agregatsionnoi i orientatsionnoi struktury krovi pri pul'siruiushchem techenii).** V. A. Levtov, N. I. Nikiforov, and N. Kh. Shadrina (Akademiia Nauk SSSR, Laboratoriia Fiziologii Krovoobrashcheniia, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Sept. 1981, p. 1336-1341. 8 refs. In Russian.

Reflection photometry was used to investigate erythrocyte suspensions in a rigid glass tube in an effort to examine structural changes of blood as a function of hydrodynamic pulsation frequency. It is shown that the aggregation-orientation structure of the erythrocytes distinctly changes as a function of the hydrodynamic oscillation frequency of blood flow within the range of natural heart rate. **A82-20529** **Flight simulation - The military need.** P. D. M. Moore (RAF, London, England). In: Experience and needs of civil and military flight simulator users; Proceedings of the Flight Simulation Symposium, London, England, April 7, 8, 1981. London, Royal Aeronautical Society, 1981. 4 p.

Military applications of simulators for helicopter and jet pilot training are reviewed. Experience in simulators which mock the VC 10, Hercules, and Nimrod helicopters is intended to eliminate much airborne training, noting that simulation of all known threat radars is now possible. Although the RAF currently uses 23 simulators for jet flight, emphasis is placed on the fact that the simulators allow practice at emergency conditions, procedures, and instrumentation, while only with new Tornado simulators will there be full handling capability simulation. The use of g seats, the length of an acceleration impulse, and the possibilities for full-image motion generation by computer are discussed. The instructor's instrument panel is criticized, and suggestions are made for improving switch spacing, more accurate feedback instrumentation from the trainee's panel, and a more advantageous viewing position. M.S.K.

**A82-20534** **Flight simulation in the current Australian airline scene.** A. R. Gray (Transport Australia, Australia). In: Experience and needs of civil and military flight simulator users; Proceedings of the Flight Simulation Symposium, London, England, April 7, 8, 1981. London, Royal Aeronautical Society, 1981. 7 p.

The use of simulators by the two nationally and one internationally franchised Australian airlines is described. The simulators for 747 aircraft flying are considered to be sufficient for credit for all air-work sequences, for engine failure in take-off, and for all instrument flight sequences and two- and three-engine approaches, but not for landing and flare. Accreditation levels for the internal operators are reviewed, noting that thus far no pilot has received landing credits in a simulator, and the near term arrival of six degrees-of-freedom simulators with wraparound visuals is mentioned. Personnel isolation and formal radio conversations are used to maintain the fidelity of the simulations, and pilots are frequently employed to judge the effectiveness of the simulators in giving the actual feel of a real aircraft. M.S.K.

**A82-20538** **Visual technology and the future.** D. Shorrock (Rediffon Simulation, Inc., Arlington, TX). In: Experience and needs of civil and military flight simulator users; Proceedings of the Flight Simulation Symposium, London, England, April 7, 8, 1981. London, Royal Aeronautical Society, 1981. 4 p.

The development of visual reproductions with high realism fidelity for flight simulators is traced, and attention is given to regulatory requirements. Computer generated imagery reached the stage of two-window, full color landing maneuvers in about 1980, and the 747 simulator features four-window, three channel projection, in line with FAA Phase II requirements. Flight through low cloud layers and the matching of a variable coefficient of friction to visual representation of a contaminated runway are reviewed, and a distinction is made between the necessities of normal flight training simulators and the task-oriented complexities of military simulators. The installation of redundant architecture and parallel processing units in a modular approach to simulator computer design is asserted to be the means for highly complex, realistic, Phase III simulators. M.S.K.

**A82-20539** **The semi-automatic instructional system.** W. S. Reese and R. A. Hansen (Singer Co., Link Div., Binghamton, NY).

In: Experience and needs of civil and military flight simulator users; Proceedings of the Flight Simulation Symposium, London, England, April 7, 8, 1981. London, Royal Aeronautical Society, 1981. 17 p.

The requirements and operational characteristics of the B-52 Weapon System Trainer are discussed. The WST has functional simulation for six crew members in two groups of three, with six degrees-of-freedom and the option of separate operation by any two-man team in their own segment. Noting that many of the WST functions cannot be performed for practice on board the aircraft, the system has been designed to easily accommodate changes in the weapons and avionics of the actual B-52. Provisions have been made for instructor data gathering and scoring of trainee performance, and the requirements for software development are outlined. The instructor is provided with a three module console with access to the views being displayed in the WST, and is given broad selection in choosing the flight environment to which the trainees are subjected. M.S.K.

**A82-20772** # **Working in space.** G. V. Butler (McDonnell Douglas Astronautics Co., Huntington Beach, CA). Research sponsored by the American Institute of Aeronautics and Astronautics. New York, American Institute of Aeronautics and Astronautics (AIAA Aerospace Assessment Series. Volume 5), 1981. 134 p. 17 refs. Members, $20; nonmembers, $24.

The developing capability of human beings to work in space are examined, with consideration given to the lessons learned from previous U.S. and Soviet space missions. Noting the innovative measures taken by the crewmembers of the Apollo 13 flight to avert disaster, the equipment and procedures for spending extended periods of time in space which were developed and tested during the Skylab and Salyut missions are reviewed. Repairs were effected on the Skylab solar panels and psychological and physical requirements were defined, as were spacecraft re-entry profiles when the Skylab finally came down. The functions and the experimental packages designed for the Space Shuttle are described, with particular attention given to the equipment intended to provide a greater range of activity and usefulness for space activities. Finally, projections are made for future, expanded space missions, including the construction of large space structures, the use of manned orbit transfer vehicles, and the colonization of space and the moon. M.S.K.

**A82-20778** # **Flow visualization techniques in medical and biological applications.** W.-J. Yang (Michigan, University, Ann Arbor, MI). In: International Symposium on Flow Visualization, Bochum, West Germany, September 9-12, 1980, Preprints of Contributed Papers. Bochum, West Germany, Ruhr-Universität Bochum, 1981, p. 13-26. 60 refs.

The application of flow visualization techniques to medicine, pharmacology, and biology are reviewed. Contrast media, in liquid or gas state, or as fine particles suspended in solution, are used to intensify the image in contrast to its surrounding tissues through dyes, fluorescein, radioactive contrast media, and radioisotope-labeling. Dyes and optical methods are used most often, whereas photography and radiology are commonly used in either a single or sequential recordings. The morphology and functions of many biological systems may be observed by the unaided eye or with the aid of an optical instrument. A magnified image may also be produced by either (1) photographic or optical magnification; (2) direct geometric magnification; or (3) electronic magnification. J.F.

**A82-20853** * **Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980.** Colloquium supported by NASA. Edited by C. Ponnamperuma (Maryland, University, College Park, MD). Dordrecht, D. Reidel Publishing Co., 1981. 287 p. $39.50.

Papers are presented concerning the characteristics of comets and their possible role in the origin of life. Specific topics include the characteristics, origin and structure of the cometary nucleus, cometary chemical abundances, the nature of interplanetary dust and its entry into terrestrial planet atmospheres, and the mechanism of ray closure in comet tails. Attention is also given to chemically evolved interstellar dust as a source of prebiotic material, the relation of comets to paleoatmospheric photochemistry, comets as a vehicle for panspermia, limits to life posed by extreme environments, and the status of cometary space missions as of 1980. A.L.W.

**A82-20863** **Chemical evolution of interstellar dust - A source of prebiotic material.** J. M. Greenberg (Leiden, Rijksuniversiteit, Leiden, Netherlands). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 111-127. 12 refs. Research supported by the Stichting voor Fundamenteel Onderzoek der Materie and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek.

The chemical evolution of interstellar matter is examined in relation to the possibility of an extraterrestrial origin for prebiotic molecules. Theoretical and laboratory studies of the chemical evolution of interstellar dust grains are summarized which indicate a chemical composition at the time of the early pre-solar nebula of complex nonvolatile molecular mixtures of oxygen, carbon and nitrogen with hydrogen in addition to volatiles, which may be the predominant constituents of an accreting comet. The photoprocessing of interstellar material is found capable of converting on the order of 10% of all available carbon, oxygen and nitrogen into large molecules after 10 million years. Consideration of the possible mechanisms for the transport of interstellar organic molecules to the primitive earth indicates that direct accretion during the passage of the solar system through a dense interstellar cloud is a more likely source of prebiotic molecules than accretion from cometary material. A.L.W.

**A82-20864** **Comets and the origin of life - The stable isotope approach.** P. I. Abell (Cambridge University, Cambridge, England; Rhode Island, University, Kingston, RI), A. E. Fallick, N. J. McNaughton, and C. T. Pillinger (Cambridge University, Cambridge, England). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 129-139. 31 refs. Research supported by the Science Research Council, Natural Environment Research Council of England, and Nuffield Foundation.

An improved knowledge of the carbon isotopic composition of comets would be important in the establishment of links between comets and the origin of life on earth. The paper presents suggestions concerning a possible method for measuring stable isotope ratios in presumed terrestrial cometary debris or in situ. The method under development for carbon isotope measurements on Brownlee particles collected in the stratosphere involves static mass spectrometry with all carbon samples converted to CD4 by a gas phase process using D2 and a nickel catalyst. A cometary isotope front end reactor is also under development which would perform the same function on a space probe on a cometary fly-by mission. A.L.W.

**A82-20865** * **Are comets connected to the origin of life.** A. H. Delsemme (Toledo, University, Toledo, OH). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 141-159. 27 refs. NSF Grant No. AST-80-18919; Grant No. NsG-7381.

Possible connections between comets and the origin of life on earth are discussed. The orbital evolution of comets and their origin are considered within a framework for the origin of the solar system, with particular attention given to the origin of the biosphere, and the origin of the Oort cloud. Evidence suggesting that cometary nuclei are undifferentiated throughout is considered, and a model of the average composition of a mean new comet is obtained from observational data which is similar to that of an interstellar frost. The chemistry of the model composition giving rise to the species observed in cometary spectra is considered, as well as the relations of cometary to cosmic abundances of oxygen, carbon and sulfur. The characteristics of possible sites for prebiotic chemistry, including interstellar clouds, the protosolar nebula, comets in the Oort cloud, periodic comets and the primitive earth, are examined, and a possible role of comets in bringing the interstellar prebiotic chemistry to earth is suggested. A.L.W.

**A82-20866 #** **Comets and the photochemistry of the paleoatmosphere.** J. S. Levine, R. E. Boughner (NASA, Langley Research Center, Hampton, VA), T. R. Augustsson (Old Dominion University, Norfolk, VA), M. Natarajan (Joint Institute for Advancement of Flight Sciences, Hampton, VA), and L. J. Sacks (Christopher Newport College, Newport News, VA). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 161-190. 66 refs.

Ozone (O3) is a key atmospheric gas in considerations of the photochemistry/chemistry of the paleoatmosphere, chemical evolution, and the origin and evolution of life. The photochemistry/chemistry of atmospheric O3 in the paleoatmosphere is investigated using a one-dimensional photochemical model that includes the chemistry of oxygen, nitrogen, hydrogen, carbon, and chlorine gases. The role of cometary influx of H2O on the photochemistry of the paleoatmosphere is also examined. Recently, it has been suggested that the planet received a significant portion of the volatiles presently in the atmospheric/oceanic/biospheric system from cometary volatile influx. Several consequences of a cometary H2O influx on the photochemistry and structure of the paleoatmosphere are presented. (Author)

**A82-20867 #** **Cometary material and the origins of life on earth.** A. Lazcano-Araujo (Universidad Nacional Autónoma de México, Villa Obregón, Mexico) and J. Oro (Houston, University, Houston, TX). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 191-225. 180 refs. Research supported by the Consejo Nacional de Ciencia y Tecnologia; Grant No. NGR-44-005-002.

The role of cometary material in determining the environmental conditions of the prebiotic earth is reviewed. The organic synthesis pathways that occur in dense interstellar clouds and in comets are examined, and complex organic molecules believed to exist (amino acids, carboxylic acids, purines, pyrimidines and hydrocarbons) based on spectral detections of degradation products are noted. Estimates of the amount of terrestrial volatiles of cometary origin that may have been acquired in collisions during the early history of the earth are considered, and shown to dominate any estimated contributions to terrestrial carbon from other extraterrestrial sources. Current evidence that the origin and early evolution of life began about four billion years ago is discussed in relation to the cometary bombardment processes occurring at the time and the resultant shock waves, reducing atmospheres and reactive chemical species. It is thus concluded that comets contributed significantly to the processes of chemical evolution necessary for the emergence of life on earth. A.L.W.

**A82-20868** **Comets - A vehicle for panspermia.** F. Hoyle and C. Wickramasinghe (University College, Cardiff, Wales). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 227-239. 12 refs.

Arguments are presented for the panspermia hypothesis, according to which life is a phenomenon inherent in the cosmos, and for the role of comets in the transport, amplification and dispersal of life throughout the universe. Panspermia is shown to be a consequence of the observation that life is always derived from life, which observation is supported by the fossil record up to 3.83 billion years ago, when the Isua sediments were deposited. Problems with the probability of specifying the information necessary for living processes from an initially chaotic assemblage of biological monomers are discussed as evidence that life could not have arisen independently on earth, and astronomical evidence for the possibility of the interstellar dispersal of spores is noted. It is argued, however, that a more efficient process for the amplification and dispersal of life on a cosmic scale would be development and transport within comets. It is also shown that the properties of interstellar extinction may be explained by the bacterial nature of the interstellar grains. A.L.W.

**A82-20869** **Extreme environments - Are there any limits to life.** D. Kushner (Ottawa, University, Ottawa, Canada). In: Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, College Park, MD, October 29-31, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 241-248. 24 refs.

Limits to the environments in which microorganisms can survive and grow are considered in relation to the possibility of the existence and evolution of life on comets. Microbial growth in boiling and freezing water, conditions of high salinity, extreme acidity and alkalinity up to pH 11.5 and high radiation is discussed, and it is noted that the mechanisms of life under these extreme conditions appear similar to those under more normal conditions. It is observed that all growth requires relatively abundant amounts of liquid water, as growth does not take place within ice or water activities below 0.6 although organisms may survive much drier or colder conditions. It is concluded that unless comets have substantial zones of liquid water, terrestrial-type life cannot exist or arise there. A.L.W.

Papers are presented on various aspects of the origin of life as they relate to interstellar molecules, meteorites, the abiotic synthesis of small molecules, prebiotic polymerization, the origin of optical activity and the genetic code, early biochemical evolution, and fossils. Specific topics include the origin of organic molecules in interstellar space, the role of comets in the origin of life, the nitrogenous compounds in carbonaceous meteorites, the role of UV light and electric discharges in the chemical evolution of a reducing atmosphere, the role of clays as prebiotic photocatalysts and the formation of amino acids from sugars and ammonia in an ocean medium. Attention is also given to metal ion catalysis of the template-directed synthesis of oligoguanylic acids, the cold theory of the origins of life, the amplification of optical activity by crystallization processes, evolutionary processes of the genetic code, a search for primitive replication, the phylogentic sequence of metabolic pathways in the Precambrian, and the evolution of Rhodospirillaceae and mitochondria. A.L.W.

**A82-20903** **Interstellar molecules and the origin of life.** R. D. Brown (Monash University, Clayton, Victoria, Australia). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 1-8. 11 refs.

The hypothesis that life on earth arose not as a consequence of in situ chemical evolution but instead arrived at earth from interstellar space is considered. Problems with the orthodox view related to the probable nature of the original earth atmosphere and the accumulation of prebiotic molecules in the presence of solar UV radiation are first noted. The complex organic molecules detected in dark nebulae, from which stars and planetary systems are believed to be formed, are listed, and studies of the spectroscopic properties of gaseous forms of urea and glycine are noted. The collapse and heating of a dark cloud are considered, and evidence from carbonaceous chondrites that some cloud material is never heated above 100 C during star formation is noted. Hypotheses for the transport of complex organic material to earth in meteorites and the transport of life evolved in cometary nuclei to earth in micrometeorites are also considered. A.L.W.

**A82-20904** **On the origin of organic molecules in interstellar space and some of its consequences.** K. L. V. Johansson (Astronomiska Observatoriet, Uppsala, Sweden). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 19-26.

Possible sources for the complex organic molecules observed in interstellar space are examined, and consequences of the likley sources for the origin of life on earth are discussed. Calculations are presented which show that the amount of molecules that may have escaped from lifebearing planets such as earth is insufficient to account for the observed quantities of organic molecules in interstellar space. Rather, the molecules must have formed in interstellar clouds, either free in space or on the surfaces of grains. Such interstellar clouds may have been a source of organic compounds in the formation of the solar system, or may have deposited a substantial amount of organic molecules on earth as the solar system passed through a cloud. The subsequent chemical evolution of this material into biological molecules may be investigated by Urey-Miller type experiments with more complex starting mixtures than usual. A.L.W.

**A82-20905 *** **Comets and the origin of life.** W. M. Irvine (Onsala Space Observatory, Onsala, Sweden), S. B. Leschine, and F. P. Schloerb (Massachusetts, University, Amherst, MA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 27-32. 38 refs. Grant No. NGL-22-010-023.

The possible role of comets as sites for chemical and/or biological evolution is considered from both the positive and the negative viewpoints. On the negative side, it is pointed out that direct evidence for the chemical composition and size of cometary nuclei is lacking and the thermal history of comets is unknown, so that the length of time that liquid water could have been available ranges from zero to over a billion years. On the positive side, there remains the possibility that there may have been comets which retained liquid water in their interior for a sufficient time and that have more complex molecules than the amino acids and nucleic acid bases found in carbonaceous chondrities, and that the cometary environment may have been more favorable to the origin of life than the terrestrial. It has also been demonstrated that cometary material falls to earth at a significant rate. Problems in understanding the course of chemical evolution on earth may thus have a solution in cometary processes. A.L.W.

**A82-20906 *** **Nature and origin of organic molecules in comets.** A. H. Delsemme. In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 33-42. 29 refs. NSF Grant No. AST-79-14789; Grant No. NsG-7301.

The organic molecules sublimating from the cometary nucleus either represent the 'frost' of interstellar molecules that condensed onto those interstellar grains that have later accreted into comets, or they represent the 'snows' that condensed onto silicate grains during the cooling phase of the presolar nebula. Even if one does not accept the speculations of Hoyle and Wickramashinghe (1977), the fact that prebiotic chemistry could have been brought from the interstellar space or from the solar nebula to the Earth by comets is an intriguing possibility that cannot be ruled out at this stage. **A82-20907** **Liquid water on a planet over cosmic periods.** M. D. Papagiannis (Boston University, Boston, MA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 43-50. 13 refs.

From the equation that determines the average temperature of a planet, it is seen that even small changes in the distance, albedo and greenhouse effect of the planet, if not properly compensated, can eliminate liquid water from the surface of the planet through either runaway glaciation or a runaway greenhouse effect. Since active life requires the presence of liquid water, and since its evolution to higher intelligence seems to require billions of years, it follows that the ability of planets to maintain liquid water over cosmic periods is probably the critical factor that determines the abundance of advanced civilizations in the cosmos. **A82-20908 *** **Organic analysis of the Antarctic carbonaceous chondrites.** R. K. Kotra, A. Shimoyama, C. Ponnamperuma (Maryland, University, College Park, MD), P. E. Hare (Carnegie Institution of Washington, Washington, DC), and K. Yanai (National Institute of Polar Research, Tokyo, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 51-57. 14 refs. NSF Grants No. DPP-77-08993; No. DPP-79-00991; Grant No. NGR-21-002-317.

Thus far, organic analysis of carbonaceous chondrites has proven the only fruitful means of examining complex organic matter of extraterrestrial origin. The present paper presents the results of organic analysis of two Antarctic meteorites, Allan Hills (77306) and Yamato (74662), which may be considered free from terrestrial contamination. Ion-exchange chromatography, gas chromatography and mass spectrometery of meteorite samples reveal the presence in Yamato of 15 and in Allan Hills of 20 protein and nonprotein amino acids, the most abundant of which are glycine and alanine. Abundances of the D and L enantiomers of each amino acid are also found to be nearly equal. Data thus indicate an abiotic extraterrestrial origin for the matter, and confirm a lack of terrestrial contamination. A.L.W.

**A82-20909** **Nitrogen compounds in carbonaceous meteorites - A reassessment.** P. G. Stoks and A. W. Schwartz (Nijmegen, Katholieke Universiteit, Nijmegen, Netherlands). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 59-64. 28 refs.

A reinvestigation of the presence of N-heterocyclic compounds in the Murray, Murchison and Orgueil carbonaceous meteorites has been undertaken. The positive identification of the pyrimidine uracil and the purines adenine, guanine, xanthine and hypoxanthine is reported. The s-triazines melamine, ammeline, ammelide and cyanuric acid could not be detected in any meteorite, above a detection limit of 50 ppb. These results, together with laboratory data on the formation of s-triazines, are discussed in relation to proposed mechanisms of formation of organic compounds in carbonaceous meteorites. (Author)

**A82-20910** **Abiotic organic synthesis in space.** M. R. Bloch (Max-Planck-Institut für Kernphysik, Heidelberg, West Germany) and H. L. Wirth (Negev, University, Beersheba, Israel). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 65-71. 14 refs.

An experimental model for the formation of iron meteorites in space is presented which may also account for the presence of organic substances in comets and meteorites. The model consists of passing iron carbonyl and nickel carbonyl gas mixtures with H2S at 180 C between the poles of a permanent magnet. Strings of iron-nickel globules are formed which are similar in structure and chemical composition to the kamacite, taenite, troilite and pentlandite phases of meteorites. The carbonyl groups may then react in a Fischer-Tropsch-type reaction to form graphite and hydrocarbons, as observed in commercial processes. It is suggested that temperature gradients produced as comets near the sun may lead to the collection of metal carbonyls in the cometary interior, and that the resultant synthesis in a magnetic field may account for the optical activity of organic compounds. A.L.W.

**A82-20911** **Formation of prebiotic precursors from model reducing atmospheres - Role of hydrogen escape.** D. Mourey, F. Raulin, and G. Toupance (Paris XII, Université, Créteil, Val-de-Marne, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 73-82. 12 refs. Research supported by the Centre National d'Etudes Spatiales; Centre National de la Recherche Scientifique Grant No. 3721.

The influence of the atmospheric escape of hydrogen on the chemical evolution of a reducing atmosphere and on the synthesis of organic compounds within it is investigated. Experiments were performed in the absence of liquid water in a discharge chamber containing 50 torr CH3 and 100 torr gaseous H2O with palladium membranes to permit the escape of the H2 formed. In experiments performed without H2 escape, H2 rapidly becomes the most abundant product, and a steady-state CO/CO2 concentration ratio of about 7 is reached by the end of the experiment. In contrast, hydrogen escape during the course of the reaction causes a more rapid decline in CH4 concentration, decreases in CO and H2O concentration, and a steady state characterized by greater levels of CO2 than CO. The hydrocarbons formed are also observed to be more rapidly destroyed in the oxidizing atmosphere resulting from hydrogen escape, although hydrogen escape has no effect on the synthesis of oxygen-containing organics. A.L.W.

Research supported by the Centre National d'Etudes Spatiales.

**A82-20914 *** **Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter.** J. P. Ferris, J. Y. Morimoto, and R. Benson (Rensselaer Polytechnic Institute, Troy, NY). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 101-106. 13 refs. Grant No. NGR-33-018-148.

Methane, ammonia and phosphine are some of the possible constituents of the atmospheres of the Jovian planets and their satellites. Photolysis of NH3 in the presence of CH4 at 185 nm in the temperature range of 26 C to -100 C results in the decomposition of CH4. The reaction is inhibited by added H2 or SF6. These findings are consistent with the reaction of hot hydrogen atoms with CH4 to give the CH3 radical. P2H4 is the initial product formed by the photolysis of PH3 at 206 nm. Kinetic studies established that it is the intermediate in the formation of P4 from PH3. The potential significance of these reactions to the atmospheric photochemistry of the Jovian planets and moons is discussed. (Author)

**A82-20915 *** **Possible role of phosphine in chemical evolution.** F. Raulin (Paris XII, Université, Créteil, Val-de-Marne, France) and C. Ponnamperuma (Maryland, University, College Park, MD). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 107-114. 18 refs. Research supported by the Centre National de la Recherche Scientifique and NSF; Grant No. NGR-21-002-317.

Experiments simulating the formation of organic molecules in model reducing atmospheres including phosphine show that a variety of organic molecules can be synthesized. From the experiments using UV light as an energy source, it appears that the presence of phosphine drastically increases the yield of photolysis of methane and, thus, the yield of the formation of organic matter. The presence of phosphine enhances the formation of organophosphorous compounds, such as methyl and dimethylphosphine. (Author)

**A82-20916 *** **Clays as prebiotic photocatalysts.** L. M. Coyne, J. Lawless (NASA, Ames Research Center, Moffett Field, CA), N. Lahav (Jerusalem, Hebrew University, Rehovot, Israel), S. Sutton (Washington University, St. Louis, MO), and M. Sweeney (Santa Clara, University, Santa Clara, CA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 115-124. 24 refs.

Clay minerals catalyze peptide bond formation in fluctuating environments. A number of plausible mechanisms have been proposed and tested. The possibility that clays may actually be energizing the reaction by means of electronic excitation, creating mobile or trapped holes and electrons in the lattice, is explored. It has been discovered that clays emit light upon dehydration. The correlation between dehydration-induced, or thermoluminescent, processes and the yield of glycine oligomers after treatments known to affect the luminescent yields is being tested, in an effort to understand the catalytic mechanism. (Author)

**A82-20917 *** **Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay.** J. P. Ferris, K. W. Alwis, E. H. Edelson, N. Mount, and W. J. Hagan, Jr. (Rensselaer Polytechnic Institute, Troy, NY). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 125-128. 12 refs. NSF Grant No. CHE-76-11000; Grant No. NGR-33-018-148.

Montmorillonite clays which contain Fe(III) inhibit the oligomerization of aqueous solutions of HCN. The inhibitory effect is due to the rapid oxidation of diaminomaleonitrile, a key intermediate in HCN oligomerization, by the Fe(III) incorporated into the aluminosilicate lattice of the clay. The Fe(III) oxidizes diaminomaleonitrile to diiminosuccinonitrile, a compound which is rapidly hydrolyzed to HCN and oxalic acid derivatives. Diaminomaleonitrile is not oxidized when Fe(III) in the montmorillonite is reduced with hydrazine. The oxidation state of the clay is an important variable in experiments designed to simulate clay catalysis on the primitive earth. (Author)

**A82-20918** **Chemical evolution and plate tectonics.** D. E. Ingmanson (California, University, La Jolla, CA) and M. J. Dowler (San Diego State University, San Diego, CA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 129-134. 25 refs.

Laboratory analysis of Red Sea Atlantis II Deep brine solutions revealed a significant thiocyanate concentration (0.000024 M). Amino acid analysis revealed large quantities of glycine (about 1 micromole per liter), and no other dissolved free amino acids. This brine and the underlying sediment constitute a reducing, acidic, clay-rich, anhydrous-to-hydrous gradient system that can vary in temperature from 1100 C underlying magma to 63 C water. Since these conditions occur along a sea floor spreading zone, there may be an important link between the origin and evolution of the earth's crust and chemical evolution. (Author)

**A82-20919** **The Strecker synthesis in the primitive ocean.** S. L. Miller and J. E. Van Trump (California, University, La Jolla, CA). In: Origin of life; Proceedings of the Third ISSOL Meeting and

Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 135-141. 6 refs.

Most prebiotic amino acid syntheses proceed through the amino nitrile (Strecker synthesis). The equilibrium constants for the formation of glycine nitrile and alanine nitrile have measured as well as the kinetics of their hydrolysis to the amides and amino acids. From the data the yields of amino and hydroxy acids can be calculated as a function of pH, temperature and ammonia concentration. It can also be shown that amino acids can be synthesized at high dilutions in the primitive ocean. (Author)

**A82-20920 *** **Photoassisted carbon dioxide reduction and formation of two- and three-carbon compounds.** M. Halmann, B. Aurian-Blajeni (Weizmann Institute of Science, Rehovot, Israel), and S. Bloch (Paris XII, Université, Créteil, Val-de-Marne, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 143-150. 25 refs. Research supported by the U.S.-Israel Binational Science Foundation and NASA.

The photoassisted reduction of aqueous carbon dioxide in the presence of naturally occurring minerals is investigated as a possible abiotic precursor of photosynthesis. Aqueous carbon dioxide saturated suspensions or surfaces of the minerals nontronite, bentonite, anatase, wolframite, molybdenite, minium, cinnabar and hematite were irradiated with high-pressure mercury lamps or sunlight. Chemical analyses reveal the production of formic acid, formaldehyde, methanol and methane, and the two and three-carbon compounds glyoxal (CHOCHO) and malonaldehyde (CH2(CHO)2). It is suggested that such photosynthetic reactions with visible light in the presence of semiconducting minerals may provide models for prebiological carbon and nitrogen fixation in both oxidized and reduced atmospheres. A.L.W.

**A82-20921** **Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans.** A. Serban and A. Nissenbaum (Weizmann Institute of Science, Rehovot, Israel). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 151-156. 8 refs.

An environment in which oxygen is lacking, or at least depleted, is generally believed to be a prerequisite for abiotic organic synthesis. The present paper proposes melanoidin scavenging as an alternative to ferrous ion reactions as a sink for oxygen in the prebiotic atmosphere. Results are presented of experiments in which melanoidins, formed by the Maillard reaction between carbohydrates and amino acids, are allowed to react with molecular oxygen. In all glucose-amino acid mixtures investigated, oxygen concentration in the gas phase above the reacting mixture is found to decrease as the reaction proceeds, with the oxygen consumption rate dependent on the nature of the amino acid as well as the temperature. Variations in the oxygen consumption rate also indicate the presence of several intermediates in melanoidin-polymer synthesis. It is concluded that the prebiotic formation of amine and carbohydrate monomers should lead to the generation of melanoidin-like polymers which, as they condense, would remove oxygen into ocean sediments. A.L.W.

**A82-20922** **Formation of energy rich phosphate in Fenton's reaction.** O. Saygin and P. Decker (Hannover, Tierärztliche Hochschule, Hanover, West Germany). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 157-164. 28 refs.

The oxidation of various substrates by a modified Fenton's reagent is examined as a possible source of radical intermediates capable of incorporating phosphate or acylate ions into energy-rich compounds, under prebiotic conditions. Experiments were performed in systems of Na2HPO4.2H2O, FeSO4.7H2O, ascorbic acid, amd EDTA at 0 C with H2O2 or O2 added as the oxidant and substrates including imidazoles, purines, pyrimidines, cyanamide, and formamide. Yields of up to 32% inorganic phosphate transformed into organic form are obtained with 2-methylimidazole as the substrate, with positive results also found in reactions with imidazole, 1-methylimidazole, 4-hydroxymethylimidazole, histamine, and pyrimidine. The organic phosphate formed from 2-methylimidazole has been shown to be an alkali-labile phosphoric acid ester of a 4,5-dihydroxyimidazoline. Results emphasize the importance of reactions, such as those involving coupling between energy and group transfer, in the first steps of chemical organization in open systems capable of generalized Darwinian evolution. A.L.W.

Mora (Iasi, Institutul Politehnic, Iasi, Rumania). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 189-196. 16 refs.

Investigations into the synthesis of porphyrins, carried out according to 'the cold theory' of the appearance and evolution of the first living forms, showed that porphyrin-like pigments are formed in abiotic simulated conditions. Parallel studies on the classical organic synthesis of porphyrins indicated that pyrrole and formaldehyde were involved in their abiogenesis. The ready formation of these compounds - and especially that of their metallic chelates - in abiotic conditions is significant, suggesting the possibility of their appearance and intervention during the early stage of chemical evolution. **A82-20928 *** **Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides.** A. D. Patel, W. H. Schrier, M. A. Hrncir, and J. J. Nagyvary (Texas A & M University, College Station, TX). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 201-207. 14 refs. NASA-supported research.

A mechanism is proposed for the prebiotic synthesis of deoxyribonucleotides and possible nucleic acid analogs from ribonucleotides by a pathway involving 2'-thio-2'-deoxyribonucleosides. The mechanism is supported by laboratory experiments in which 2'-thio-2'-deoxycytidine was synthesized from anhydro arabinosyl cytosine in dithiophosphate and CS2. The subsequent reduction of the thio-analogs has been achieved with ferrous ion, and photochemically. It is noted that the proposed pathway for prebiotic deoxyribonucleotide synthesis is in harmony with the Principle of

Continuity, as both the proposed and present pathways rely on the reduction of a 2' functional group. A.L.W.

**A82-20929 *** **Factors influencing the rate of non-enzymatic activation of carboxylic and amino acids by ATP.** D. W. Mullins, Jr. and J. C. Lacey, Jr. (Alabama, University, Birmingham, AL). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 209-216. 12 refs. Grant No. NGR-01-010-001.

The nonenzymatic formation of adenylate anhydrides of carboxylic and amino acids is discussed as a necessary step in the origin of the genetic code and protein biosynthesis. Results of studies are presented which have shown the rate of activation to depend on the pKa of the carboxyl group, the pH of the medium, temperature, the divalent metal ion catalyst, salt concentration, and the nature of the amino acid. In particular, it was found that of the various amino acids investigated, phenylalanine had the greatest affinity for the adenine derivatives adenosine and ATP. Results thus indicate that selective affinities between amino acids and nucleotides were important during prebiotic chemical evolution, and may have played a major role in the origin of protein synthesis and genetic coding. In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 225-232. 20 refs. Grant No. NGR-44-005-002.

**A82-20932 *** **Template-directed synthesis of oligoguanylic acids - Metal ion catalysis.** P. K. Bridson, H. Fakhrai, R. Lohrmann, L. E. Orgel, and M. van Roode (Salk Institute for Biological Studies, San Diego, CA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 233-239. 7 refs. Grants No. NGR-05-067-001; No. NIH-GM-13435.

The effects of Zn(2+), Pb(2+) and other metal ions on the efficiency and stereo-selectivity of the template-directed oligomerization of guanosine 5'-phosphorimidazolide are investigated. Reactions were run in the presence of a polyC template in a 2,6-lutidine buffer, and products analyzed by high-performance liquid chromatography on an RPC-5 column. The presence of the Pb(2+) ion is found to lead to the formation of 2'-5' linked oligomers up to the 40-mer, while Zn(2+) favors the formation of predominantly 3'-5' linked oligomers up to the 35-mer. When amounts of uracil, cytidine or adenosine 5'-phosphorimidazole equal to those of the guanosine derivative are included in the reaction mixture, the incorrect base is incorporated into the oligomer about 10% of the time with a Pb(2+) catalyst, but less than 0.5% of the time with Zn(2+). The Sn(2+), Sb(3+) and Bi(3+) ions are also found to promote the formation of 2'-5' oligomers, although not as effectively as Pb(2+), while no metal ions other than Zn(2+) promote the formation of the 3'-5' oligomers. The results may be important for the understanding of the evolution of nucleic acid replication in the absence of enzymes. A.L.W.

**A82-20933** **Chemical evolution of model systems of primeval earth periphery and thermal polymerisation of aqueous solutions of cyanides.** F. Stoetzel and R. Buvet (Paris XII, Université, Créteil, Val-de-Marne, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 241-246. 6 refs.

**A82-20934** **The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin.** S. Morimoto, K. Kawashiro, H. Yoshida, and K. Sugiura (Tokushima University, Tokushima, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 247-254.

The separation of the products of the polymerization of alpha-aminopropionitrile (APN) on Amberlite CG-50 cation-exchange resin is discussed. The polymerization products, which were formed from the reaction of APN with alpha, alpha-prime-iminodipropionitrile at 0 C over the course of eight years, underwent batch separation with Amberlite CG-50 equilibrated with water to yield the acidic and neutral component, equilibrated with aqueous acetic acid to yield the weakly basic component, and equilibrated with ammonia to yield the basic component. Each component was then fractionated through a Sephadex G-10 column to separate polymer and oligomer sections. Amino acid analysis was performed on the gel-filtration fractions of each component, indicating the peptide, peptide amide and peptide nitrile nature of the acidic and neutral, weakly basic, and basic components, respectively, as well as the presence of imino compounds in each component. A.L.W.

**A82-20935** **The cold theory of the origins of life - Assumptions for the theory and experimental evidence.** C. I. Simionescu and F. Denes (Institute of Macromolecular Chemistry, Iasi, Rumania). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 255-262. 13 refs.

Experimental results obtained in low temperature conditions and using a cold plasma as an energy source are presented as a basis for a cold theory of the origins of life. Reasoning that a recombination of active species does not occur in chemical thermodynamics, experiments were performed to find evidence that macromolecular precursors to living matter accumulated on ice-covered surfaces. Polypeptide-like and polysaccharide-like materials were formed when a feed composition of NH3 was injected into an apparatus which modeled the early earth's environment by having ice at -60 deg at the bottom of a reactor and an RF electrode to create a plasma on the top. Protobiopolymers were found to form lipid-like structures which self-assembled and exhibited membrane-like structures with electrical properties suggestive of reversible transducers of various kinds of energies. M.S.K.

**A82-20936** **The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life.** C. I. Simionescu, F. Denes, and M. Totolin (Institute of Macromolecular Chemistry, Iasi, Rumania). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 263-269. 14 refs.

Analyses of the reaction products of an RF cold plasma discharge in a mixture of CH4, NH3, and H2O gases which formed protobiopolymers are reported. Polypeptide and polysaccharide type substances were formed in the presence of dominant concentrations of NH3 and H2O, while methane dominated mixtures yielded lipid-like structures. Spectral analyses, chromatography, gel permeation measurements, elemental analysis, electron microscopy, SEM, and optical microscopy were employed, and it is noted that the lipid-like materials are induced to form specific orientations to the fluid medium and form organized entities with protomembranes. Double layers were found in the microspheres, which had a membrane potential of 30 mV. Microsphere-assisted phosphorylation was investigated starting from KH2PO4, and yielded a polyphosphate, which is considered significant for early bioenergetical processes. M.S.K.

**A82-20937 *** **Terrestrial evolution of polymerization of amino acids - Heat to ATP.** S. W. Fox and T. Nakashima (Miami, University, Coral Gables, FL). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 271-276. 10 refs. Grant No. NGR-10-007-008.

Sets of amino acids containing sufficient trifunctional monomer are thermally polymerized at temperatures such as 65 deg; the amino acids order themselves. Various polymers have diverse catalytic activities. The polymers aggregate, in aqueous solution, to cell-like structures having those activities plus emergent properties, e.g. proliferatability. Polyamino acids containing sufficient lysine catalyze conversion of free amino acids, by ATP, to small peptides and a high molecular weight fraction. The lysine-rich proteinoid is active in solution, within suspensions of cell-like particles, or in other particles composed of lysine-rich proteinoid and homopolyribonucleotide. Selectivities are observed. An archaic polyamino acid prelude to coded protein synthesis is indicated. (Author)

**A82-20938** **Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation.** E. Kokufuta and K. Harada (Tsukuba, University, Sakura, Ibaraki, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980.
Dordrecht, D. Reidel Publishing Co., 1981, p. 277-284. 10 refs.

Potentiometric titrations of thermally prepared polyamino acids were carried out at different ionic strengths. The intrinsic dissociation constants of carboxyl groups or amino groups in the polymers were evaluated by the curves of the apparent dissociation constant against the degree of dissociation and the Henderson-Hasselbalch plots. The ratio of alpha- and omega-linkages of amino acid residues was also evaluated by the analysis of the titration data. (Author)

**A82-20939** **On the polycondensation of amino acid adenylates on montmorillonites.** F. R. Eirich (New York, Polytechnic Institute, Brooklyn, NY). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 285-293. 9 refs.

A number of studies on the mechanisms of adsorption underlying the catalysis mechanism show, at least, three types of adsorption, i.e. two ion exchange mechanisms on clay faces and edges, and a general, possibly ion-pair mediated, polar adsorption. X-ray data on dry clay-peptide sandwiches show clearly adsorption in well defined layers, while analysis of rates of polymerization, of blocking experiments of clay agglomeration, and of the effects of polypeptide preadsorption show that the clay faces and edges are involved in the enhancement of the polycondensation which also requires that the clay platelet stacks can expend by interlayer adsorption during the reaction. (Author)

**A82-20940 *** **Polymerization of serine guanylate in the presence of montmorillonite.** M. Paecht-Horowitz (Jerusalem, Hebrew University, Rehovot, Israel). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 295-299. 7 refs. Grant No. NGR-33-006-070.

Serine guanylate was prepared and its polymerization studied in the presence of montmorillonite and in its absence. In water, without clay, serine guanylate polymerizes in the same way as does serine adenylate. In the presence of montmorillonite, serine guanylate polymerizes to a lesser extent and produces also lower degrees of polymerization than does serine adenylate. It is postulated that the reason for this difference in behavior might lie in the fact that guanylic acid is much more acidic than adenylic acid; hence would bind much more strongly to the edges of montmorillonite and thus, by blocking these sites, would inhibit the catalytic activity of the clay. **A82-20942** **Environmental conditions for the formation of marigranules and kinetic studies on the formation.** H. Yanagawa and F. Egami (Mitsubishi-Kasei Institute of Life Sciences, Tokyo, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 309-312. 5 refs.

Highly organized particles, 'marigranules', were found to be produced from glycine and acidic, basic, and aromatic amino acids in a modified sea medium. The marigranules had membrane-like structures and were packed with polymers having molecular weights of 1,800, 6,800, 15,000, and 82,000 daltons. It is considered that these marigranules represent a new type of protocell-like structures that were present on the primitive earth. The environmental conditions for the formation of marigranules are described and kinetic studies made on them are presented. Among amino acids, tryptophan was an essential amino acid for the formation of marigranules and among the metal components of modified sea medium, cupric ion was absolutely necessary for the formation of marigranules. The form of marigranules was dependent on temperature and time. The time course for the formation of these marigranules was oscillatory. (Author)

**A82-20943 *** **Membrane lipids and the origin of life.** J. Oro, G. Holzer, M. Rao (Houston, University, Houston, TX), and T. G. Tornabene (Colorado State University, Fort Collins, CO). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980.
Dordrecht, D. Reidel Publishing Co., 1981, p. 313-322. 36 refs. Grant No. NGR-44-005-002. Contract No. EE-77-5-02-4478.

The current state of knowledge regarding the development of biological systems is briefly reviewed. At a crucial stage concerning the evolution of such systems, the mechanisms leading to more complex structures must have evolved within the confines of a protected microenvironment, similar to those provided by the contemporary cell membranes. The major components found normally in biomembranes are phospholipids. The structure of the biomembrane is examined, and attention is given to questions concerning the availability of the structural components which are necessary in the formation of primitive lipid membranes. Two approaches regarding the study of protomembranes are discussed. The probability of obtaining ether lipids under prebiotic conditions is considered, taking into account the formation of cyclic and acyclic isoprenoids by the irradiation of isoprene with UV. G.R.

**A82-20944** **Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants.** E. Gil-Av, A. Tishbee, S. Weinstein (Weizmann Institute of Science, Rehovot, Israel), and P. E. Hare (Carnegie Institution of Washington, Washington, DC). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 323-330. 15 refs.

Chiral recognition through coordination to a metal ion used in conjunction with a chromatographic mode of operation is reported as a method of improving the techniques of enantiometric analysis. Dissolving a chiral coordination complex in an aqueous mobile phase led to resolution of underivatized amino acids obtained by using as a support either a cation exchange resin or a reversed phase silica gel. Eluates are detected by post-column derivatization to fluorescent compounds. A reversed phase column was found to be more efficient for determining the resolution factor for enantiomer emergence than by use of an exchange resin, and chiral recognition was discovered to occur mainly in the mobile phase. Picomoles of eluate were observable, but only with primary, rather than secondary amino groups. M.S.K.

**A82-20945** **Stereoselective interactions of small biological molecules.** Y. H. Kim, A. Tishbee, and E. Gil-Av (Weizmann Institute of Science, Rahovot, Israel). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 331-336. 19 refs.

Work being done on charge transfer complexation and chiral recognition is surveyed, with attention given to its extension to stationary phases consisting of relatively small biological molecules. The experiments reported deal with the resolution of synthetic molecules, the helicenes, not found in nature. They focus attention on the discrimination of certain optical isomers by biological substances through the combined effect of charge transfer complexation and chiral recognition through a sugar residue. These observations are thought to be of considerable interest since modern carbohydrate chemistry puts much emphasis on the information content of sugars and their functions in molecular recognition. It is noted that, by examining, as stationary phases, a systematically modified series of compounds, the influence of structural factors on chiral recognition could be investigated and eventually a model for the mechanism evolved. C.R.

A82-20948 * **Possible selective adsorption of enantiomers by Na-montmorillonite.** E. Friebele, A. Shimoyama, and C. Ponnamperuma (Maryland, University, College Park, MD). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 337-346. 13 refs. NSF Grant No. EAR-77-00013; Grant No. NGR-21-002-317.

Racemic amino acids including (D,L) alpha-alamine, (D,L) alpha-aminobutyric acid, (D,L) valine, and (D,L) norvaline were incubated with Na-montmorillonite at 100% CEC at three hydrogen ion concentrations, and amino acid adsorption was determined by ion exchange chromatography. Enantiomers were analyzed by gas chromatography. Differences in the quantities of D and L enantiomers in any of the fractions was no larger than a few percent. Although a large difference in the adsorption of the amino acid enantiomers was not observed, the analysis may indicate a small preferential adsorption (0.5-2%) of L-amino acids by Na-montmorillonite. V.L.

A82-20949 **Asymmetrical radical formation in beta-irradiated D- and L-alanines.** M. Akaboshi, M. Noda, K. Kawai, H. Maki, and K. Kawamoto (Kyoto University, Osaka, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 373-378. 5 refs.

It was demonstrated that the relative radical concentration was distinguishably higher in D-alanine than in L-alanine when irradiation was carried out by using a yttrium-90 beta-ray source. On the other hand, when irradiation was carried out by using non-polarized beta-rays derived from a Van de Graaf generator, no such difference was observed in the radical formation of both alanines. The results suggested that some process being involved in the parity non-conservation in a beta-decay must play an important role in the observed phenomenon. (Author)

A82-20951 **Competition, coexistence and irreversibility in models of early molecular evolution.** C. Blomberg, G. von Heijne, and O. Leimar (Kungl. Tekniska Hogskolan, Stockholm, Sweden). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 385-392. 5 refs.

Mathematical models of prebiotic systems are considered for particular applications to the cases of irreversibility and coexistence in early molecular evolution. It is found that irreversibility in biologic systems is not well defined, and several models are considered which are limited by monomer availability. Attention is paid to a linear model, where fitness results in the survival of a specific polymer over another through more successful use of available monomers, to a model of hypercycle growth, where evolution must occur within a cycle by species which require fewer monomers. Consideration is also given to a dimerization model, where different species will coexist while monomer concentrations will decrease, to a model for the incorporation of monomers by one species to form another species, to coexistent hypercycle systems in niches beside one another, and to a steady-state existence between two species unable to eliminate one another, implying coexistence in prebiotic conditions. M.S.K.

A82-20952 * **Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments.** D. H. White and J. C. Erickson (Santa Clara, University, Santa Clara, CA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 393-397. Research supported by the Research Corp.; Grants No. NCA2-OR-685-708; No. NCA2-OR-685-806.

Histidyl-histidine is a remarkably effective catalyst of peptide bond formation in the reaction of glycine in a fluctuating (hot-dry, cold-wet) clay environment. It has shown turnover numbers (molecules of glycine incorporated in oligoglycines per molecule of catalyst) as high as 18 in a single cycle and as high as 52 overall. A number of other dipeptides were tested, as well as monomeric histidine, N-acetyl histidine, and imidazole, none of which showed turnover numbers greater than one. Histidyl-histidine is a model for a prebiotic protoenzyme, and implications for the development of a simple translation mechanism are discussed. (Author)

A82-20953 **A mathematical method for the enumeration of doublet codes.** G. Cullmann (Institut Georges Gamow, Clermont-Ferrand, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 405-413. 7 refs.

A single nonsense mutation is a mutation of a codon outside its code, wherein only one base changes under the mutation. The best code is one which has the minimum number of single nonsense mutations and, therefore, a definite Hamming's distance. The Hamming's distance (Hamming, 1950) represents the maximum number of codons which differ in one base only. All the codes for a given Hamming's distance can be listed by a process known as combinatory analysis. A simple example of theoretical doublet codes with four bases is presented; it is maintained, however, that the method can be extended to any length, and in particular, to triplet codes. J.F.

A82-20954 * **Evolving nucleotide binding surfaces.** T. Kieber-Emmons and R. Rein (Roswell Park Memorial Institute, Buffalo, NY). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 415-422. 14 refs. Grant No. NsG-7305.

An analysis is presented of the stability and nature of binding of a nucleotide to several known dehydrogenases. The employed approach includes calculation of hydrophobic stabilization of the binding motif and its intermolecular interaction with the ligand. The evolutionary changes of the binding motif are studied by calculating the Euclidean deviation of the respective dehydrogenases. Attention is given to the possible structural elements involved in the origin of nucleotide recognition by non-coded primordial polypeptides. (Author)

A82-20955 **Origin and evolution of the genetic code.** M. Shimizu (Tokyo, University, Tokyo, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 423-430. 23 refs.

A hole on a complex of anticodon and discriminator base on a tRNA has a key hole - key relation to the side chain of the corresponding amino acid. The protein synthesis system might have evolved so that it could have continuously utilized the above stereochemical discrimination scheme. 'Half tRNA' might have been the form of the primitive tRNA and the primitive ribosome might have had a hairpin structure with two CAAGR on both sides of it. (Author)

A82-20956 **The origin and evolution of the genetic code.** A. Figureau (Lyon I, Université, Villeurbanne, Rhône, France) and J.-M. Labouygues (Institut Georges Gamow, Clermont-Ferrand, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 431-437. 13 refs.

A quantitative model is examined, which suggests that the present genetic code appeared under the influence of mutations and evolved by optimizing its resistance to their effects. The number of sense codons grew progressively, whereas the number of terminators decreased. The most important constraint is due to the selection against the appearance of nonsense codons. The competition between ancestor codes favors those which best resist mutational effects leading to nonsense. The structure of the selected systems converges towards that of the present genetic code. (Author)

**A82-20957** **Evolutionary processes of the genetic code.** T. Noguchi (Tokyo College of Economics, Kokubunji, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 439-446. 7 refs.

Evolution of the genetic code is analyzed in terms of codon-reading ability and amino-acid-recognizing ability. Three basic rules are formulated in relation to the codon-reading ability of tRNAs which make it possible to classify the evolution of this ability into seven stages according to the degree of perceptivity of codon-anticodon interaction. Evolutionary trees are presented for tRNAs which show how tRNAs are related to one another. V.L.

**A82-20958** * **Summary of evidence for an anticodonic basis for the origin of the genetic code.** J. C. Lacey, Jr. and D. W. Mullins, Jr. (Alabama, University, Birmingham, AL). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 447-456. 27 refs. Grant No. NGR-01-010-001.

This article summarizes data supporting the hypothesis that the genetic code origin was based on relationships (probably affinities) between amino acids and their anticodon nucleotides. Selective activation seems to follow from selective affinity and consequently, incorporation of amino acids into peptides can also be selective. It is suggested that these selectivities in affinity and activation, coupled with the base pairing specificities, allowed the origin of the code and the process of translation. (Author)

**A82-20959** **Primitive transfer RNA and origin of Darwinian system.** M. Ishigami (Jichi Medical School, Minamikawachi, Tochigi, Japan) and M. Kinjo (Utsunomiya University, Utsunomiya, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 457-464. 22 refs.

The effect of polynucleotide and polypeptide on the formation of polypeptide is tested in order to support the theory that the protein synthesis mechanism originated in the stepwise evolution of polynucleotides, which not only activate amino acids, but evolve to produce better polypeptides for probionts as well (Ishigami et al., 1977). The basic protein, histone, is found to promote the reaction of polypeptide formation from aminoacyl adenylate. The relationship between the origin and development of the genetic code and the increase of the invariable site in protein in the course of molecular evolution is discussed. Finally, an analogy is drawn between the learning system and Darwinian evolution. J.F.

**A82-20960** **Evolution of the terrestrial atmosphere and its fossils in biosystems.** M. Shimizu (Tokyo, University, Tokyo, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 465-471. 18 refs.

Various fossil vestiges of C3O2 and HC[illegible]O polymers can be found in the living biosystem, and are thought to have resulted from the presence of CO in the primitive earth atmosphere. The possible evolutional route of the genetic code is derived by combining the discussion of Eigen and Schuster (1978) for the formation of mRNA and that of Egami (1979) for the classification of amino acids and nucleic acid bases in relation to the genetic code. The codes are specified by a series of 3rd-2nd-1st anticodons, and the C4N holes for the terminators are both small. It is found that fossil vestiges of C3O2 appear most clearly in the sequence serine-leucine-phenylalanine, while those of HCHO appear most clearly in the sequence glycine-alanine-asparatic acid. Thus, the classified evolutional route of the genetic code provides good evidence for a primitive environment, especially for a primitive atmosphere consisting of CO and N2. J.F.

**A82-20961** **Organic geochemistry of the Isua supracrustals.** C. Walters, A. Shimoyama, and C. Ponnamperuma (Maryland, University, College Park, MD). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 473-479. 21 refs. NSF Grants No. DPP-77-08993; No. DPP-79-00991.

The Isua supracrustals of western Greenland are the oldest terrestrial rocks known, dated at greater than 3,750 m.y. Metamorphosed to lower amphibolite facies, they still can provide indications of their original environment of deposition. Graphite is widely dispersed throughout the meta-sediments, particularly within the ironstones. Most of the graphite is very well ordered. However, several samples show a marked disorder of crystallinity. These samples, when pyrolyzed at high temperatures, liberate organic fragments of low molecular weight (m/e less than 200). The fragments suggest that at least some of the Isua graphite is derived from condensation of kerogen. Carbon isotope data has been interpreted as indication of photosynthetic fractionation. Whether the original organics, which are now seen as graphite, were biologically produced has not yet been unequivocally established. The pyrolyzed organics detected within the meta-sediments may well be the oldest molecular fossils yet found on the earth. (Author)

**A82-20962** **Secondary structures of polypeptides as evolutionary growing points.** H. Baltscheffsky (Stockholm, Universitet, Stockholm, Sweden). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 481-486. 9 refs. Statens Naturvetenskapliga Forskningsrad Grant No. 2292-100.

The formation of beta-pleated sheet structures in experiments on Clostridia-type ferredoxin apoproteins has revealed secondary structures which may serve to orient appropriate cysteine sulfur residues to bind 2 Fe atoms in two 4(Fe + S) cubes. The beta-structures then disappear, yielding a hydrogen bond change which holds significance in the protein function. Three-dimensional structures are formed by concerted hydrogen bond formation, some in which reversible, functionally useful changes are regarded as evolutionary growing points that are a basis for more complex three-dimensional patterns found in present-day proteins. M.S.K.

**A82-20963** **Search for primitive replicative properties on early polypeptides.** A. Brack and G. Spach (CNRS, Centre de Biophysique Moléculaire, Orléans, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 487-493. 9 refs.

The sequences of polypeptide chains which are built up with alternating hydrophilic-hydrophobic residues concentrate themselves in the beta-pleated sheet conformation when dissolved in salted water. The sheets are more stable than the alpha-helix and are shown to constitute a pathway to the enrichment in one enantiomer. They are considered as a single system with potential template activity. (Author)

**A82-20964** **Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution.** C. M. Visser (Groningen, Rijksuniversiteit, Groningen, Netherlands). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 495-504. 37 refs.

Bioorganic chemical analysis of present-day coenzyme mechanisms (via chemical models) can reveal something about the stage of evolution of life in which those cofactors were introduced (and vice versa). Some cofactors date back to the time before the origin of the genetic code (RNA-like metabolism) whereas others are relatively recent. Flavin prosthetic groups are anomalous however, in that they have pre-genetic code structures but a great number of post-genetic code functions (oxygen handling) and reaction mechanisms. The recent isolation of a deazaflavin cofactor from one of the Archaebacteria suggests a possible way out of this dilemma. The significance of this for present-day flavoenzyme mechanisms is discussed. (Author)

**A82-20965** **Selective acylability of amino acids by nonenzymic model reactions of biochemical transacylations.** D. Brice, L. Le Port, and R. Buvet (Paris XII, Université, Créteil, Val-de-Marne, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980.

Dordrecht, D. Reidel Publishing Co., 1981, p. 505-511. 18 refs.

The results of experiments on the acylability of various amino acids by differing acyl donors to study the reactions of biochemical transacylations are reported. The reactions were performed in aqueous solutions with no enzymes and a small presence of hydroxyl ions. Data on the acetylation yield obtained from acetylthioglycolate, acetylthiocholine, and acetylphosphate show that the acetylation yields of hydrocarbonated side chain amino acids are highest with acetylthioglyconates, an inversion of the acetylation yields between two thioesters occurs for amino acids which have a thiol function, reactions from the hydroxylated side chain amino acids result in lower acetylation yields, and specifically high acetylation yields are obtained in the case of cysteine and homocysteine acetylation. Finally, it was found that, in the nonenzymatic conditions in primitive synthesis of polypeptides, the hydrophobic character of the amino acid chains influences the NH2 reactivities of the compounds with respect to their acetylation with acetyl donors.
M.S.K.

**A82-20966** **Experiments on transfer of organic molecular information into crystal lattice superstructures.** P. Decker and H. Schweer (Hannover, Tierärztliche Hochschule, Hanover, West Germany). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 513-520. 22 refs.

Evolution in bioids, open systems which can exist in several steady states involves the accumulation of information relevant to its selection value, i.e. in the simplest case, the choice by mutation of the most stable steady state (species). Therefore it appears problematical how alien information like nonstatistical structures arising in mineral crystallization or in interplanetary carbon compounds found in meteorites could become incorporated into the terrestrial biosphere. In contrast, an interaction of evolving biosystems with inorganic matter, involving temporal storage of bioinformation in crystal structures, appears more compatible with the bioid concept. A model of how three independent messages can be stored in a three-dimensional lattice is presented. As a first experimental approach, attempts to induce information from linear biomolecules into a nonstatistical distribution of components of mixed crystals are reported.

**A82-20967 *** **Phylogenetic sequence of metabolic pathways in Precambrian cellular life.** J. Barnabas (Ahmednagar College, Ahmednagar, India), R. M. Schwartz (National Biomedical Research Foundation, Washington, DC), and M. O. Dayhoff (Georgetown University, Washington, DC). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 521-528. 56 refs. Grant No. NIH-GM-08710; Contract No. NASw-3317.

A sequence of major metabolic events is presented as they may have appeared during prokaryote evolution. This is based on (1) the phylogenetic schema derived from sequences of bacterial ferredoxin, 2Fe-2S ferredoxin, 5S ribosomal RNA, and c-type cytochromes; (2) metabolic settings in which these macromolecules are found; and (3) metabolic capabilities of the prokaryotes that carry these molecules.

**A82-20968** **Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization.** P. Decker (Hannover, Tierärztliche Hochschule, Hanover, West Germany). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 529-536. 31 refs.

Life is modelled as a thermodynamically dissipative mechanism, and the chemical reactions most amenable to the formation of 'bioids' which form and change from one generation to the next are examined. The self-organization is assumed to occur on a planetary surface exposed to 6000 deg light quanta, in the availability of reactive chemicals, with nonenzymatic catalysts being present, and with macromolecules able to mediate the reactivity through catalytic concentration of metal ions. The model is taken to indicate that experimentation should look for photochemical reactions with autocatalytic feedback which yield an organization into cycles in a steady state scenario. The oxidation of methane is mentioned for the production of formaldehyde and the autocatalytic formation of sugars from the formaldehyde, and experiments on a nonenzymatic photophosphorylation is described as an example of the synthesis of energy rich intermediates.

**A82-20969** **Ultraviolet selection pressure in the Prephanerozoic.** M. B. Rambler (Boston University, Boston, MA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 537-542. 34 refs.

The late appearance of metaphyta and metazoa in the fossil record has often been attributed to low concentrations of ambient oxygen and restriction of organisms to shielded habitats due to intense ultraviolet selection pressure (Berkner-Marshall hypothesis). Microorganisms examined for survival as a function of UV dosage consistently exhibit a capacity for radiation resistance and repair. Comparisons of lethal UV dosages of various microbes to calculations of present solar UV fluxes at 253.7 nm result in an average radiation tolerance of 30 minutes. However, inspection of survival of protected cells increases radiation tolerance by three orders of magnitude or 24 hours of continual radiation exposure. The observation of protective mechanisms in extant microbes may be legacies from UV exposure in the Prephanerozoic. Radiation resistance taken together with the well preserved microbiota known from the Prephanerozoic suggests the Berkner-Marshall hypothesis to be indefensible.

**A82-20970** **DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria.** M. Ohba and T. Oshima (Mitsubishi-Kasei Institute of Life Sciences, Tokyo, Japan). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 543-549. 17 refs.

**A82-20971 *** **The evolution of blue-greens and the origins of chloroplasts.** R. M. Schwartz (National Biomedical Research Foundation, Washington, DC) and M. O. Dayhoff (Georgetown University, Washington, DC). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 551-558. 28 refs. Contract No. NASw-3317; Grants No. NIH-GM-08710; No. NIH-RR-05681.

All of the available molecular data support the theory that the chloroplasts of eukaryote cells were originally free-living blue-greens. Of great interest is what the relationships are between contemporary types of blue-greens and eukaryote chloroplasts and whether the chloroplasts of the various eukaryotes are the result of one or more than one symbiosis. By combining information from phylogenetic trees based on cytochrome c6 and 2Fe-2S ferredoxin sequences, it is shown that the chloroplasts of a number of eukaryote algae as well as the protist Euglena are polyphyletic; the chloroplasts of green algae and the higher plants may be the result of a single symbiosis.

**A82-20972 *** **Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data.** M. O. Dayhoff (Georgetown University, Washington, DC) and R. M. Schwartz (National Biomedical Research Foundation, Washington, DC). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 559-566. 22 refs. Contract No. NASw-3317; Grant No. NIH-GM-08710.

New sequence data from several protein families and from 5S ribosomal RNA confirm and elaborate a previously proposed description of the phylogenetic connections between a variety of bacteria and the eukaryotes. Probably, the first organisms were nonphotosynthetic anaerobic prokaryotes, which were followed soon by photosynthetic anaerobes. From this photosynthetic stock, the aerobic line to Pseudomonadacae, Rhodospirillaceae, and blue-greens arose. The eukaryotes derived genetic material from the symbioses of at least three separate bacterial lines. Ancestors of Rhodopseudomonas globiformis gave rise to the eukaryote mitochondria, probably through at least three separate symbioses, one early on the flagellate line, one on the ciliate line, and one on the stem to the multicellular forms. A82-20973 **On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies.** J. Seckbach (Jerusalem, Hebrew University, Jerusalem, Israel) and J. F. Fredrick (Dodge Chemical Co., Bronx, NY). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 567-574. 43 refs.

A82-20974 **Microbial life in cold saline environments.** S. B. Leschine, K. J. Miller, and R. L. Huguenin (Massachusetts, University, Amherst, MA). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 575-582. 22 refs.

Microorganisms form Dry Valley (Antarctica) soils, from Great Salt Lake (Utah, USA) water, and from refrigerated salt codfish were enriched and isolated at 5 C in media containing high concentrations of salts. The microbial flora that developed varied considerably depending on the source of the inoculum. A variety of morphologically distinct microorganisms was isolated. Most isolated strains grew over a wide range of temperature (e.g., 0-25 C) and salt concentration (e.g., 0.1-2 M NaCl) suggesting that the evolutionary strategy for adaptation of these organisms to low temperature and high salt involved an increased tolerance of (rather than dependance on) these extreme conditions. A82-20975 * **Mutagens and carcinogens - Occurrence and role during chemical and biological evolution.** A. Giner-Sorolla (Sloan-Kettering Institute for Cancer Research, New York, NY) and J. Oro (Houston, University, Houston, TX). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 583-588. 28 refs. Grants No. NIH-CA-08748; No. NGR-44-005-002.

The roles of mutagenic and carcinogenic substances in early biologic evolution is examined, along with terrestrial and extraterrestrial sources of mutagens and carcinogens. UV solar radiation is noted to have served to stimulate prebiotic life while also causing harmful effects in plants and animals. Aromatic compounds have been found in meteorites, and comprise leukemogens, polycyclic hydrocarbons, and nitrasamine precursors. Other mutagenic sources are volcanoes, and the beginning of evolution with mutagenic substances is complicated by the appearance of malignancies due to the presence of carcinogens. The atmosphere of the Precambrian period contained both mutagens and early carcinogens and, combined with volcanic activity discharges, formed an atmospheric chemical background analogous to the background ionizing radiation. Carcinogenesis is concluded to be intrinsic to nature, having initiated evolution and, eventually, cancer cells. M.S.K.

A82-20976 **Could the biochemical metabolism be different.** R. Buvet (Paris XII, Université, Créteil, Val-de-Marne, France). In: Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 589-599. 8 refs.

The inevitableness of life having formed from the reactivities of carbonaceous molecules with derivatives of oxygen, sulfur, nitrogen, phosphorus, and some metallic ions and complexes is examined. Consideration is given to redox processes, condensations, the synthesis of chemical bonds, additional bonds, reciprocal eliminations, enol-oxo polymerizations, and the isoprenyl pyrophosphate polycondensations. Restrictions for biochemical processes are defined, and standard potentials which define the transition from a nonoxydized carbon atom to an alcohol or ethylenic group, alcohol to an aldehydic or ketonic group, and an aldehydic group to a carboxylic group are explored. The transitions are found to occur at the lowest energy levels possible, considering that they take place at room temperature. Life then formed from reactions which were determined from the physico-chemical properties of the carbonaceous compounds in aqueous media. M.S.K.

A82-21208 * **Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum.** K. D. Pang, J. M. Ajello (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), S. F. S. Chun (California, University, San Francisco, CA), Z. Nansheng (Beijing Planetarium, Beijing, People's Republic of China), and L. Minji (Beijing Glass Institute, Beijing, People's Republic of China). *Nature*, vol. 295, Jan. 7, 1982, p. 43-46. 45 refs. NASA-sponsored research.

Viking Lander biology experiment gas chromatography-mass spectrometer analysis has detected no organic molecules above a concentration of parts per billion. The questions considered here include the reason for the lack of organic molecules at the landing sites, whether the sterility of the two sites is representative of the whole of Mars, and whether there may be locations more conducive to organic compound formation and preservation. After simulating the destruction of organic compounds in Mars-like laboratory conditions and examining whether the destructive mechanism might obtain throughout the planet, UV and IR reflectance spectra are re-examined for any evidence of organic molecules and an upper limit is determined for organic carbon content of average Martian soil. It is found that the average Martian soil is poor in inorganics, presents a poor habitat for carbon chemistry-based life forms, and is not likely to preferentially preserve such organisms anywhere on the planet. O.C.

A82-21213 **Body temperature changes during the practice of g Tum-mo yoga.** H. Benson, J. W. Lehmann (Beth Israel Hospital, Boston, MA), M. S. Malhotra (Netaji Subhas National Institute of Sports, Patiala, India), R. F. Goldman (U.S. Army, Research Institute of Environmental Medicine, Natick, MA), J. Hopkins (Virginia, University, Charlottesville, VA), and M. D. Epstein (Harvard University, Boston, MA). *Nature*, vol. 295, Jan. 21, 1982, p. 234-236. 16 refs. Research supported by the American Institute of Indian Studies, Fleischmann Foundation, and Fetzer Foundation; NSF Grant No. INT-80-16982; Grants No. NIH-HL-22727; No. NIH-HL-07374.

It is reported that three practitioners of the Tibetan Buddhist meditational practice known as g Tum-mo, or heat yoga, have exhibited the capacity to deliberately increase the temperature of their fingers and toes by as much as 8.3 C. Skin temperatures were measured in the area of the navel and lumber region, the nipple, the left forearm, the left fifth finger nailbed, the left calf, the left toe nailbed, and the forehead. The ages of the three subjects were 46, 50 and 59 years. It is suggested that the physiological mechanism responsible for the marked increase of finger and toe temperature recorded is vasodilation. O.C.

A82-21299 **Microelectronics and computers in medicine.** J. D. Meindl (Stanford University, Stanford, CA). *Science*, vol. 215, Feb. 12, 1982, p. 792-797. 56 refs.

Computer use in medicine and medical research is discussed, along with the applications of microelectronics in biosystems. Systems for experimentation demand consideration of the uses of microelectronic sensors for acquiring data bases and for implantable telemetry. Data gathered from 'under the skin' are much harder than personal descriptions of medical history, and can be directly input to a computer for analysis. The computer's role in medical decision-making processes is examined, including the implications of CAT scans as an effective diagnostic tool. Numerous routine and specially ordered hospital tests can be automatically performed under computer control, and the data stored, correlated, and selectively displayed on demand. Additionally, results which are regarded as abnormal can be scanned for automatically and the physician notified. M.S.K.

A82-21454 # **Electroencephalographic correlates of the hemispheric functional asymmetry in the human brain (Elektroentsefalograficheskie korreliaty funktsional'noi asimmetrii bol'shikh polusharii mozga cheloveka).** E. A. Zhirmunskaia, V. S. Losev, and T. P. Evpakova (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 13, Jan.-Mar. 1982, p. 42-65. 58 refs. In Russian.

Recent work concerning the background electroencephalographic correlates of the functional asymmetry of the left and right cerebral hemispheres connected with speech, visual, auditory or spatial perception, and other forms of mental activity is reviewed. Following a brief summary of current formulations of the problems of the relation of psychological and physiological phenomena and hemispheric asymmetry in performing the same functions on different levels, a review is presented of the goals, methods and results of experimental studies in the literature of the past 3-4 years. Attention is then given to the results of three series of experiments conducted by the present authors concerning the general characteristics of EEG changes during changes in cerebral functional condition, EEG changes in different regions of the brain, and EEG changes in different cerebral functional conditions. The potential of electroencephalography for further studies of hemispheric functional asymmetry and interactions is also discussed. A.L.W.

**A82-21455** † **The structural and functional organization of the ventrolateral nucleus of the thalamus (Strukturno-funktsional'naia organizatsiia ventrolateral'nogo iadra talamusa).** L. V. Cherenkova and A. S. Batuev (Leningradskii Gosudarstvennyi Universitet, Leningrad, USSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 13, Jan.-Mar. 1982, p. 66-88. 163 refs. In Russian.

Literature data concerning the structure and functional organization of the ventrolateral nucleus (VLN) of the thalamus and its connections with various brain structures engaged in the processing of information necessary for the integration of motor activity is reviewed. The three types of neurons making up two zones of the VLN are distinguished, and connections of the VLN are examined, including somatic afferents, afferents from the cerebellum, fornix, thalamic nuclei and cortex, and efferents to the sensorimotor cortex. The structural data are noted to suggest that the VLN plays an important role in the organization of the cerebellar-thalamic-cortical system. Physiological data on neuronal activity, the control of cerebellar impulse transmission, control on the part of the cortex and the role of the VLN in motor organization is considered, and the role of the structure in filtering sensory information to allow the initiation and realization of motion is emphasized. A.L.W.

**A82-21456** † **Cellular mechanisms of the Frank-Starling phenomenon (Kletochnye mekhanizmy fenomena Franka-Starlinga).** V. Ia. Izakov, V. S. Markhasin, Iu. L. Protsenko, and O. N. Bershitskaia (Sverdlovskii Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Sverdlovsk, USSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 13, Jan.-Mar. 1982, p. 89-108. 100 refs. In Russian.

Recent data concerning the cellular basis for the relation between length and tension discovered in skeletal and myocardial muscle by Frank and serving as the basis of Starling's law of the heart is reviewed. The general characteristics of the relation between initial muscle length and isometric contraction in skeletal muscle and the myocardium are discussed, and ultrastructural evidence is presented which shows that changes in the overlap between the thick and thin sarcomeric filaments are insufficient to explain the length-tension relation. Studies of the influence of initial length on the calcium activation of myofibrils are then presented which demonstrate that inotropic factors act through both electromechanical coupling and calcium activation to influence contractile forces. A.L.W.

**A82-21457** † **Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots (Izmenenie tsitokhimicheskikh pokazatelei uglevodnogo obmena neitrofilov perifericheskoi krovi letchikov).** P. S. Pashchenko. *Voenno-Meditsinskii Zhurnal*, Dec. 1981, p. 52, 53. In Russian.

Glycogen levels and phosphorylase enzyme activities in the peripheral blood neutrophils of pilots are measured as indicators of the effects of flight stress on carbohydrate metabolism and physiological condition in general. Blood samples were taken from 21 pilots 1 to 1 1/2 hours before and 10 to 15 min after flight, and compared with those of age-matched healthy controls. In 82% of the subjects, preflight glycogen levels are found to be about equal to or even exceed control values. Post-flight glycogen levels are observed to depend on the preflight values, increasing in those with initially low values, decreasing in those with slightly higher levels, and remaining the same for those with normal or greater than normal values. The results are explained in terms of the effects of sympatho-adrenal and parasympathetic hormones on the activity of the phosphorylase enzyme, which activates the cellular breakdown of glycogen. A.L.W.

**A82-21470** † **Filtration properties of receptive fields of visual-cortex neurons (Fil'tratsionnye svoistva retseptivnykh polei neironov zritel'noi kory).** Iu. E. Shelepin (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 261, no. 6, 1981, p. 1506-1509. 8 refs. In Russian.

An analysis is presented of the amplitude spatial-frequency characteristics of the neuron receptive fields in the visual cortexes of 36 cats. The general filtration properties (i.e., the isolation of spatial frequency and image orientation) were determined for receptive fields situated in various projection zones of the visual cortex, and a relationship between image orientation, spatial frequency, and neuron response was established. B.J.

**A82-21676** **Effects of long-term exposure to low levels of ozone - A review.** C. E. Melton (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 105-111. 39 refs.

Available literature regarding long-term effects of ozone on animals and humans is reviewed. This review shows that ozone concentration is more important than duration of exposure in determining the effects of an ozone exposure. This conclusion calls into question the validity of the time-weighted average as an index of severity of ozone exposure. The literature review further reveals a wide variation in susceptibility of different animal species to ozone, making it difficult to apply results of animal experiments to humans. It further appears that a dose of ozone that is acutely innocuous is also innocuous over the long term. The effects of a symptom-producing dose of ozone are initially cumulative for the first two or three exposures; then an adaptive response may ensue that involves a plateau of response or even a reversal. These effects are shown by both animals and humans. The mechanisms are unknown. Ozone probably causes damage by free radical formation. Free radical scavengers, such as vitamins E and C, may provide protection against ozone damage. (Author)

**A82-21677** **A study of treadmill exercise protocols for Chinese males.** B.-L. Ho (Institute of Aviation Medicine, Taipei, Republic of China). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 112-116. 14 refs. Research supported by the National Science Council of the Republic of China.

**A82-21678** **The effect of two years' training of aerobic power and muscle strength in male and female cadets.** W. L. Daniels, J. E. Wright, D. S. Sharp, D. M. Kowal, R. P. Mello, and R. S. Stauffer (U.S. Army, Research Institute of Environmental Medicine, Natick, MA; U.S. Military Academy, West Point, NY). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 117-121. 10 refs.

The considered investigation is concerned with a comparison of the responses of male and female cadets to extended military training at the U.S. Military Academy. During the course of the study, the training program of both male and female cadets was similar and, in some respects, identical. Volunteer cadets, 11 males and 7 females, completed all phases of this study. On all strength measures, the values for female cadets averaged approximately 30-40% lower than for males. The female cadets did not significantly narrow the gap with male cadets in terms of muscle strength and aerobic power, even after 2 years of similar training. These results indicate that post-pubertal females are unable to reduce the difference between themselves and males, even after extended training in a situation where many social, cultural, and environmental factors are very similar. G.R.

**A82-21679** **Psychological testing at high altitudes.** M. Nelson. *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 122-126. 20 refs.

Psychological testing was done on 20 subjects at various altitudes (sea level, 3,810 m, and 5,000 m) during a 35-d mountaineering expedition to Denali (Mt. McKinley). Intellectual functioning and personality changes were studied. While little variation was noted at the lower altitude, at 5,000 m there was a marked deterioration in cognitive ability. This was accompanied by a sharp increase in paranoia and obsessive-compulsiveness and smaller increases in depression and hostility. (Author)

**A82-21680** **Effects of relative metabolic rate and heart rate variation on the performance of flight attendants.** T. Yoshioka, M. Narusawa, K. Nagami, C. Yabuki, Y. Nakahara, S. Nakano (Tokai University, Isehara, Japan), C. Sekiguchi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan), K. Noda (Japan Air Line Co., Ltd., Health Control Service Div., Tokyo, Japan), T. Nagai, and Y. Kobayashi (Jikei University, Tokyo, Japan). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 127-132. 15 refs.

**A82-21681** **Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit.** M. H. Laughlin, J. W. Burns, and M. J. Parnell (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 133-141. 43 refs.

The F-16 and other recently developed high-performance aircraft can produce levels of +Gz (head-to-foot acceleration) which may exeed man's physiologic tolerance for +Gz stress. In this connection, it is pointed out that the effects of +Gz on regional flow and resistance in humans have remained a subject for conjecture. An investigation was, therefore, conducted to obtain information regarding this important subject. Eight female baboons were used in the experiments, because the baboon is a subhuman primate which is phylogenetically close to man. The results of the experiments demonstrate that, in baboons, +Gz stress causes a significant decrease in cardiac output and a redistribution of blood flow away from visceral organs. Acceleration exposure had no statistically significant effect on blood flow to the cerebrum, cerebellum, or brain stem. G.R.

**A82-21682** * **The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey.** D. T. Dickey, G. E. Billman, K. Teoh, H. Sandler, and H. L. Stone (Oklahoma, University, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 142-146. 18 refs. Grant No. NsG-2282.

To simulate the weightless condition, eight rhesus monkeys, instrumented with solid-state pressure transducers, were horizontally restrained in body casts for 28 days. Blood volume decreased an average of 13% after 14 days of restraint, due mainly to a drop in plasma volume. Aortic pressure and heart rate responses to norepinephrine and phenylephrine decreased after 14 days of restraint. The monkeys did not show a statistically significant decreased tolerance to a 90 deg sudden upright tilt after horizontal restraint. During the fifth week of casting, four animals were subjected to +Gz acceleration tests on a centrifuge. The acceleration tolerance of the casted monkeys was significantly reduced compared to four similarly instrumented control animals. These findings indicate that the cardiovascular deconditioning associated with simulated weightlessness results from an inability to maintain central blood volume during orthostatic stress. (Author)

**A82-21683** **Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering.** J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 147-152. 34 refs.

A description is presented of the effects of exhaustive simulated aerial combat +Gz stress on the amplitudes of the P, QRS, and T waveforms as seen on the surface electrocardiogram. Twenty-two healthy males were exposed to an exhaustive simulated aerial combat maneuver (SACM) +Gz profile. It was found that marked changes in the electrocardiographic amplitudes occur as a result of exhaustive SACM + Gz stress. Positional, pressure/volume, humoral and electrolyte changes may all be significant causative factors either alone or in combination. Attention is given to T-wave response to exercise and training, hyperkalemia as an etiology for T-wave changes, T-wave response to +Gz stress, catecholamines as an etiology for T-wave changes, QRS response to exercise and clinical considerations, and QRS response to +Gz stress. G.R.

**A82-21684** **Posturography of ataxia induced by Coriolis- and Purkinje-effects.** C. Fitger and T. Brandt (Alfried Krupp von Bohlen und Halbach Krankenhaus, Essen, West Germany). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 153-161. 33 refs. Research supported by the Deutsche Forschungsgemeinschaft.

One aim of the study is to provide information on clinical vertigo symptoms. Standing on a rotatable stabilometer, 25 healthy subjects execute lateral head tilts during (Coriolis), or after (Purkinje), rotation with different constant velocities. The conditions are varied with respect to eyes open vs eyes closed, head upright vs head tilted to the right and left, direction of rotation (clockwise vs counterclockwise), head tilt (active vs passive), and body rotation (active vs passive). The results are as expected in that destabilization is less severe with open than closed eyes and that sway amplitudes are increased after head tilt as well as with a higher velocity of rotation. The direction of the induced body shift is also as expected, opposite to the initial vestibular stimulus. A forward shift after stop without head tilt is frequently found, being independent of the previous direction of rotation. Reported perceptions coincide mostly not with the initial vestibular signal but with the actual movement of compensation. C.R.

**A82-21685** **A statistical examination of three approaches for predicting motion sickness incidence.** D. E. Smith (Desmatics, Inc., State College, PA). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 162-165. 6 refs. Contract No. N00014-74-C-0154. NR Project 207-037.

This paper examines three approaches which have been suggested for predicting motion sickness incidence (MSI) for actual or simulated broadband ship motion. Although only a small amount of empirical MSI data exists for motion other than that produced by a single sinusoid, this data provides strong statistical evidence that two approaches based on single sinusoid models fail to produce accurate predictions. Statistical judgments about a least-squares weighting approach must be reserved until enough data exists to provide an adequate test. In view of these results, it must be concluded that much empirical research remains to be done in order to develop a reasonably accurate method of predicting motion sickness incidence for broadband motion. (Author)

**A82-21686** **Difference between eye closure and visual stabilization in the control of posture in man.** P. P. Vidal, A. Berthoz, and M. Millanvoye (CNRS, Laboratoire de Physiologie Neurosensorielle; Conservatoire National des Arts et Métiers, Paris, France). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 166-170. 11 refs.

Stabilizing the visual surroundings of human subjects influences postural control during perturbations of their equilibrium. The latency of the first EMG burst is increased and its amplitude is reduced. Body pitch is 36 percent stronger than with normal vision. Eye closure does not produce any significant modification of muscular responses and postural performance. This result explains why vision is not considered a rapid source of postural reaction. Eye closure cannot be considered to be visual deprivation. (Author)

**A82-21687** **Cardiovascular origins of heatstroke pathophysiology - An anesthetized rat model.** A. J. Kielblock, N. B. Strydom (Chamber of Mines Research Organization, Johannesburg, Republic of South Africa), F. J. Burger, M. Manjoo (Durban-Westville, University, Durban, Republic of South Africa), and P. J. Pretorius (Potchefstroom University for Christian Higher Education, Potchefstroom, Republic of South Africa). *Aviation, Space, and Environmental Medicine*, vol. 53, Feb. 1982, p. 171-178. 43 refs.

A reappraisal of the nature and sequence of early circulatory responses to heat stress is undertaken by subjecting male albino rats to an environmental temperature of 45 C at 15% relative humidity until overt circulatory failure occurs. Although the initial circulatory responses are normal for mild exertion, an inapparent circulatory crisis develops, which is thought to be a result of the abolishment of compensatory splanchnic vasoconstriction. The impending threat of functional hypovolemia is, temporarily at least, obscured by cardiac compensation; the extent of cardiovascular commitments may, therefore, have been underestimated. This also indicates that cardiovascular adjustments during the stress of heat may prove to be an essential feature of heatstroke pathophysiology. C.R.

**A82-21700** **The prevalence of visual deficiencies among 1979 general aviation accident airmen.** J. R. Dille and C. F. Booze, Jr. (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine,* vol. 53, Feb. 1982, p. 179-182. 5 refs.

The reported study of 1979 accidents shows that the relatively small number of pilots with aphakia and artificial lens implants, as well as the total eye pathology population, had significantly higher accident rates, but the monocular pilots did not. There are questions about the functional importance of 20/30 and 20/40 best corrected visual acuity in one case, and entry of 'no fusion' in another, and the dynamic, peripheral, depth and accommodative performance of several with appreciable pathology who have a corrected central acuity of 20/20. It is recommended to continue investigations of the considered type. The obtained findings should be taken into account in the design of research on contemporary problems in aviation medicine. Meanwhile, continuing emphasis must be placed on the accurate measurement of visual functions required for medical certification in communications with FAA aviation medical examiners. G.R.

**A82-21701** † **The economy of muscular work during unfused tetanus (Ekonomichnost' raboty myshts v rezhime zubchatogo tetanusa).** V. S. Gurfinkel' and Iu. S. Levik (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR). *Biofizika,* vol. 26, Mar.-Apr. 1981, p. 371-373. In Russian.

The economy of skeletal muscle work, defined as the relation between tension produced and energy utilized in a given time, during the three stages of unfused tetanus in humans is investigated. Measurements of intramuscular temperature were made under local blood arrest during sustained isometric tetanus of the flexor digitorum superficialis stimulated at a frequency of 9.5 pulses/sec, and compared with measurements of the tension of the second phalange of the fourth finger. The rate of temperature rise is found to be greatest in tetanus phase II, which is characterized by the largest tension oscillations and extends from the 5th to the 30th second of contraction. The economy of muscle contraction is accordingly 1.3 to 1.7 times lower at this stage than at the beginning of tetanus. In phase III, where increased mechanical efficiency is obtained, the muscle economy is also found to rise progressively, reaching a final level 3.5 times greater than initial by the 40-50th second of contraction. A.L.W.

**A82-21702** † **A mathematical model of cell populations with stem cells (Matematicheskaia model' kletochnoi populiatsii so stvolovymi kletkami).** A. M. Zhabotinskii (Nauchno-Issledovatel'skii Institut po Biologicheskim Ispytaniiam Khimicheskikh Soedinenii, Kupavna, USSR). *Biofizika,* vol. 26, Mar.-Apr. 1981, p. 329-332. 7 refs. In Russian.

The principal properties of stationary tissue populations are explained within the framework of a hypothesis stating that the binding of chalone, a tissue inhibitor, by a stem cell results in asymmetric cell division with the formation of a daughter stem cell and a partially differentiated cell. A chalone-free stem cell divides symmetrically yielding two daughter stem cells. V.L.

**A82-21703** † **Functional model of the conversion of stationary signals in the auditory analyzer (Funktsional'naia model' preobrazovaniia statsionarnykh signalov v slukhovom analizatore).** E. G. Kernitskaia (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Biofizika,* vol. 26, May-June 1981, p. 517-521. 14 refs. In Russian.

A model for spectral processing in the auditory analyzer is developed which consists of three layers: (1) a layer of filters whose characteristics imitate the masking curves; (2) a layer of nonlinear converters whose nonlinearity parameters are chosen in such a way that the calculated results correspond to the basic characteristics of the perception of stationary-signal loudness; and (3) a layer of lateral inhibition. This model can distinguish the formant structure of sound in a synthetic speechlike signal; at low frequencies up to 1000 Hz the first harmonics are distinguished in addition to the formants. B.J.

**A82-21704** † **Differentiation of muscles on the basis of trace-element composition (Razlichiia myshts po mikroelementnomu sostavu).** M. M. Ogievetskaia (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR), O. D. Maslov (Ob'edinennyi Institut Iadernykh Issledovanii, Dubna, USSR), and N. S. Shelud'ko (Akademiia Nauk SSSR, Institut Biologii Moria, Vladivostok, USSR). *Biofizika,* vol. 26, May-June 1981, p. 512-516. 7 refs. In Russian.

X-ray fluorescence analysis was used to perform a comparative evaluation of the compositions of trace elements in phasic and tonic muscles of the scallop Patinopecten Yessoensis. It is shown that the phasic muscles are richer in Fe and Cu, while the tonic muscles are richer in Zn, Br, and Sr; there is no difference in Rb content. The results make it possible to classify Fe, Cu, Zn, Br, and Sr according to their properties connected with various homeostatic requirements of the muscles with respect to the trace elements. B.J.

**A82-21705** † **Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes (Agregatsiia molekul rodopsina pri povrezhdaiushchem deistvii sveta na fotoretseptornye membrany).** I. D. Pogozheva, V. A. Kuznetsov, I. B. Fedorovich, V. A. Livshits, M. A. Ostrovskii, and N. M. Manoshkina (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Biofizika,* vol. 26, July-Aug. 1981, p. 692-700. 20 refs. In Russian.

Rhodopsin aggregation and structural changes in the photoreceptor membranes under the damaging effects of visible light are investigated. The rotational mobility of spin-labeled rhodopsin in the photoreceptor membrane was studied by means of saturation-transfer ESR spectroscopy, and concentrations of various rhodopsin oligomers, rhodopsin SH-group oxidation levels and the degree of lipid membrane peroxidation were determined in suspensions of frog outer segment rods irradiated at 100,000 lux. Photooxidation of the photoreceptor membrane is found to lead to a reduction in rhodopsin mobility within the membrane which is attributed to the irreversible molecular aggregation as a result of the formation of disulphide bonds between hydrophobic SH groups on the rhodopsin molecule. A decrease in lipid microviscosity and degree of order is observed upon membrane photodestruction, in contrast to the significant increase in microviscosity observed upon oxidation in the presence of Fe ions. Lipid oxidation is also shown to accelerate protein aggregation, which in turn influences the lipid bilayer. A.L.W.

In Russian.

**A82-21712 † The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension (Rol' natriiureza v profilakticheskom effekte adaptatsii k gipoksii pri nasledstvennoi gipertonii).** F. Z. Meerson, N. A. Barbarash, G. Ia. Dvurechenskaia, and N. S. Prokina (Akademiia Meditsinskikh Nauk SSSR, Moscow; Kemerovskii Meditsinskii Institut, Kemerovo, USSR). *Kardiologiia,* vol. 21, July 1981, p. 25-32. 27 refs. In Russian.

Experiments on male Wistar rats and rats with spontaneous hereditary hypertension (SHH) showed that the development of SHH was accompanied by a significant decrease in the renal excretion of water and sodium. Acute hypoxia in Wistar rats resulted in a significant decrease in diuresis, glomerular filtration, and K and (insignificantly) Na excretion, while in SHH rats acute hypoxia increased diuresis significantly and enhanced Na and K excretion. Adaptation to hypoxia during six hours per day resulted in an increase of diuresis, glomerular filtration, Na excretion, and the Na/K coefficient of urine in both Wistar and SHH rats. During the first month of adaptation changes were more pronounced in SHH rats than in Wistar rats; as a consequence, the hypertension did not develop in SHH rats. It is concluded that the natriuretic effect is probably the main mechanism of the prophylactic effect of adaptation to hypoxia on the development of hereditary hypertension. B.J.

**A82-21713 † The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress (Vliianie dvigatel'noi aktivnosti na vozniknovenie serdechnykh aritmii pri eksperimental'nom emotsional'nom stresse).** L. S. Ul'ianinskii, T. G. Urmancheeva, E. P. Stepanian, A. A. Fufacheva, A. V. Gritsak, B. A. Kuznetsova, and A. A. Kvitka (Akademiia Meditsinskikh Nauk SSSR; Moskovskii Inzhenerno-Fizicheskii Institut, Moscow, USSR; Akademiia Meditsinskikh Nauk SSSR, Sukhumi, Georgian SSR). *Kardiologiia,* vol. 21, Oct. 1981, p. 64-67. 18 refs. In Russian.

Investigations on monkeys and rabbits have shown that emotional stress can produce various disorders of the heart rhythm: sinus tachycardia, atrial fibrillation, ventricular extrasystoles, and paroxysmal ventricular tachysystoles. Under these conditions the adrenaline content in the blood and myocardium increases three-to-four times, while the noradrenaline level increases in the blood and decreases in the myocardium. Marked motor activity leads to an increase of the adrenaline and noradrenaline level in the myocardium and to the development of disorders of cardiac rhythm including ventricular fibrillation. B.J.

**A82-21719 † Oxygen transport in dogs native to high altitudes during exercise (Transport kisloroda u sobak-aborigenov vysokogor'ia pri fizicheskikh nagruzkakh).** M. V. Balykin (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Kirgiz SSR). *Akademiia Nauk Kirgizskoi SSR, Izvestiia,* Mar.-Apr. 1981, p. 66-72. 24 refs. In Russian.

Parameters characterizing oxygen transport during exercise of stepwise increasing intensity are investigated in dogs native to high altitudes. Measurements of blood pH, oxygen and carbon dioxide tensions, acid-base balance, temperature and hemoglobin concentration in arterial and venous blood were made in dogs native to altitudes of 760 m and 2700 m at rest and during 10-min recovery periods between treadmill exercise at speeds of 5, 10, 15 and 20 km/h. At rest, the high-altitude dogs exhibit a shift in acid base-balance towards the side of respiratory alkalosis with respect to the controls, as well as high arterial blood oxygenation and oxygen utilization in the presence of reduced oxygen transport. Moderate exercise under low-altitude conditions is observed not to decrease arterial blood oxygenation, while intense muscular work may lead to arterial hypoxemia. Exercise in mountain natives, however, induces a slight reduction in arterial oxygenation and a marked venous hypoxemia. Results demonstrate the efficiency of the respiratory and circulatory systems of high-altitude natives during exercise. A.L.W.

**A82-21720** † **Disturbances in biological rhythms as a result of a conflict of incompatible stimuli (Narusheniia biologicheskikh ritmov kak rezul'tat konflikta nesovmestimykh pobuzhdenii).** V. A. Zotov and V. A. Nepomniashchikh (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Zhurnal Obshchei Biologii,* vol. 42, July-Aug. 1981, p. 622-627. 5 refs. In Russian.

The organization of the groups of oscillators believed to control the rhythmic activities of an organism is investigated in studies of the consequences of the superposition of incompatible stimuli. The characteristics of foreleg cleaning behavior in the mite Varroa jacobsoni and of the circadian motility cycle in the beetle Trigonoscelis gigas were observed under stressful conditions: isolation from the host in the first case and constant temperature and illumination in the second. The experiments have shown the behavioral acts consisting of the cleaning of the right and left limbs in mites and burrowing into the soil and emerging from it in beetles to be under the control of separate oscillators, as they are characterized by different periodicities. As the phases of the rhythms controlled by these oscillators begin to overlap, conflict behavior is observed, and arrhythmias and other disturbances of the rhythm appear. A.L.W.

A. Serebrennikova and N. I. Kolesova (Tomskii Meditsinskii Institut, Tomsk, USSR). *Radiobiologiia,* vol. 21, July-Aug. 1981, p. 577-581. 17 refs. In Russian.

The effects of high-energy betatron irradiation and the preliminary injection of cystamine on erythrocyte protein metabolism are investigated. Determinations of total, amine, urea and residual nitrogen, free amino acid, and proteolytic enzyme activities were made in rabbits before and up to 30 days after exposure to 10 gram-roentgens of 25-MeV betatron radiation. Ionizing radiation is found to lead to the activation of erythrocyte proteolytic enzymes, resulting in the breakdown of endogenous proteins and an increase in the nitrogenous products of protein metabolism. The preliminary intravenous injection of cystamine reduces the deleterious effects of radiation on protein metabolism, and increases the survival rate after 30 days from 67 to 82%. A.L.W.

Al'tman (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Oct.-Dec. 1981, p. 28-51. 76 refs. In Russian.

The literature on the localization of nonmoving and moving sound sources is surveyed in an effort to study the basic characteristics of the depth perception of moving sources. It is shown that there is a critical time interval for the formation of the perception of moving sources. The differential sensitivity of the auditory system for the perception of moving sources is higher than for the localization of nonmoving sources. The neurophysiological aspects of the spatial localization of moving sound sources are examined with particular attention given to the role of central auditory neurons. B.J.

**A82-21728** † **Pulmonary shunting and its regulation (Legochnyi shunt i ego reguliatsiia).** L. G. Dukov (Smolenskii Meditsinskii Institut, Smolensk, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Oct.-Dec. 1981, p. 112-128. 104 refs. In Russian.

On the basis of studies of ventilation-perfusion relationships, recent data on the mechanisms governing the development and regulation of pulmonary shunting are presented. The ability of existing techniques to measure and separate the shunting is discussed in detail. It is found that in healthy subjects shunting derives from two causes. The first is an anatomic shunting, that is, the discharge of venous blood through bronchial veins into the pulmonary veins and along the thebesian channels into the left heart. The second is a ventilation-perfusion irregularity, that is, the perfusion of hypoventilated alveoli. Attention is also given to the mechanisms controlling pulmonary shunting, namely collateral ventilation, pulmonary hypoxic vasoconstriction, and bronchoconstriction from hypocapnia. C.R.

**A82-21729** † **A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts (Sistemnyi analiz dvigatel'nykh reaktsii cheloveka v raznykh rezhimakh raboty tselenapravlennogo povedencheskogo akta).** O. Ia. Bokser (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR) and K. V. Sudakov (Ivanovskii Meditsinskii Institut, Ivanovo, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Jan.-Mar. 1981, p. 3-31. 125 refs. In Russian.

The way in which goal-directed activity in humans is ensured somatically and autonomically on the basis of a temporal organization of start and stop signals is investigated. Laws are established for the programming of the results of the working of the space-time continuum of stage results and effector components directed toward the attainment of a finite adaptive effect that is characteristic of each type of behavioral act investigated. C.R.

**A82-21730** † **The dynamics of forming a prediction system in goal-directed behavior (Dinamika formirovaniia apparata prognozirovaniia v tselenapravlennom povedenii).** G. N. Rychkova (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 12, Oct.-Dec. 1981, p. 99-111. 37 refs. In Russian.

A hypothesis describing a dynamic principle at work in the formation of a system for prediction is elaborated. The stage of generalization involves the setting up of an inexact and redundant reinforcement model in the acceptor for evaluating the results of actions; here, ineffective methods of attaining goals prevail. In the stage of concentration, a precise reinforcement model is set up, and there are effective means of attaining goals. The system for prediction evolves by means of a mechanism of orienting and exploratory reactions; these arise from discrepancies between the predicted and the actual. The evolution also depends on a system of positive and negative emotions that operates simultaneously. C.R.

**A82-21731** † **Study of the electrical activity of the extraocular muscles (Issledovanie elektricheskoi aktivnosti vneshnikh glaznykh myshts).** R. B. Nebieridze (Akademiia Nauk Gruzinskoi SSR, Institut Kibernetiki, Tiflis, Georgian SSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 12, Jan.-Mar. 1981, p. 119-132. 84 refs. In Russian.

The characteristics of the electrical activity associated with the extraocular muscles in tonus and during tracking and saccadic eye movements are discussed on the basis of experimental and literature data. Electromyographic studies of the motor units of the ocular muscles are considered, and morphological and physiological evidence for the existence of two types of motor units, tonic and phasic, in the extraocular muscles is reviewed. On the basis of this evidence, it is proposed that rather than there being units functioning either to maintain tonus or induce movements, there exists one type of motor unit functioning at rest and during the fast and slow phases of nystagmus, and a second type functioning only during the fast phase of nystagmus, primarily during large-amplitude saccades. The characteristics of motorneuron control of tracking and saccadic eye movements are also discussed. A.L.W.

Experiments are described showing that the blood, even though having a low level of erythrocytes, has a high content of hemoglobin. This is interpreted to mean that the low number of erythrocytes is balanced by a high degree of hemoglobin saturation. The concentration of leukocytes in the blood is found to be relatively high. C.R.

The blood pressure in the common pulmonary artery in humans is determined on the basis of measurements of the alveolar-arterial difference in oxygen pressures and the arterial-alveolar difference in carbon dioxide pressures. The study is carried out for a variety of gas compositions of mixed venous blood and at different levels of lung ventilation. A mathematical model for the operation of heterogeneous lungs is used. The model consists of three parts, describing blood flow, ventilation, and gas exchange in individual lobules; it also includes equations of the gas composition average of arterial blood and alveolar air. Z. Meerson, V. I. Pavlova, V. S. Iakushev, and S. P. Sinitsyn (Akademiia Meditsinskikh Nauk SSSR, Moscow; Cheliabinskii Pedagogicheskii Institut; Cheliabinskii Meditsinskii Institut, Chelyabinsk, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 91, Jan. 1981, p. 23, 24. 10 refs. In Russian.

The activation of the gamma-aminobutyric acid system's metabolism is thought to occur through a nonspecific mechanism which responds to a variety of extreme irritants. By limiting the stress syndrome, the mechanism prevents harmful effects. To test this hypothesis, the main parameters of the gamma-aminobutyric acid system are compared in four groups of animals. It is found that activation can be brought about by an extremely wide range of irritants. C.R.

**A82-21747** † **Noise and vibration effects on vestibular and visual functions in teenagers (Shumovibratsionnye vozdeistviia na vestibuliarno-zritel'nye funktsii u podrostkov).** Ts. Popivanova (Meditsinska Akademiia, Sofia, Bulgaria). *Gigiena i Sanitariia*, Sept. 1981, p. 58, 59. In Russian.

The purpose is to assess the effects of noise and vibration on the activity of the vestibular and visual analyzers of teenagers receiving training in the textile and machine-building industries. Special attention is given to the vestibular effect on the visual system when the vestibular analyzer is in a noninertial state. It is found that these teenagers are more susceptible, in terms of both frequency and severity, to impaired spatial perception. These disorders are found to be independent of the amount of attention paid to the task at hand. C.R.

In Russian.

The concept of the biological norm is discussed in relation to criteria of harmfulness in hygiene and toxicology. Ways of determining this norm are considered, and particular attention is given to the development of quantitative and qualitative criteria of the harmfulness of chemical (and other pollution-related) effects on the organism. B.J.

**A82-21751** † **The effects of successive ionizing radiation and heat on antibody formation (Posledovatel'noe deistvie ioniziruiushchei radiatsii i tepla na protsess antiteloobrazovaniia).** I. A. Gamzaeva, N. S. Gabai, R. F. Iagubov, and D. Kh. Aivazova (Ministerstvo Zdravookhraneniia Azerbaidzhanskoi SSR, Respublikanskii Nauchno-Issledovatel'skii Institut Virusologii, Mikrobiologii i Gigieny, Baku, Azerbaidzhan SSR). *Gigiena i Sanitariia*, Jan. 1981, p. 35, 36. 8 refs. In Russian.

The responses of antibody formation processes to prolonged successive exposures to low doses of ionizing radiation and hyperthermia are investigated. Rats were exposed to a constant Co-60 gamma-ray source at dose rates of 0.0000305 to 0.0000292 A/kg for 7 hours daily, temperatures of 40 C for 4 hours daily or radiation followed by heat for the course of 1 month, following which the numbers of antibody forming cells in the spleen were determined by the method of Ierne and Nordin (1963). Prolonged exposure to radiation is found to lead to an 18.3% reduction in the number of antibody-forming cells, while hyperthermia has little influence on antibody production in unirradiated animals. Successive exposure to both radiation and heat is observed to result in an even more pronounced suppression of antibody-forming cell production in the spleen. A.L.W.

**A82-21752** † **The effects of elevated environmental temperature combined with radiation on the organism (Deistvie povyshennoi temperatury okruzhaiushchei sredy v sochetanii s radiatsionnym faktorom na organizm).** M. M. Tsapkov. *Gigiena i Sanitariia*, Jan. 1981, p. 50-53. 24 refs. In Russian.

Literature data concerning the combined effects of ionizing radiation and elevated temperatures on the physiological functions of laboratory animals is reviewed. The data demonstrate effects of combined exposures on the cardiovascular system, impairments in the enzymatic activity of various tissues and the inactivation of chromosomal repair processes following radiation damage. The degree of radiation damage depends both on the radiation dose and the duration of the temperature factor, although elevated temperatures accelerate the elimination of radioactive substance from the body. A need for further experimental data for the evaluation of human working conditions and radiation safety is expressed. A.L.W.

Results of a study of 167 patients with ischemic heart disease are presented. It is found that, under conditions of urgent adaptation to physical stress, a process of latent decomposition occurs during the early preclinical stage of cardiac insufficiency. This stage is characterized by a reduction of the diastolic relaxation rate of the heart, a reduction of ejection fractions, stroke volume, and oxygen pulse, and an increase in terminal diastolic and systolic volume. A classification is presented which divides decussations of the human muscular system into three groups: (1) decussations of muscles situated in neighboring layers of the same topographic area; (2) decussations of muscle-synergists; and (3) decussations of fibers of one muscle as well as of tendons of one muscle. It is proposed that decussation in a particular muscle group always presupposes decussation in the antagonistic group. The conformity of decussations in antagonistic groups of muscles is morphological evidence of their functional unity. B.J.

Various histological and morphometric methods were used to study vascular and tissue structures in the lungs of 49 dogs whose movement was completely restricted for 1, 3, 7, 15, 30, 60, and 90 days. In nearly every period of the experiment, edema was found in the bronchial wall, perivsal and peribronchial tissue, and interalveolar septa. As the time of hypokinesia increases, the connective tissue becomes coarse and the collagenous fiber fasciculi become thicker along the vascular bed. All the components are subject to morphological alterations due to hypokinesia, which in turn affects the gas-exchange function. B.J.

Changes in the characteristics of lysosomes under conditions of stress are reviewed in relation to the role of lysosomes in stress adaptation. Experimental data demonstrating changes in lysosome enzyme activities, membrane permeability, numbers, sizes and cellular locations upon organism exposure to stress factors including cooling, physical exercise, hypoxia, ionizing radiation, hyperbaric oxygenation, nutritional insufficiencies and altitude hypoxia training is presented, and the hormonal regulation of lysosomal functions under stressful conditions is discussed. The role of the lysosome in adaptive responses to subextremal and extremal environmental factors is then considered in the areas of metabolic adjustment, the provision of cells with energy and material substrates, intracellular regeneration, proliferative processes and stromal-parenchymal interactions. A.L.W.

Experimental investigations of the last five years concerned with the mechanisms of cellular and humoral immunity are reviewed with particular emphasis on the local immunity of the mucous membranes. The origin, antigen induction and migration pathways of the cells synthesizing class A immunoglobulins (IgA) are examined. Mechanisms controlling the relative populations of the plasmacytes synthesizing IgA in the lymphoid formations associated with the mucous membranes and exocrine glands and the differentiation of cells producing IgA dimers are discussed. Attention is also given to results of studies of the integration of separate polypeptides, the physical and chemical properties of secretory molecules IgA, and mechanisms of IgA dimer transport through the granular epithelium. A.L.W.

**A82-21774** † **Mechanisms for the regulation of the intracellular calcium distribution (Mekhanizmy reguliatsii vnutrikletochnogo raspredeleniia kal'tsiia).** S. N. In Russian.

Mechanisms involved in the hormonal and ionic regulation of cellular calcium levels and calcium binding by the various cellular membranes are reviewed. Consideration is given to the regulation of the calcium intake through changes in the potential-dependent and potential-independent membrane channels and the channels controlling sodium intake, and of calcium outflow through Ca-Na exchange and Ca-ATPase which serve to maintain cellular calcium levels an order of magnitude lower than those of the extracellular fluid. Also examined are the kinetics of calcium bonding to the interior plasma membrance, mitochondria and the endoplasmic reticulum. A.L.W.

**A82-21775** † **The application of bicycle ergometry to the early detection of ischemic heart disease (O primenenii veloergometrii dlia rannego vyiavleniia ishemicheskoi bolezni serdtsa).** V. Ia. Grigorov, E. G. Tarasik, and L. V. Mel'nikova. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 56, 57. In Russian.

A clinical study on the application of exercise cardiography to the detection of latent ischemic heart disease in apparently healthy persons is presented. The study involved the measurement of three- and six-channel EKGs in 400 subjects undergoing submaximal bicycle ergometer exercise. Indicators of coronary insufficiency were found in 17.8% of persons considered to be practically healthy, 66.2% of persons considered to be at high risk for ischemic heart disease, 56.4% of persons with unusual resting EKGs characteristics of ischemia and 46.1% of persons with cardialgia. Results thus demonstrate the usefulness of exercise cardiography in clinical situations for the detection of latent ischemic heart disease in otherwise healthy persons or persons at high risk undergoing close medical surveillance. Experiments show that piracetam increases the resistance of animals to various types of hypoxia: hypoxic in mice and cats, circulatory in rats, and histotoxic in cats. But the drug does not exert protective action in cats, rats, and mice with hemic hypoxia induced by the injection of sodium nitrite. B.J.

U. Ostrovskaia, N. N. Kleimenova, and V. A. Arefolov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Farmakologiia i Toksikologiia*, vol. 44, Sept.-Oct. 1981, p. 534-539. 13 refs. In Russian.

Experiments on albino rats involving the administration of sodium hydroxybutyrate for a two-month period (100 and 1000 mg/kg daily) are described. It is found that such administration increased the work capacity and body weight of the rats and produced marked changes in the mitochondrial apparatus of cardiac myocytes and skeletal muscles. Prolonged administration of the drug resulted in an increased amount of mitochondria, polyploidy of cardiomyocyte nuclei (for a dose of 100 mg/kg) and marked hypertrophy (for a dose of 1000 mg/kg). It is suggested that this drug has a specific anabolic effect based on hormonal control and an effect on protein synthesis. B.J.

Experiments on cats, mice, and rats disclosed the adaptogenic effect of mebicar. The drug decreased emotional stress and removed the stupor-like state in cats induced by stress and pain stimulation. The drug slightly increased the life span of animals under hypoxic hypoxia and raised the limits of maximum tolerable physical load. It reduced the accumulation of hypoxic lactate, and produced an increase in glycogen content in muscle cells of the myocardium and skeletal muscles. B.J.

Experiments were performed on 120 male rats to study the rate of hypothermia development in different stages: mild, medium, and deep, corresponding to rectal temperatures of 33, 26, and 19 C. This rate decreased significantly in mild hypothermia induced by nicotine (4 mg/kg), in medium hypothermia induced by nicotine and pilocarpine (25 mg/kg), and methacine (20 mg/kg) combined with arecoline (20 mg/kg), and in deep hypothermia induced by methacine combined with arecoline. However, the rate of development was found to rise in deep hypothermia induced by methacine (20 mg/kg) combined with proserine (0.45 mg/kg). B.J.

Results are presented on 22 rabbits with bipolar electrodes implanted in the dorsal hippocampus and the midbrain reticular formation. It is shown that a submaximal physical load in nontrained animals results in a stable reduction in the excitability of the structures studied. In the course of a 30-day training program, the excitability of the hippocampus was reduced, while the excitability of the reticular formation underwent a short-term increase but then returned to the initial level on the 20th day of training. High-amplitude activity predominated in the EEG of the structures studied, while local blood flow increased only in the reticular formation. B.J.

In Russian.

The effect of prolonged light stimulation on different parts of the visual analyzer was investigated in cats. The adaptation process was found to be very complex as manifested in the diverse parallel processes in the hierarchic structure of the analyzer. Adaptive reorganization in the distal parts of the retina is directed towards the regulation of general sensitivity, while in the optic channel and lateral geniculate body this reorganization is directed towards the reduction of the dependence of cortical process on fluctuations of the illumination level. The predominance of inhibitory processes in the cortex characterizes the increasing complexity of cortical processes. It is also shown that the reorganization of electrical activity expresses not only a change of sensitivity but also adaptation to many parameters which characterize the transition from darkness to light. B.J.

**A82-21789** † **Types of spontaneous discharges in muscle receptors (Tipy spontannykh razriadov myshechnykh retseptorov).** V. I. Zalkind (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Neirofiziologiia,* vol. 13, no. 3, 1981, p. 315-321. 12 refs. In Russian.

Based on an analysis of spontaneous and induced discharges from the receptors of passive m. triceps muscle spindles in cats, three types of responses have been identified: (1) continuous pulse train with unimodal symmetric intervals between pulses; (2) bunched action potentials with bimodal interval distribution; and (3) sporadic pulses with long intervals between pulses. Comparison of the characteristics of spontaneous discharges and discharges induced by static muscle stretching indicates that both types of responses have the same mechanism. It is suggested that spontaneous activity may be viewed as a static response of receptors to internal factors related to interaction between extrafusal and intrafusal muscular fibers. V.L.

The use of oxygen as the indicator gas in the determination of pulmonary closing volumes in the single breath expiration test is investigated. Closing volumes, calculated as the volume of gas expired at the moment when sharp changes in indicator gas concentration signal the onset of phase IV of the single breath curve, were obtained in 10 subjects with normal spirographic data by both oxygraphic and nitrographic techniques. A high degree of correlation between the results of the techniques is found, indicating the oxygraphic method to be as useful as nitrography for the examination of the small respiratory ducts. In addition, the use of oxygen as a test gas facilitates the detection of the inflection point in the single breath curve, increasing test accuracy. A.L.W.

The characteristics of nonesterified fatty acid metabolism during exercise and physical training in humans are discussed. The mobilization of nonesterified fatty acids due to the action of sympathetic intermediaries during exercise is discussed, and the importance of the nonesterified fatty acids as an energy source is emphasized. Problems in the understanding of the mechanisms by which physical training increases the capability of the muscles to utilize nonesterified fatty acids are examined, and it is pointed out that the degree of fatty acid mobilization is determined by the intensity of the exercise relative to maximal oxygen uptake. Data on the variations in plasma fatty acid levels during work is reviewed, and the concepts of the plasma pool and its turnover rate are introduced as quantitative indicators of metabolic processes. Finally, attention is given to the factors determining the transport, oxidation rate and de nova synthesis of single fatty acids, carbon, and to changes in the quantitative and qualitative characteristics of nonesterified fatty acid metabolism upon the cessation of exercise. A clinical trial is presented on the application of stabilography to the detection and subsequent monitoring of vestibular impairments resulting from cranio-cerebral trauma in boxers. Oscillations of subject center of gravity while standing in the Romberg position in the frontal and sagittal planes were measured in 112 subjects over the course of six years, with 27 serving as controls and 89 boxers having undergone head trauma as the result of a knockout. Measurements made before and after injuries reveal the vestibular apparatuses of boxers having had previous equilibrium training to be more resistant to athletic trauma, indicative of a need for the development of a method for training the organs of equilibrium during the preparation of a boxer. Head traumas are also found to be occasionally accompanied by evident and persistent disorders in static coordination. The method of stabilography is thus recommended for use in the medical supervision of boxers. A.L.W.

The effects of athletic training for speed, endurance or strength on physiological responses to hypoxemia resulting from physical exercise under thermal stress are investigated, along with the role of these responses in establishing the elevated heat tolerance of athletes. Measurements of heart rate, blood oxygenation, oxygen uptake, and respiratory minute volume and rate were made during ergometer exercise at an ambient temperature of 50 C and relative humidity of 60% in sprinters, distance runners and weightlifters, and a control group of students. Ergothermic stress is found to produce a less marked decrease in blood oxygenation in the athletes than in the controls which is associated with a hyperfunction of the oxygen transport system in the weightlifters, and improvements in the mechanisms of oxygen utilization and transport in the runners. In the sprinters, improved heat tolerance is related to mechanisms counteracting the effects of ergothermic hypoxemia, while the distance runners are better able to tolerate the hypoxemia. A.L.W.

The effects of the physical, and emotional stresses encountered during competition on the immune status of athletes are investigated. Experiments involving a functional test (maximal exercise) and evaluation of the levels and activities of T and B lymphocytes were performed on healthy young athletes from different sports during competitive periods of various durations, at various stages of preparation and following the competitive seasons. Changes in immune processes, particularly the T system of immunity, were observed in all types of sports and in all times of the year. The suppression of the immune reaction found under the influence of the training stresses in the preparatory period is observed to be transient, and alternates with a recovery following rest. Changes in immunity are indicative of a general adaptive stress syndrome resulting in an exhaustion phase, which leads to an increased morbidity risk. Immunological monitoring may thus be used to predict individual likelinesses of becoming ill, and to develop training schedules minimizing health risks. A.L.W.

The mathematical modeling of immune responses to a viral intrusion is discussed. Following a review of the functions and major components of the immune system and its interactions with the processes occurring during the course of a disease infection, a mathematical model of infection and immune responses to it is presented which is formulated in terms of viral growth, the responses of plasma cells and antibody production, and damage to the target organs. Possible applications of the model in clinical practice and to the understanding of the nature of disease are then examined. A.L.W.

Cardiovascular and autonomic neuronal responses to acute emotional stress induced by the electrical stimulation of the hypothalamus and skin are investigated in immobilized chinchilla rabbits. Measurements of arterial pressure and heart rate were obtained as a function of time during the experiment, along with determinations of water-soluble protein content, neuronal cell body and nuclear volume and weight in neurons of the superior cervical ganglion, nodose ganglion, stellate ganglion and sympathetic chain. From the cardiovascular responses it was possible to identify three types of reactions: resistance, adaptation, and the development of stress effects. Various metabolic changes were observed in the extramural autonomic neurons of the stress-susceptible animals, the most marked being an enhancement of catabolism in the nodose ganglion. A tendency towards increased activity of the fast isoenzymes of lactate dehydrogenase is also observed in the conductive system of the heart. A.L.W.

The effects of night work on psychophysiological reactions are investigated together with the usefulness of several neurophysiological methods in assessing functional condition following night work and sleep. Responses to auditory and visual stimuli, electrocardiograms, electrooculograms, electroencephalograms, as well as evoked potentials and contingent negative variation were observed in nurses immediately following work on the night shift or a night's sleep preceding work on the evening shift. The neurophysiological tests as well as the more routine techniques reveal a reduction in the general activity level in nurses following the night shift, which is particularly evident as a reduction in attention. Results suggest the potential applications of the techniques employed in the establishment of optimal work-rest cycles. A.L.W.

**A82-21983** † **Mathematical model of a human operator detecting a signal on a noise background (Matematicheskaia model' cheloveka-operatora, obnaruzhivaiushchego signal na fone shuma).** N. M. Novikova. *Radioelektronika,* vol. 25, Jan. 1982, p. 91-93. In Russian.

In the problem considered, the human operator must detect a signal with an unknown arrival time on a background of Gaussian noise. It is shown that the functioning of the operator can be described by a nonparametric sign detector model. The probability of correct detection is examined as a function of signal-to-noise ratio, and the effectiveness of the model is confirmed by experimental results. B.J.

**A82-21926** **An asymmetrical model of the airways of the dog lung.** K. Horsfield, W. Kemp, and S. Phillips (Midhurst Medical Research Institute, Midhurst, Sussex, England). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Jan. 1982, p. 21-26. 16 refs.

An asymmetrical model is developed for the branching of the brachial tree in dog lung. The model is based on measurements made on a resin cast of the bronchial tree of a 25-kg dog, for which dimensions and branching relationships were obtained in branches down to 0.5-mm diameter. The branches were ordered, the number in each order was counted, and the mean diameter and length in an order was calculated. The model was then constructed according to delta, the difference in order between the two daughter branches at a bifurcation, with delta taken as identical for all parent branches of a given order. The model is thus especially useful for computer analysis of such variables as input impedance. A.L.W.

**A82-21928** * **Phase V of the single-breath washout test.** G. M. Nichol, D. B. Michels, and H. J. B. Guy (Christchurch Clinical School of Medicine, Christchurch, New Zealand; California, University, La Jolla, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Jan. 1982, p. 34-43. 34 refs. Research supported by the Medical Research Council of New Zealand and North Canterbury Hospital; Grant No. NsG-9075.

A downward-deflecting phase V is often seen following the terminal rise (phase IV) in single-breath washout tests. To investigate the nature of phase V, experiments using simultaneous washouts of N2 and tracer boluses of Ar were performed on eight normal nonsmoking subjects aged 27-41 who exhibited a phase V. Phase V is found to occur in all subjects at expiratory flow rates between 0.1 and 2.0 l/sec shortly after expiration became flow limited. Volumes of both phases IV and V increase with increasing flow rate. The difference between the exhaled volumes at which flow became limited and phase V appeared is shown to be approximately equal to the anatomic dead space. Results support a model of lung emptying in a gravitational field in which flow limitation occurs first in the lower lung regions and then progresses toward the upper regions, causing phase IV. A decrease in the amount of flow from the upper relative to the lower regions after all regions have become flow limited then causes phase V. A.L.W.

**A82-21929** **A computational model for expiratory flow.** R. K. Lambert, T. A. Wilson, R. E. Hyatt, and J. R. Rodarte (Minnesota, University, Minneapolis; Mayo Clinic and Mayo Foundation, Rochester, MN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 44-58. 18 refs. Grant No. NIH-HL-21584.

A mathematical model of maximal expiratory flow was developed. Coupled equations describing the pressure losses in the flow and the pressure-area behavior of the airway were integrated along the airway from the periphery to the flow-limiting site. Equations describing pressure losses in the flow were adapted from studies of bronchial casts. The bronchial anatomy utilized was that described by Weibel. Bronchial mechanical properties were obtained from measurements in excised human lungs for the central airways and by extrapolations of these data for the peripheral airways. The maximal flow for air and helium predicted by the model agrees with that of five lungs from which mechanical properties were obtained. The model predictions agree with published values of density and viscosity dependence of maximal flow. At high and midlung volumes, maximal flow is determined primarily by the wave-speed mechanism. At low lung volumes, maximal flow is primarily determined by the coupling of viscous pressure losses and airway mechanical properties. (Author)

The influence of lung surfactants on the passage of venous gas emboli through the pulmonary circulation into arterial blood during recompression treatment is investigated. Relationships between apparent surface tension and surface area were determined with a Wilhelmy balance for the first compression of films of the pulmonary surfactants dipalmitoyl lecithin (DPL), dipalmitoyl phosphatidylethenolamine (DPPE) and sphyngomyelin under simulated physiological conditions. Results show that DPL reduces apparent surface tension appreciably more than DPPE or sphygomyelin at the same surface concentration, producing tensions below 8 dyn/cm, the highest level at which normal pulmonary systeolic pressure could force trapped air into systemic arterial blood. Additional experiments in which compression was stopped for 1-min intervals as soon as surface tension fell below 15 dyn/cm demonstrate the possibility of reaching compression levels of up to 30% without accompanying excessively low surface tension. Results support the rule of stopping compression in cases of limb bends at 60 fsw, and suggests the advisability of stopping at the depth of relief. A.L.W.

**A82-21932** **Erythrocyte indices during a competitive marathon.** M. A. Kolka, L. A. Stephenson, and J. E. Wilkerson (Indiana University, Bloomington, IN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 168-172. 32 refs.

Changes in erythrocyte count, plasma osmolality and erythrocyte indicators occurring within the course of long-duration exercise are investigated. Measurements of the hematocrit, whole blood hemoglobin concentration and erythrocyte counts were made in blood drawn from three healthy adult males immediately prior to and at 4.8-km intervals during a competitive marathon (42.2 km). Despite running times of 3, 4 and 5 hr, the erythrocyte count is found to decrease linearly for the first 15 km of the race in all subjects, reaching a level 4.7% below the prerace control, then to rise back to control levels by 19.3 km, where it remained for the remainder of the race. Calculated values of the mean corpuscular hemoglobin concentration, mean corpuscular hemoglobin, and total red blood cell volume did not change significantly during the race, while plasma osmolality increased linearly and mean corpuscular volume displayed a negative linear correlation with osmolality. Data demonstrate the value of obtaining sequential blood samples during an exercise bout, as well as the ability of the organism to maintain erythrocyte indices within narrow limits. A.L.W.

**A82-21933** **Summated circulatory responses of thermal and baroreflexes in humans.** T. J. Ebert, D. F. Stowe, J. A. Barney, J. H. Kalbfleisch, and J. J. Smith (U.S. Veterans Administration Medical Center, Wood; Wisconsin Medical College, Milwaukee, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 184-189. 35 refs.

Interactions between thermal and baroreceptor inputs in the elicitation of cardiovascular reflexes are investigated in a study of the integration of multiple afferent information by the vasomotor centers. Noninvasive techniques were used to monitor variations in blood flow parameters induced by changes in central blood volume created by lower body negative pressure and leg elevation in the presence or absence of local thermal receptor stimulation by hand immersion in 10 C water. LBNP at -10, -25, and -40 Torr and leg elevation are found to result in changes in forearm vascular resistance, while the two high levels of LBNP are accompanied by decreases in stroke volume, caridac index and blood pressure and increases in heart rate and total peripheral resistance. Total peripheral resistance, forearm vascular resistance and blood pressure are also observed to increase during hand immersion. Combined stimuli induced simple additive responses in all variables except heart rate, where a central interaction between thermal and baroreflex control of heart rate is indicated. A.L.W.

French (California, University, Riverside, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 216-220. 23 refs. Research supported by the University of California; NSF Grant No. DEB-80-03513.

**A82-21935** **Pulmonary gas exchange during altered density gas breathing.** S. K. Christopherson and M. P. Hlastala (Washington, University, Seattle, WA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 221-225. 21 refs. Grants No. NIH-HL-12174; No. NIH-HL-08081-02.

The role of changes in the alveolar ventilation/perfusion distribution in determining the improvement in alveolar-arterial gas exchange observed during breathing of carrier gases with increased density is investigated. The alveolar ventilation/perfusion distribution was measured directly by the multiple inert gas elimination technique and compared to changes in the alveolar-arterial O2 partial pressure difference in dogs ventilated with room air alone or with a 20.9% O2 in He mixture. While no difference between air and heliox is observed in the overall cardiorespiratory parameters, oxygen exchange is observed to worsen with heliox breathing, as the alveolar ventilation/perfusion distribution improved slightly. It is thus concluded that the improvement in oxygen exchange cannot be explained by an improvement in ventilation/perfusion distribution; an alternative mechanism involving the interaction of diffusion and convection on inspiration is suggested. A.L.W.

**A82-21936** **Cardiac output increase and gas exchange at start of exercise.** M. L. Weissman, P. W. Jones, A. Oren, N. Lamarra, B. J. Whipp, and K. Wasserman (California, University, Torrance, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Jan. 1982, p. 236-244. 17 refs. Grants No. NIH-HL-07388; No. NIH-HL-11907.

The dynamics of the increase in alveolar gas exchange induced by increasing cardiac output pursuant to the onset of exercise is investigated. Temporal patterns of gas exchange were measured during the first 10-20 sec of cycle ergometer exercise with minute ventilation constant at the resting level and during a single prolonged constant airflow exhalation. A rapid response of increased gas exchange following the beginning of exercise is evidenced by a progressive elevation in alveolar CO2 tension and fall in O2 tension in the controlled ventilation experiment, and by a steepening of the slope of the alveolar phase of O2 and CO2 in the prolonged exhalation experiment. These changes, which would occur during the first one to two breaths of exercise in free-breathing subjects, are attributable to a reduction in overall pulmonary ventilation/perfusion ratio as cardiac output rapidly increased. A.L.W.

**A82-21937** **Possible impact of cosmochemistry on terrestrial biology - Historical introduction.** N. W. Pirie (Rothamsted

Experimental Station, Harpenden, Herts., England). *(Royal Society, Discussion on Molecules in Interstellar Space, London, England, May 20, 21, 1981.) Royal Society (London), Philosophical Transactions, Series A*, vol. 303, no. 1480, Dec. 24, 1981, p. 589-594. 29 refs.

Attention is given to opinions held by prominent men regarding the existence of life on celestial bodies other than earth, taking into account philosophers in ancient Greece, and scientists and non-scientist intellectuals in Europe. It is found that pluralism was the dominant outlook during the last few centuries. The separation of a belief in life elsewhere from a belief in intelligence elsewhere had to await the resolution of the spontaneous generation controversy. Extraterrestrial intrusion had been postulated to explain specific biological phenomena. The general proposition that all life came here from elsewhere seems to have originated with Richter (1865). The concepts of an introduction of 'seeds' from space to earth is considered along with the impact which components of meteorites and cosmic dust may have on biology. G.R.

**A82-21988** **Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems.** J. Brooks (British National Oil Corp., Exploration Div., Glasgow, Scotland). *(Royal Society, Discussion on Molecules in Interstellar Space, London, England, May 20, 21, 1981.) Royal Society (London), Philosophical Transactions, Series A*, vol. 303, no. 1480, Dec. 24, 1981, p. 595-606; Discussion, p. 608, 609. 77 refs.

Modern hypotheses about the origin of life on earth follow suggestions made originally by Oparin (1924) and Haldane (1929) about a chemical synthesis in which precursors of biomolecules could be formed from a primitive early atmosphere. The current knowledge of the abiogenesis of organic molecules is derived from the identification of organic molecules in astronomical spectra, the presence of organic compounds in carbonaceous chondrites, studies of the organic contents in early Precambrian rocks, and laboratory experiments. The considered investigation is concerned with an evaluation of the available information against the Oparin-Haldane hypothesis, taking into account the ancient geological record and information contained in carbonaceous chondrites. G.R.

**A82-21989** **Problems in the rate of evolution in biological systems.** F. R. Whatley (Oxford University, Oxford, England). *(Royal Society, Discussion on Molecules in Interstellar Space, London, England, May 20, 21, 1981.) Royal Society (London), Philosophical Transactions, Series A*, vol. 303, no. 1480, Dec. 24, 1981, p. 611-622; Discussion, p. 622, 623. 18 refs.

Questions regarding the earliest organization of systems leading to the evolution of life are considered, taking into account the amino acids of the prebiotic soup, and the adenine molecule as a component of the energy carrier ATP. Aspects of the biochemical evolution are examined, giving attention to living systems based on proteins or nucleic acids, living systems based on nucleic acids, and living systems based on nucleic acids and proteins. The origin of enzymatic systems is discussed. It is pointed out that a modern example of the self-assembly of a catalytic protein from its constituent parts can be seen in the enzyme ferredoxin. The greatest single discontinuity in the evolution of living systems is thought to be the attainment of the eukaryotic state of organization. According to the theory of serial endosymbiosis, the characteristic eukaryotic organelles are derived from unicellular symbionts. Attention is also given to the origin of chloroplasts. G.R.

**A82-22078** * # **A program for assessing pilot mental state in flight simulators.** A. T. Pope and R. L. Bowles (NASA, Langley Research Center, Hampton, VA). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 20th, Orlando, FL, Jan. 11-14, 1982, Paper 82-0257.* 16 p. 17 refs.

A program to apply proposed measures of pilot mental state in the simulator flight deck environment has been undertaken at NASA Langley Research Center. Literature survey identified a promising subset of methods for assessing workload, attention and vigilance, and task-related stress, and revealed a need for improved analytical techniques in the physiological area. An effort to apply functional modelling techniques has been initiated. A psychophysiological laboratory has been designed for simulator application. The program is designed to develop improved techniques for evaluating simulator cue fidelity and for imposing realistic workload and attentional demands on the simulator pilot. (Author)

**A82-22206** # **The thermal response of a human in the near-zone of a resonant thin-wire antenna.** R. J. Spiegel (U.S. Environmental Protection Agency, Health Effects Research Laboratory, Research Triangle Park, NC). *IEEE Transactions on Microwave Theory and Techniques*, vol. MTT-30, Feb. 1982, p. 177-185. 14 refs.

The thermal response of a human in the near-zone of a resonant thin-wire antenna has been determined using a model consisting of a series of transient conduction equations with internal heat generation due to metabolism, internal convective heat transfer due to blood flow, external reaction by convection and radiation, and cooling of the skin by sweating and evaporation. Numerical results are presented for two cases: a human in the near-zone of a quarter-wave monopole and a half-wave dipole operating at 45 and 200 MHz, respectively. It is found that thermal effect is negligible for antennas with input power levels of less than 50 W. V.L.

**A82-22248** * **Enzymatic capacities of skeletal muscle - Effects of different types of training.** F. W. Booth (Texas, University, Houston, TX) and G. R. Hugman (Baylor College of Medicine, Houston, TX). *Medicine and Sport*, vol. 13, 1981, p. 153-164. 39 refs. Research supported by the Muscular Dystrophy Association of America; Grant No. PHS-AM-19393; Contract No. NAS9-15388.

Long-term adaptation mechanisms to maintain homeostasis at increased levels of exertion such as those caused by regular exercise are described. Mitochondrial changes have been found to be a result of endurance exercises, while mitochondrial responses to other types of exercise are small. Further discussion is devoted to long-term changes in glucose transport, hexokinase, phosphofructokinase, pyruvate kinase, and the increased sensitivity of an endurance trained muscle to insulin. Less lactate has been found to be produced by the skeletal muscles at the same work rate after adaptation to endurance exercise training, and the capacity for the flux of the two-carbon acetyl chain through the citric acid cycle increases in skeletal muscles in response to endurance training. Finally, endurance training is noted to result in glycogen sparing and an increase in the capacity to utilize fatty acids. M.S.K.

**A82-22249** * **In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids.** M. D. Ross, K. G. Pote, P. L. Cloke, and C. Corson (Michigan, University, Ann Arbor, MI). *Physiologist*, vol. 23, Dec. 1980, p. S-129, S-130. 10 refs. Grant No. NsG-9047.

Recently, data have been accumulating to indicate that saccular and utricular otoconial complexes of the gravity receptor organs are dynamic and interact constantly with their environment. This study investigates the possibility that the ionic composition of the surrounding fluid influences calcium ion binding and release, and explores the importance of the K(+)/Na(+) ratio. Two in-vitro methods were developed, the first of which employed artificial endolymph and perilymph while ionically balanced fluids in which only the K(+)/Na(+) was altered were used in the second. The ability of rat complexes to take up Ca-45(++) during incubation with these fluids was assessed using liquid scintillation spectrometry. In vitro uptake of Ca-45(++) was greater in fluids with a high K(+)/Na(+) ratio than in fluids in which the ratio was low. The ability of the complexes to take up Ca-45(++) appeared to decline with age. (Author)

**POSSIBLE MECHANISM FOR CHEMICAL INDUCTION OF CHROMOSOME ABERRATIONS IN MALE MEIOTIC AND POSTMEIOTIC GERM CELLS OF MICE**
Walderico M. Generoso 1981 16 p refs Presented at 4th Intern. Symp. of the Radiation Biol. Center, Kyoto, 28 Sep. 1981 Sponsored in part by EPA
(DE81-031998; CONF-810966-1) Avail: NTIS HC A02/MF A01

The mechanism by which chemically induced lesions in the chromosomes of mammalian germ cells are actually converted to aberrations and transmitted to progeny are investigated. An attempt is made to explain how dominant-lethal mutations and heritable translocations are produced from chemical treatment of meiotic and postmeiotic germ cells of male mice. DOE

**VARIATION IN PLANT RESPONSE TO OZONE: A CONCEPTUAL MODEL OF PHYSIOLOGICAL EVENTS**
D. T. Tingey and G. E. Taylor, Jr. 1980 47 p refs Presented at 32nd Symp. on Effects of Gaseous Air Pollution in Agr. and Hort., Nottingham, England, 1 Sep. 1980 Prepared in cooperation with Oak Ridge National Lab.
(Contract W-7405-eng-26)
(DE81-029692; CONF-8009172-1) Avail: NTIS HC A03/MF A01

The environment and genotype exert profound influences on a plant's ozone response. Based on the multiplicity of physiological mechanisms responsible for variable response, a common progression of events is proposed: ozone conductance (gas and liquid phase), perturbation, homeostasis, and injury. Injury is the repercussion of the preceeding events. Gas and liquid phase conductances are significant sources of variable ozone response. Genic expression and environmental stimuli affect ozone conductance and homeostasis and thereby the extent of injury. Based on conceptual model, gas phase conductance would be the decisive factor controlling injury only if it were the rate limiting step. Any physiologically significant intervening event between gas-phase conductance and injury would reduce the association between them. Either liquid phase conductance of homeostasis could reduce that association. DOE

**MICROBIOLOGICALLY-MEDIATED MUTAGENIC ACTIVITY OF CRUDE OIL Final Report, 1976 - 1979**
Bruce A. Cummings and Ronald C. Gordon Sep. 1981 302 p refs
(Grant EPA-R-805041)
(PB82-105131; EPA-600/3-81-053) Avail: NTIS HC A14/MF A01 CSCL 06T

Crude oil was incubated with raw and sterile river water samples and assayed for mutagenic activity for the Ames test to determine the ability of naturally occurring freshwater microorganisms to form mutagenic biodegradation products from crude oil. River water samples supplements with inorganic salts were incubated with one percent crude oil in Erlenmeyer flasks for 1-6 weeks and 4 and 20 C with shaking. Replicate flasks were extracted at various time intervals with 1,1-2 trichloro-1,2,2-trifluoroethane, the solvent evaporated and the residues taken up in dimethyl sulfoxide for mutagenicity testing. The extracts were assayed for mutagenic activity by the plate incorporation method of the Ames test with Salmonella tester strains TA 100, TA 1535, TA 1537, TA 1538 and TA 98. Mammalian liver microsomes were not used in the mutagenicity test system as the oil degrading microorganisms constituted the enzyme activation system in the study. GRA

**MECHANISMS OF CADMIUM ABSORPTION IN RATS**
Ernest C. Foulkes, D. R. Johnson, Naoki Sugawara, Roland F. Bonewitz, and Cathleen Voner Sep. 1981 59 p refs
(Grant EPA-R-805840)
(PB82-108184; EPA-600/1-81-063) Avail: NTIS HC A04/MF A01 CSCL 06T

The study was undertaken in order to help clarify the factors which determine the fractional absorption of an oral load of cadmium (Cd) from the intestine of the rat. The experiments utilized intact segments of intestine, perfused or incubated in situ, with their blood supply intact. Absorption of Cd from the jejunal lumen can be ascribed to a saturable membrane system, that is after short periods of exposure essentially all the metal removed from the lumen was recovered in mucosal issue (Step 1). The second step in Cd absorption, i.e., transfer of the metal from mucosa into blood, proceeded at only 1-2% of the rate of uptake from the lumen (Step 1). No evidence was obtained for a role of metal lothionein in the mucosal retention of Cd. Step 1 of Cd absorption was inhibited by a variety of exogenous and endogenous factors. Thus, zinc was found to depress Cd transport in an apparently competitive manner. Addition of milk to the lumen also inhibited Cd uptake, an effect entirely due to the Ca content. Bile salts act as endogenous modulators of Cd absorption; their effect may be related to micelle formation. The research also included studies of duodenal and ileal Cd transport. GRA

**SYSTEMIC AND CEREBRAL HEMODYNAMICS IN FLIGHT PERSONNEL EXPOSED TO MODERATE HYPOXIA**

V. N. Denisov, S. F. Rayev, and I. I. Antufyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 19-23 Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 16-19

Avail: NTIS HC A08/MF A01

For the purposes of medical expertise the state of systemic and cerebral hemodynamics was investigated in 66 pilots with autonomic-vascular instability and in 38 healthy subjects exposed to moderate hypoxia (in an altitude chamber). The pilots showed noticeable tachycardia or systolic hypertension, as well as certain changes in cardiac output and stroke volume. These alterations were accompanied by rheoencephalographic changes of two types one of which can be regarded as an adverse response of cerebral circulation to hypoxia. It is concluded that the study of systemic and cerebral circulation in hypoxia yields important diagnostic information that allows better estimates. M.G.

**CAUSES OF FATIGUE AMONG CREWS OF CIVIL AVIATION HELICOPTERS**

Yu. N. Kamenskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 24-27 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 19-22

Avail: NTIS HC A08/MF A01

The role of vibration and noise in the development of fatigue in helicopter crews was assessed. The exposure to these factors during the flying shift results in an early and marked fatigue of pilots the level of which depends on the vibration effects to a larger extent than on the noise effects. The fatigue is followed by a decline of the psychophysiological parameters characterizing the visual and motor functions as well as the ratio of the basic processes in the central nervous system. M.G.

**PHYSIOLOGICAL AND HYGIENIC EVALUATION OF VIBRATION IN THE COCKPIT OF A CARGO HELICOPTER**

Yu. G. Matveyev and Yu. N. Kamenskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 28-32 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 22-25

Avail: NTIS HC A08/MF A01

The correlations between statistical parameters of vibration in the work place, work schedules, and functional state of subjects when performing commercial flights were studied. In the cockpit of five helicopters the floor and the chair vibrated in a band of 8 Hz at a frequency of 112.5 and 114.0 dB, respectively. Before and after the flying shift 66 crewmembers were interviewed and examined. Vibration was referred to as the most unpleasant factor by 30.4% of them, noise was defined as the most unpleasant factor by 6.5% of them; 63.1% described both factors as similarly adverse. The level of psychophysiological changes was proportional to the flight time. The first signs of fatigue were seen after flights of up to 5 hours in duration, to increase drastically after flights of 6 and 7 hours. M.G.

**EVALUATION OF MAN'S ENDURANCE OF LOCAL PRESSURE TO THE HEAD AND OBJECTIVE ASSESSMENT OF HYGIENIC SPECIFICATIONS FOR PROTECTIVE HELMETS**

V. M. Sinigin, Yu. G. Konakhevich, L. N. Sholpo, and A. I. Uglanov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 33-37 Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 25-28

Avail: NTIS HC A08/MF A01

To obtain reference data for a statistically substantiated evaluation of man's tolerance to the local pressure on the head (as applied to protective helmets kept on for a long time), 86 experiments were carried out in which 11 test subjects participated. The local pressure of 0.05 to 0.5 kg/sq cm was applied to eight areas of the head. The tolerance time was measured as the time interval from the beginning of the exposure to the emergence of localized sensations of the type: unpleasant, painful, very painful, or intolerable. As a result, statistically significant relationships between the tolerance time and the level of the local pressure were obtained for the eight locations and four grades of subjective sensations. These data can be used in evaluating protective helmets to be worn for a long time as well as in developing hygienic requirements for the advanced helmet-like devices. Author

**EFFECT OF TRANSMERIDIONAL FLIGHTS ON BIORHYTHM OF ZONE FORMATION BY STREPTOMYCES LEVORIS**

A. P. Savelyev, A. Kh. Akhmadiyeva, and I. G. Akoyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 38-41 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 28-31

Avail: NTIS HC A08/MF A01

The transmeridional transportation of the temperature controlled colonies of Streptomyces levoris exerted a marked effect on its biorhythms. This included changes in the growth and zone formation rates and differences in the vector of changes as related to the flight direction. The vector of changes during an east-oriented airborne flight coincided with that in orbital flight with a similar direction of transportation. These findings as well as the results of studies of seasonal and diurnal rhythms of the actinomycete zone formation suggest the synchronizing effect of the periodicity of geophysical factors. M.G.

**SIMULATION OF SOME OF MAN'S MOVEMENTS IN DIFFERENT GRAVITY FIELDS**

A. V. Zinkovskiy, I. A. Trofimova, and V. A. Chistyakov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 42-45 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 31-33

Avail: NTIS HC A08/MF A01

The control of man's movements during adaptation to an altered gravity field was modeled by mathematical methods. Two types of movements were investigated: forearm displacement with various loads and repulsions from a support in zero-G and at high G's. It was shown that movement coordination in altered gravity fields can be maintained due to a rearrangement of the control over muscle contraction which includes changes in the amplitude and pattern of joint moments in harmony with the gravity changes. M.G.

**MYOCARDIA MYOFIBRILS AFTER EXPOSURE TO WEIGHTLESSNESS AND ACCELERATIONS**
S. S. Oganesyan and M. A. Eloyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 54-59 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 38-42

Avail: NTIS HC A08/MF A01
The rats flown onboard Cosmos-605 and exposed to a synchronous experiment for 22 days showed an increased activity of myofibrillar cathepsins in skeletal muscles of different groups. In the flight rats the increase was greater than in the synchronous ground-based animals. This suggests a significant effect of weightlessness on the cathepsic activity. The parameter was partially normalized at R+ 25 or 26 days. The exposure of rats to accelerations of 4 and 5 G for 2 min daily during 2 weeks also increased the cathepsic activity of skeletal and myocardial myofibers. The parameter returned to normal a month after completion of acceleration exposures. Thus, changes in the proteolytic activity of myofibers of different muscles induced by weightlessness and acceleration are reversible. The significance of changes in the muscle tension as related to the mechanism of stimulation of proteolytic reactions is discussed. M.G.

G. I. Meleshko, L. M. Krasotchenko, and Ye. K. Lebedeva *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 84-90 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 58-62

Avail: NTIS HC A08/MF A01
Systems of biological air regeneration using photosynthesis of unicellular algae are examined. An oxygen-carbon dioxide mismatch associated with the difference in gas exchange coefficients of man and algae is shown. The value and vector of the mismatch depend on the degree of the above difference. In the system balanced with respect to oxygen consumption and carbon dioxide production, the rate of the mismatch equals to 1 per cent of either process per each unit of the difference of the gas exchange coefficients in the second decimal point. Methods for regulating the algal assimilation coefficient based on the use of various nitrogen forms for algal nutrition and controlled biosynthesis are discussed. Optimal variants of gas exchange balance in the semi-closed biological life support systems are described. B.W.

**LIPID SPECTRUM OF THE MYOCARDIUM OF WHITE RATS EXPOSED TO HYPOXIC HYPOXIA**

S. A. Sergeyev and G. A. Gribanov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 104-108 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 71-74

Avail: NTIS HC A08/MF A01

By a modified microthin-layer chrometography the total lipid spectrum of the cardiac muscle of white rats exposed to acute oxygen deficiency in an altitude chamber was investigated. It was found that the content of total lipids, phospholipids, free cholesterol, free fatty acids and triglycerides decreased during acute hypoxia. The exposure induced changes in the amount of glycerophosphatids, phosphatid acids and polyglycerophosphatids whose content diminished significantly. The concentration of phosphatidyl serines and phosphatidyl ethanol amines lowered to a lesser extent while that of sphyngomyelins increased. Acute oxygen deficiency accelerates the release of inorganic phosphate from the heart, thus, together with other factors, leading to disorders in the heart energetics. These findings indicate an important role of hypoxic hypoxia in the disturbances of lipid metabolism of the myocardium. This needs to be taken into consideration in the diagnostics and treatment of such states. Author

L. D. Klimovskaya and A. F. Maslova *In its* USSR Rept.: Space Biol. and Aerospace Med. Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 109-112 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 74-76

Avail: NTIS HC A08/MF A01

An exposure of rabbits to a constant magnetic field of 0.4 T for one hour caused increases in the blood content of adrenaline, noradrenaline, and acetylcholine, and in the adrenal content of adrenaline. Stimulation of the midbrain reticular formation led to a significant increase of the blood concentration of catecholamines and acetylcholine. After an exposure to the constant magnetic field the stimulatory effects of the reticular formation on the adrenergic systems diminished and on the cholinergic systems remained elevated. R.J.F.

**CLINICAL DISTINCTIONS OF RADIATION SICKNESS WITH EXPOSURE OF DIFFERENT PARTS OF THE HUMAN BODY TO RADIATION**

G. F. Nevskaya, G. M. Abramova, M. A. Volkova, Ye. V. Kavlycheva, A. S. Skorik, and V. V. Yurogov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 113-118 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 77-80

Avail: NTIS HC A08/MF A01

The clinical picture of radiation sickness of 139 radiological patients exposed to local irradition of the head, chest, and stomach with efficient doses of 210 rad was examined. It was found that at fractionated local irraditions the clinical symptom-complex of radiation sickness was identifical to that seen as a result of total-body irradiation. During head irradiation the major symptom was headache and during stomach irradiation nausea. The severity level of radiation damage measured with respect to the clinical symptom-complex as a whole with the aid of the bioinformation model was similar during irradiations of the head and stomach, much higher during irradiation of the chest. During head and stomach irradiations the severity level of radiation damage was proportional to the efficient dose. During chest irradiation there was no correlation between the severity level and the exposure to doses of 210 rad. Author

**METHOD OF RECORDING ROTATORY EYE REFLEXES**

M. M. Levashov and A. V. Dmitriyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 119-122 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec 1981 p 80-82

Avail: NTIS HC A08/MF A01

A method of recording rotatory eye reflexes in real time using polarized light is described. When a beam of light going to the photodetector is passed successively through two polarizers, illumination of the detector will depend on reciprocal orientation of polarization planes. Reciprocal rotation of polarization planes alters illumination proportionally to the cosine of angle of rotation. When the planes are parallel (0 degree angle), illumination is at a maximum, and when one of the planes is rotated 90 degrees in relation to the other, it is minimal. A miniature photoresistor is used as a detector, and it is covered with polarizing layer. The detector is placed on the anesthetized eyeball with suction cups. The light source and miniaturized amplifier unit were assembled on a mask worn over the subject's head. R.J.F.

V. I. Zborovskaya and E. A. Skiba *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 123-124 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 82-83

Avail: NTIS HC A06/MF A01

Use of a method of recording H reflexes that makes it possible to test the level of reflex activity of spinal motoneurons at rest and during movement, as well as to make qualitative and quantitative evaluations of various supraspinal and afferent factors is discussed. An electrode unit for electrostimulation of peripheral nerves or muscles was made. It has 6 electrodes 8-10 mm in diameter, which are mounted on an elastic dielectric plate. Rounded corners of the plate protect the skin from trauma when the electrode unit is secured firmly. The electrode unit is secured firmly to the region of the popliteal fossa, connected to the electrosimulator through a selector which connects the unit electrodes one after the other. The stimulation point is determined from the nature and magnitude of responses elicited in the muscle innervated by the stimulated nerve. R.J.F.

**COMPARATIVE ANTIHYPOXIC EFFICACY OF PRESSURE CHAMBER CONDITIONING AND FASTING OF MAN**
A. Yu. Katkov, Ye. A. Kovalenko, R. N. Chabdarova, G. A. Davydov, S. A. Vtoryy, and N. M. Utkina *In its* USSR Rept: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec. 1981 (JPRS-79849) 12 Jan. 1982 p 125-128 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 84-86

Avail: NTIS HC A06/MF A01

Two theoretically possible means of enhancing men's resistance to rapidly increasing hypoxia, pressure chamber conditioning and fasting, are studied. Eleven essentially healthy men were divided into two groups. The first group of subjects was submitted to 10-day pulsed pressure chamber conditioning. The second group of subjects spent 14 days on a total fast, without limiting water intake. Endurance of hypoxia in the first group was determined before pressure chamber conditioning and immediately after it, and in the second group before the fast and on the 14th day of food deprivation. The subject was raised continuously in the chamber at the rate of 20 m/s at rest, to maximum tolerance of altitude. The subject was raised again at the same speed 30 minutes after descending to 'Earth', but with concurrent performance of exercise on a bicycle ergometer constituting 200 kg-m/minutes. In both cases, the subject had to report the current 'altitude when so instructed. In the course of the test, a continuous recording of oxygen tension in the skin of the left forearm was made by the polarographic method. At normal barometric pressure, body weight, gas exchange, morphological and gas composition, and acid-base equilibrium of capillary blood was determined. R.J.F.

**CONDITION OF MENINGEAL NERVOUS SYSTEM DURING REPEATED EXPOSURE TO TRANSVERSE ACCELERATIONS**
G. A. Konstantinovskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 6, Nov. - Dec 1981 (JPRS-79849) 12 Jan. 1982 p 129-132 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 6, Nov. - Dec. 1981 p 86-88

Avail: NTIS HC A06/MF A01

The nerve elements of the dura and pia mater of the brain of 19 puberal cats weighing 2 to 3 kg were examined following repeated exposure to transverse accelerations (chest-back) for 20 minutes at 24-hour intervals, for 6 days. A force of 8 units with a gradient of acceleration build-up and decline of 0.5 to 0.4 unit/s was generated on a centrifuge with a 5 m arm, equipped with specially molded containers, in which the animals were immobilized in their physiological position. The cats were sacrificed using ether fumes at different times after the experiments: 1, 3, 7, 30 and 90 days, which enabled experimentors to track the dynamics of recovery processes. The meninges of five intact animals of the same ages and weight served as a control. Nervous elements were demonstrated by means of silver nitrate impregnation, according to Bielschowsky, in various modifications, followed by gold-plating and additional staining with nuclear-plasma stains. (NASA-CR-161944; Rept-5153-33819) Avail: NTIS HC A04/MF A01 CSCL 06E

Investigation confirmed that GRR images can be consistently obtained and that these images contain information required to detect the optical inequality of one eye compared to the fellow eye. Digital analyses, electro-optical analyses, and trained observers were used to evaluate the GRR images. Two and three dimensional plots were made from the digital analyses results. These plotted data greatly enhanced the GRR image content, and it was possible for nontrained observers to correctly identify normal vs abnormal ocular status by viewing the plots. Based upon the criteria of detecting equality or inequality of ocular status of a person's eyes, the trained observer correctly identified the ocular status of 90% of the 232 persons who participated in this program. **FATIGUE IN FLIGHT INSPECTION FIELD OFFICE (FIFO) FLIGHT CREWS**
C. E. Melton, J. M. McKenzie, S. M. Wicks, and J. T. Saldivar Apr. 1981 51 p refs
(AD-A106791; FAA-AM-81-13) Avail: NTIS HC A04/MF A01 CSCL 06/19

Studies related to FIFO aircrew stress and fatigue were carried out at seven FIFO's in the Continental U.S. Forty-one men served as subjects and all crew positions were presented. Each crewmember was studied during flight activities and during office based activities. Generally, crews were in travel status during flight inspection activities and away from the office for 5 d. Crewmembers completed fatigue checklists before and after each duty on every workday. Urine specimens were collected that represented the night sleep period and the work period; they were analyzed for 17 ketogenic steroids, epinephrine, and norepinephrine, and values were expressed as weight per hundred milligrams of urinary creatinine. Ambulatory electrocardiograms were recorded for determination of heart rate (HR) during work. The data indicate that office work is distinctly less fatiguing than flight work. This finding is supported by the HR data that indicate a lower workload in the office than in flight. The statement is commonly made by crewmembers that office work is more fatiguing than flight work. It is probable that such statements are based on work preference rather than work level. Some crewmembers at Oklahoma City, Atlanta, Los Angeles, and Battle Creek show severe fatigue associated with flight work. GRA

An important aspect of motion sickness research is to establish quantitative relationships between sickness incidence and various parameters of the motions that induce sickness. At present, however, only wholebody vertical sinusoidal motion has been studied to any reasonable degree. The purpose of this report is to examine the predictive utility of six different characterizations of sinusoidal motion and to investigate their possible extension to dual frequency motion. The technical and scientific literature dealing with thoracic injury to or within the rib cage, from blunt loading is reviewed. The history of the development of associated Federal Motor Vehicle Safety Standards is reviewed from the aspect of its relationship to the history of development of the research information. Field case data from car-to-car and car-to-tree/pole crashes has been examined and summarized. This study suggests that the laboratory research has not adequately covered the principal variables found to exist in actual injury cases. Specifically more research attention should be given to the shape of the impactor, to the loading location and directory, and to injuries in the contusion and/or laceration family. Correspondingly, the accident investigation process needs to be more sensitive to occupant/vehicle interior interaction variables so that laboratory research can be properly guided. GRA

Previous investigations by the authors have shown that judgments of frequency or probability have a facilitatory influence on subsequent predictive choice performance. The present study examined both these judgement processes more closely in an attempt to understand how they affect choices. Five groups of subjects served as emergency vehicle dispatchers for a hypothetical city. The experimental design involved a 2 x 2 factorial combination of response set and estimation task. More specifically, response set, defined as expectation of a frequency or probability response requirement, was crossed with actual response requirement, either frequency or probability estimation, in a between-groups design. Compares the performance of good and poor cognitive mappers on a variety of spatial knowledge acquisition and judgment tasks. Cognitive mapping skill was assessed by measuring subjects' knowledge of a highly overlearned environment, their home community. Subjects categorized as good or poor cognitive mappers participated in a series of experiments that examined learning a novel environment from navigation experience, map learning, map using and map interpretation, spatial judgments based on a memorized map, and navigation in a novel environment based on a memorized map. Good mappers performed more accurately than poor mappers in learning a novel environment, learning maps, and making spatial judgments based on a memorized map. Map using, map interpretation, and navigation tasks did not distinguish good from poor mappers. We conclude that, relative to poor mappers, good cognitive mappers are better able to encode and retain spatial information in memory and to mentally transform or manipulate spatial information in order to make spatial judgements, and we hypothesize that differences in spatial visualization and visual memory abilities may underlie these variations in task performance. Author (GRA)

(Contract MDA903-79-C-0549)
(AD-A106389; RAND/N-1667-Army) Avail: NTIS HC A04/MF A01 CSCL 08/2

Compares good and poor cognitive mappers on a number of individual difference variables potentially related to cognitive mapping skill: spatial abilities, visual/verbal processing style, motivation, and experience. Good and poor mapper groups were given several assessment tests for each of these categories. Comparisons of good and poor mappers' performance on these tests indicated that only spatial abilities reliably distinguished good mappers from poor mappers. Good cognitive mappers showed greater visualization ability, spatial orientation ability, visual memory, and field independence. Other measures showed no between-group differences. It is concluded that spatial ability is a major determinant of cognitive mapping skill and that spatial ability tests can be used to select personnel for tasks requiring navigation, orientation, and spatial judgment skills. A method for measuring water binding (a sub w) in gels which was developed and applied to various macromolecular geling agents in order to elucidate their mechanism of water binding was confirmed with concurrent studies using NMR, X-ray diffraction and dye diffusion. The vapor pressure manometric method for a sub w was further refined to give a sub w to + or - 0.0001 units, and a new fiber cup procedure was tested against it. The effectiveness of low a sub w on inhibiting potential toxin production by S. aureus was demonstrated. In addition, ethanol, was shown to be an effective antimicrobial agent at low concentration in lowered a sub w systems. The results of a study of vitamin C loss during processing at high temperature (60-150C) show a change to zero order kinetics due to poor oxygen solubility. Steady state temperature data can be used to predict losses during unsteady state processing. Non-enzymatic browning can be reduced at higher process temperature if residence time decreases. A shelf stable IMF processed cheese food was developed and shown to be acceptable in storage.

**A HYDRODYNAMIC MODEL OF AN OUTER HAIR CELL**

Bo O. Jacobson 1982 14 p refs To be presented at the 19th Ann. Northeast Bioengr. Conf., Hanover, New Hampshire, 15-16 Mar. 1982; sponsored by the Thayer School of Engineering Dartmouth Med. School, IEEE, ASME, and the American Society for Engineering Education
(NASA-TM-82773; E-1086) Avail: NTIS HC A02/MF A01 CSCL 06P

On the model it is possible to measure the force and the force direction for each individual hair as a function of the flow direction and velocity. Measurements were made at the main flow velocity .01 m/s, which is equivalent to a flow velocity in the real ear of about 1 micrometer/s. The kinematic viscosity of the liquid used in the model was 10,000 times higher than the viscosity of perilymph to attain hydrodynamic equality. Two different geometries for the sterocilia pattern were tested. First the force distribution for a W-shaped sterocilia pattern was recorded. This is the sterocilia pattern found in all real ears. It is found that the forces acting on the hairs are very regular and perpendicular to the legs of the W when the flow is directed from the outside of the W. When the flow is reversed, the forces are not reversed, but are much more irregular. This can eventually explain the half wave rectification of the nerve signals. As a second experiment, the force distribution for a V-shaped sterocilia pattern was recorded. Here the forces were irregular both when the flow was directed into the V and when it was directed against the edge of the V.

**THE EFFECTS OF MICROPHONES AND FACEMASKS ON LPC VOCODER PERFORMANCE**

Elliot Singer 25 Sep. 1981 25 p refs
(Contract F19628-80-C-0002; AF Proj. 2283)
(AD-A107908; TR-584; ESD-TR-81-277) Avail: NTIS HC A03/MF A01 CSCL 05/8

The effects of oxygen facemasks and noise cancelling microphones on LPC vocoder performance were analyzed and evaluated. Likely sources of potential vocoder performance degradation included the non-ideal frequency response characteristics of the microphone, the acoustic alterations of the speech waveform due to the addition of the facemask cavity, and the presence of breath noise imposed by the close-talking requirement. It is shown that the presence of the facemask produces a vowel-dependent reduction in the bandwidths of the upper speech formants. In addition, the low frequency emphasis normally associated with small enclosures is shown to occur when a pressure microphone is employed for transduction. Noise cancelling microphones, which are sensitive to the pressure gradient, do not exhibit this effect. Finally, an acoustic tube model of the vocal tract and facemask is presented which predicts the absence of spurious resonances within the frequency band of typical narrowband vocoders. Evidence supporting these assertions is presented based on observed vowel spectra. Evaluations performed using Diagnostic Rhyme Tests indicate that the presence of the oxygen facemask and noise cancelling microphone does not result in a significant increase in the LPC vocoder processing loss. (AD-A107758; AFWAL-TR-81-3011) Avail: NTIS HC 09/MF A01 CSCL 01/3

Five hundred and seventy three USAF pilots responded to a survey which had as its objective the identification of operational, crew station design related causes of high pilot workloads. The survey consisted of mailed survey forms and personal interviews structured to conform with the critical incident technique of collecting user-provided data. The survey canvassed over 50 USAF organizations in collecting data for more than 30 currently flown USAF aircraft types. The role of control/display design, crew station design, and equipment malfunctions play in contributing to cockpit workload is unique to each aircraft. Other factors, such as weather, flight schedules, and mission phase appear to contribute to cockpit workloads in most all the aircraft surveyed. Further, the reported situations, or critical incidents, indicate that high workloads result from the simultaneous occurrence or existence of several causes. For example, a high workload situation reported for the FB-111 consisted of an equipment failure while flying the low level penetration portion of a mission at night. All data collected has been catalogued for the establishment of an information base, and available for future use in conjunction with aircraft development programs or modernization/retrofit programs. Four specialized biological satellites in the Cosmos series conducted research to study the mechanisms of the effect of weightlessness, the combined effect of weightlessness and ionizing radiation, and the biological effect of artificial gravity on living systems. Devices developed included: a centrifuge for the creation of artificial gravity, an irradiator, instruments for rowing and fixing plant organisms. The cardiovascular system as studied during the so-called period of acute adaptation to weightlessness (the first 7 days of a flight). Special features of central and peripheral blood circulation and blood circulation in the brain were studied. A ballistic cardiography method judged the contractive function of the evaluated dynamics of blood flow, and detected functional disruptions in the cardiovascular system. A densiotography method was also used. An 'Oxygen' physiological experiment was performed utilizing a portable 'Oxymeter' instrument to determine oxygen pressure level changes and its consumption by body tissues. Radiation safety tests were also conducted using thermoluminescent dosimeters. Results of these tests are given. A center for processing of the data and hygienic and biophysical information that serves as a consultative-prognostic group is also described.

**SOME MECHANISMS OF CALCIUM TRANSPORT BY THE CARDIAC SARCOLEMMA** Ph.D. Thesis

Ronald F. Ledvora 1981 80 p
Avail: Univ. Microfilms Order No. 8124733

Purified sarcolemmal membrane vesicles were prepared from frozen dog heart ventricles by a combination of differential and sucrose step gradient ultracentrifugation. The Ca ++ flux measurements were made using a rapid filtration technique. About 80 percent of the Ca(++) accumulated by Na(+)/Ca(++) exchange or Ca(++)/Ca(++) exchange could be released as free Ca(++), while up to 20 percent was probably bound. The mechanisms for Na(+)/Ca(++) exchange and Ca(++)/Ca(++) exchange are located in the sarcolemmal membrane of cardiac muscle cells. Both processes transport freely-exchangeable Ca(++) across the membrane. Electrogenic Na(+)/Ca(++) exchange may influence the excitability of the cardiac muscle cell. Both processes are probably carrier mediated transport mechanisms, although not by the same carrier. Both Na(+)/Ca(++) exchange and Ca(++)/Ca(+) exchange probably play important roles as Ca(++) homeostatic mechanisms in the cardiac muscle cell. Dissert. Abstr.

### PROTEINS IN PHOTOSYSTEM 1 AND THE LIGHT HARVESTING COMPLEX OF PHOTOSYSTEM 2 Ph.D. Thesis

John Emerson Mullet 1980 150 p
Avail: Univ. Microfilms Order No. 8127654

The functional units of chloroplast membranes which mediate photosynthetic electron transport from water to NADP are structurally organized into integral complexes. Two of these membrane-bound complexes, Photosystem I (PSI) and Photosystem II (PS II), consist in part of chlorophyll proteins. Photosystem I complexes were isolated by a technique which allowed purification of PSI which retained characteristics attributed to PS I in vivo. The purified PS I complexes were further fractionated by detergent treatment and PS I complexes which were depleted of chlorophyll proteins were isolated. The major chlorophyll-protein of chloroplast membranes which is structurally organizing into light harvesting complexes associuted with PS II was isolated and characterized and its role in thylakoid adhesion tested. The chlorophyll-protein complex, termed LHC-II, were incorporated into lipid vesicles: this preparation was used to demonstrate the involvement of LHC-II in cross-membrane adhesion between thylakoid membranes. Dissert. Abstr.

### EFFECT OF STATIONARY MAGNETIC FIELD ON THE ENDOCRINE SYSTEM

Ye. A. Zagorskaya *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 14-20 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 14-17
Avail: NTIS HC A07/MF A01

It is indicated that endocrine glands react to the constant magnetic field (CMF). The phasic pattern of the hypophyseal-adrenal reaction and GMF effects on the sympathoadrenal system and thyroid are discussed. The potential therapeutic applications of the CMF is addressed with emphasis on the fact that most morphological data available need biochemical support. J.M.S.

### AMINO ACID METABOLISM DURING PROLONGED INTAKE OF DEHYDRATED FOODS AND SIMULATION OF SOME SPACE FLIGHT FACTORS

V. P. Bychkov, I. I. Borodulina, and T. F. Vlasova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 26-29 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. Oct. 1981 p 21-23

Avail: NTIS HC A07/MF A01

Forty-two healthy volunteers, aged 19 to 40, participated in three bed rest studies of 69 to 180 days in duration. The test subjects were kept on the diet consisting of dehydrated foods: fresh, stored for up to 2 years, and exposed to proton irradiation at a dose of 24,000 rad. Metabolism of amino acids was investigated under these conditions. It was concluded that during prolonged storage and irradiation proteins of dehydrated foods retained their biological value. This allows their use in long term space flights. Author

### PREVENTION OF STAPHYLOCOCCAL INFECTIONS DURING SPACE FLIGHTS

S. N. Zaloguyev, A. N. Viktorov, V. P. Gorshkov, T. Yu Norkina, and M. M. Shinkareva *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 35-38 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 27-29
Avail: NTIS HC A07/MF A01

The incidence of carriers of photogenic staphylococci among cosmonauts and candidates (applicants) for positions of crew members in spacecraft was investigated. The staphylococcal flora of carriers were assessed while they participate in space flights varying in duration. Samples of microflora were taken from people in their ordinary habitat by means of cotton swabs. To collect samples of miroflora from cosmonauts while in the cabin of a spacecraft, specially developed test tubes containing a preservative were used. The material was analyzed under laboratory conditions after delivering specimens to Earth. Pathogenic staphylococci (Staph. aureus) were identified by testing the capacity to decompose mannitol under anaerobic conditions, production of the enzymes, coagulase and lecithinase, as well as on the basis of presence and intensity of toxin production, in the isolated cultures. The strains of pathogenic staphylococci were submitted to phage typing using the international set of staphylococcal bacteriophages. J.M.S.

### HUMAN ADRENOSYMPATHETIC SYSTEM DURING IMMERSION IN WATER

N. A. Davydova, R. A. Tigranyan, and Ye. B. Shulzhenko *In its*

USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 39-44 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 30-34

Avail: NTIS HC A07/MF A01

The activity of the sympathoadrenal system (SAS) of 12 volunteers exposed to water immersion for 7 days was studied. Before and after water immersion, six of the test subjects were exposed to acceleration of +3 Gz for 15 min. It was demonstrated that water immersion increased the hormonal activity and decreased the transmitter activity of the SAS. Exposure to acceleration stimulated the SAS, thus increasing immersion tolerance. Author

**COMBINED EFFECT OF SIMULATED WEIGHTLESSNESS AND ACCELERATIONS ON ENERGY METABOLISM ENZYMES**

Ye. G. Vetrova, T. Ye. Drozdova, R. A. Tigranyan, and Ye. B. Shulzhenko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 45-49 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 34-38

Avail: NTIS HC A07/MF A01

Exposure to simulated weightlessness (7 day water immersion and 7 day head-down tilt) caused a decrease in the activity of malate (MDH) and isocitrate dehydrogenase (ICDH), and creatine phosphokinase (CPK) at the expense of its MM isoform whereas the activity of alanine (ALT) and aspartate aminotransferase (AST) and pattern of distribution of MDH isoforms remained unchanged. Exposure to acceleration of +3 Gz before and after simulated weightlessness revealed similar changes in the activity of MDH, ICDH, ALT, AST and MDH cytoplasmic fractions. However, the higher increase in the enzyme activity after simulated weightlessness may give evidence for a greater change in cell membrane permeability during acceleration effects that followed simulated weightlessness. Author

**HUMAN LIPID METABOLISM DURING CONFINEMENT IN PRESSURE CHAMBER**

V. P. Bychkov and O. S. Khokhlova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 55-58 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 41-43

Avail: NTIS HC A07/MF A01

The effect of prolonged enclosure, changed diet, atmosphere, and hypolinesia on lipid metabolism was investigated in 115 test subjects during 27 experimental runs. It was conducted that the changes in lipid metabolism occurred primarily due to reduced work load. Author

**N82-17824#** Joint Publications Research Service, Arlington, Va.

**VITAMIN C, B SUB 1 AND B SUB 6 EXCRETION IN URINE DURING 182-DAY ANTIORTHOSTATIC HYPOKINESIA**

V. P. Bychkov and V. A. Korshunova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 63-67 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 46-49

Avail: NTIS HC A07/MF A01

Renal excretion of ascorbic acid, thiamin, and 4-pyridoxic acid was studied in 18 test subjects exposed for 182 days to head-down tilt. Two groups of subjects (6 subjects in each) performed exercises of different work load and the third control group was exposed to hypokinesia as such. It is shown that exercises produced a beneficial effect on vitamin metabolism. It is recommended to develop preliminary adaptation to the work load planned as a countermeasure in real or simulated weightlessness. Author

**JUGULAR, RIGHT ATRIAL PRESSURE AND CEREBRAL HEMODYNAMICS OF HEALTHY MAN SUBMITTED TO POSTURAL TESTS**

V. Ye. Katkov, V. V. Chestukhin, V. V. Rumyantsev, A. Z. Troshin, and O. Kh. Zybin *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 6873 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 49-53

Avail: NTIS HC A07/MF A01

Ten test subjects were catheterized and exposed to head up and head down tilts at 10, 30, and 75 deg for 5 min each to measure blood pressure in the upper bulb of the internal jugular vein and right atrium. Blood acid base equilibrium, hemoglobin content, and oxygen saturation were also determined. In the head up position at 75 deg the jugular pressure decreased, remaining positive (2.8 mm Hg) in most cases, whereas the atrial pressure fell down to reach the subatmospheric level. In the head down position the jugular pressure increases in proportion to the tilt angle, amounting to 32.2 mm Hg at 75 deg the atrial pressure changed in a different fashion: in 7 cases it increased and in 3 cases decreased. Throughout the test the oxygen arteriovenous difference in the brain and the acid base equilibrium in the outflowing blood remained essentially unchanged. This reflects autoregulation of the cerebral blood flow and its adequacy to metabolic requirements. Author

### AGE RELATED DISTINCTIONS OF COSMONAUTS REGIONAL HEMODYNAMICS

I. D. Vasilyeva, Kh. Kh. Yerullin, and V. I. Zhuyko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 82-90 ref Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 61-64

Avail: NTIS HC A07/MF A01

Hemodynamics of the large hemispheres of the brain, vertebral basilar system, lungs and legs of 60 cosmonauts aged 30-37 and 38-47, were investigated rheographically. Measurements were made in the morning, under conditions of basal metabolism and in the daytime, before orthostatic tests. Comparison of hemodynamic parameters recorded in the morning and at the daytime and in the two age groups showed significant differences revealing the effects of different factors, first of all psychoemotional tension, on the vasomotor regulation, and greatest resistance of cerebral and pulmonary vascular systems of older cosmonauts to those effects. These investigations emphasize great importance of studies of regional hemodynamics, especially rheoencephalography, not only before provocative tests but also under conditions of basal metabolism. ### RAT AMINO ACID COMPOSITION AFTER FLIGHT ABOARD COSMOS-1129 BIOSATELLITE

T. F. Vlasova, Ye. B. Miroshnikova, T. A. Smirnova, and I. A. Dmitriyeva *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 95-97 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 66-68

Avail: NTIS HC A07/MF A01

Data concerning the amino acid pool of rats flown onboard Cosmos-1129 and exposed to the ground based synchronous experiment are presented. Certain changes in the amino acid pool of flight and synchronous rats were found. The changes seem to be associated with the selective rate of incorporation of free amino acids into the biosynthetic processes during acute adaptation and with alterations in the protein synthesis rate. J.M.S.

**N82-17832#** Joint Publications Research Service, Arlington, Va.

### MYOCARDIAL PROTEIN FRACTIONS AND ENZYMATIC ACTIVITY THEREOF IN EXPERIMENTAL RATS FLOWN ABOARD COSMOS-936 BIOSATELLITE

R. A. Tigranyan, Ye. A. Nosova, Ye. V. Kolchina, N. A. Veresotskaya, L. M. Kurkina, and N. S. Kolganova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 98-102 refs Transl. into ENGLISH fom Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 68-71

Avail: NTIS HC A07/MF A01

The effect of artificial gravity on protein fractions and their enzyme activity in the myocardium of rats flown onboard Cosmos-936 was studied. In weightless rats the content of sarcoplasmatic proteins increased at R + 0 and that of T fraction proteins decreased at R + 25. In centrifuged rats such changes were not seen. In centrifuged rats the enzyme activity of sarcoplasmatic proteins did not alter. In weightless rats ATPase activity of myosin decreased significantly, and in centrifuged rats it remained almost unchanged. Author

### ACTIVITY OF SOME ENZYMES OF CARBONHYDRATE METABOLISM IN RAT SKELETAL MUSCLES AFTER SPACE FLIGHT

V. P. Nesterov, N. A. Veresotskaya, and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 p 108-112 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 75-78

Avail: NTIS HC A07/MF A01

Space flight factors did not influence activity of glycogen phosphorylase and adenylate cyclase in skeletal muscles of rats. Activity of glucose-6-phosphate and 6-phosphogluconate dehydrogenases increased noticeably in the most active muscles (gastrocnemius and tibialis anterior muscles). Activation of enzymes involved in the pentosephosphate pathway of glucose conversion may be associated with compensatory processes induced by muscle changes due to diminished motor activity of animals in space flight. Author

### ULTRASTRUCTURE OF BLOOD VESSELS AND MUSCLE FIBERS OF RAT SKELETAL MUSCLES AFTER FLIGHTS ABOARD COSMOS-605 AND COSMOS-782 BIOSATELLITES

Z. F. Davik and K. D. Rokhlenko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 113-118 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 78-83

Avail: NTIS HC A07/MF A01

Electron microscopy was used to study ultrastructures of the wall of blood vessels and muscle fibers of the red (soleus) and mixed gastrocnemius) muscles of rats flown on Cosmos 605 for 22.5 days and on Cosmos 782 for 19.5 days and sacrificed 4 to 6 hours, 48 hours and 25 to 27 days postflight. It was demonstrated that the orbital flight did not induce significant changes in the ultrastructure of blood vessels of the soleus and gastrocnemius muscles but caused atrophy of muscle fibers and reduction of the number of functioning capillaries. Readaptation of the soleus vascular system to 1 g led to degradation of permeability of capillary and venular walls and development of edema of the perivascular connective tissue. This may be one of the factors responsible for dystrophic changes in muscle fibers. Author

**BLOOD FIBRINOGEN AS RELATED TO IMMERSION IN WATER FOR SEVEN DAYS AND SHORT-TERM SPACE FLIGHT**

A. N. Fomin *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 119-122 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 83-85

Avail: NTIS HC A07/MF A01

A scrutiny of the literature dealing with hemocoagulation under hypokinetic conditions revealed that blood fibrinogen was studied exclusively in conjunction with other parameters characterizing the blood clotting system. Increase in fibrinogen concentration in blood was demonstrated in individuals submitted to prolonged hypokinesia, patients restricted to bed rest and animals used in experiments with hypokinesia. Blood tests were made on six healthy men before, during, and after seven days of immersion in water as well as cosmonauts before and after seven and four day flights. The microtechnique for measuring the concentration of fibrinogen in blood is based on the phenomenon of heat denaturation of this protein at a temperature of 56 C. Results indicate that the fibrinogen increased during the four to six days of the study. J.M.S.

**METHOD OF ASSESSING INDIVIDUAL RESISTANCE OF RATS TO HYPOXIC HYPOXIA**

Yu. V. Farber, A. Yu. Grigoryev, and A. I. Yelfimov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 123-125 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 85-86

Avail: NTIS HC A07/MF A01

The question of screening experimental animals according to resistance to hypoxia is addressed in view of the need to investigate individual distinctions with regard to resistance to the body to various extreme factors, including a shortage of oxygen. There are some methodological approaches to the study of this question. In particular, one determines coefficient K as the ratio of rat survival time at an altitude of 12,000 m to restitution time. Experimental data on individual reactions to acute hypoxic hypoxia, which are obtained by determining the time of retention of the postural reflex with a static load are presented. J.M.S.

**STUDY OF HOMING PIGEONS IN BRAZIL: SOME PRELIMINARY RESULTS**

R. Ranvaud Oct. 1981 16 p refs Presented at Intern. Symp. on Avian Navigation, Tirrenia, Italy, 14-18 Sep. 1981

(INPE-2248-PRE/032) Avail: NTIS HC A02/MF A01

Observations of vanishing bearings are described. The ability of pigeons to home quite well under some rather unfavorable conditions, namely with the Sun not too far from the zenith and under total overcast in relatively weakly inclined magnetic fields, as well as in cases where the inclination of the magnetic field actually reverses during the flight home is discussed. Homing in regions where the apparent diurnal motion of the Sun's azimuth reverses during the year, the midday Sun being to the north in June and to the south in December, is reported. Homing right across the so called south atlantic anomaly, at which the principal component of the Earth's magnetic field has an absolute minimum, providing a situation in which the gradient of total intensity is zero in all directions, is also reported. The Respiratory Toxicology research programs conducted at the Toxic Hazards Research Unit (THRU), Wright-Patterson Air Force Base by the University of California, Irvine are reviewed in this annual report. Preliminary results are presented of studies concerning: (1) the effect of propylene glycol dinitrate on the cardiovascular system in the dog; (2) the evaluation of pulmonary clearance after exposure to 1.2 ppm of ozone, and (3) the evaluation of small airway test sensitivity in enzyme induced emphysema. Earlier studies have shown that intraperitoneal administration of naphthalene causes selective pulmonary bronchiolar necrosis in mice and have suggested a role for reactive naphthalene metabolites in the tissue damage. These studies have been extended to show that covalent binding of reactive naphthalene metabolites to tissue macromolecules in lung, liver and kidney is dose-dependent. High levels of covalent binding occur only after tissue glutathione levels are depleted substantially and only at doses of 200 mg/kg and above. The 200 mg/kg dose is the lowest dose at which lung lesions are observed. Piperonyl butoxide pretreatment decreases pulmonary damage and covalent binding and partially blocks glutathione depletion by 400 mg/kg naphthalene. In comparison, SKF 525 A pretreatment decreased covalent binding levels to a much smaller extent and failed to alter glutathione depletion or pulmonary damage after 400 mg/kg naphthalene. When compared to vehicle pretreated controls, phenobarbital or 3-methylcholanthrene pretreatment produced no change in the severity of lung damage after doses of naphthalene ranging from 50 to 400 mg/kg nor did these inducers alter covalent binding at doses of naphthalene of 200 mg/kg or less. Pretreatment of mice with p-xylene preferentially inactivated pulmonary cytochrome p450 and blocked naphthalene induced lung damage but failed to selectively decrease covalent binding of reactive metabolites in the lung. Current studies are continuing to examine the role of cytochrome P450 dependent metabolic activation of naphthalene in the lung in the bronchiolar damage. Author (GRA)

**FOR THE ENDOVESICAL Nd:YAG-LASER APPLICATION**
T. Halldorsson 5 Jun. 1981 25 p refs In GERMAN; ENGLISH summary
(MBB-UA-581-81-O) Avail: NTIS HC A02/MF A01

The laser irradiation power needed for tumor therapy was investigated. From considerations of the absorptivity of cellwater and blood as well as the multiple scattering of the radiation and heat conduction in tissue, a theoretical model was developed which enabled an accurate calculation of the temperature distribution up to the denaturation point as well as the percentage of the radiation power lost through backward and forward scattering of light. The theoretical calculations were experimentally verified in animal experiments and measurements on specimens of human bladder tissue performed with a thermocamera. According to the requirements of endoscopic laser therapy, a medical Nd:YAG laser system was developed. For the beam transport into the urinary bladder, flexible light pipes made from thin quartz fibers were used. A.R.H.

The biological effects of commercial frequency electromagnetic fields (CFEMF) generated by high voltage electric power lines on the gonads of male rats were investigated. The effect of CFEMF on the endocrine function of rat tests consists of an intensification of steroidogenetic processes and a corresponding increase in the activity of the steroid delta(5)-3 beta-o1 dehydrogenase. No appreciable changes in testosterone levels in peripheral blood plasma were observed following CFEMF irradiation for a period of four months. J.D.H.

F. A. Kolodub, O. N. Chernysheva, and G. I. Yevtushenko *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 6-10 refs Transl. into ENGLISH from Kardiologiya (USSR), v. 21, no. 4, Apr. 1981 p 82-85
Avail: Issuing Activity

The effect of alternating magnetic fields of various voltages and exposures on the metabolism of carbohydrates, macroergic phosphates, and low molecular nitrogen compounds in the rat heart was investigated. The direction and degree of metabolic disturbances in the myocardium after exposure to industrial frequency alternating magnetic fields depend on the voltage of the field and the length of exposure. An alternating magnetic field with a voltage of 32 kA/m delays oxidation and phosphorylation processes without affecting their coupling, and the proportion of oxidized carbohydrates increases as compared with fatty acids. The conversion of carbohydrates and of nitrogen substances are stimulated by an alternating magnetic field with a voltage of 7.5 kA/m. J.D.H.

**INFLUENCE OF ELECTROMAGNETIC WAVES IN MILLIMETER BAND ON INDUCTOPROTEIN SYNTHESIS OF PENICILLINASE BY STAPHYLOCOCCUS AUREUS**
A. Z. Smolyanskaya, A. M. Makhov, E. A. Gelvich, and M. B. Golant *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 11-16 refs Transl. into ENGLISH from Biol. Nauki (USSR), no. 5, May 1981 p 24-28
Avail: Issuing Activity

The effect of electromagnetic waves in the millimeter band on the synthesis and activity of pencillinase produced by strains of Staphylococcus aureus and Escherichia coli is examined. Experiments demonstrated that wave lengths of 5,478 and 6,466 mm inhibit the induction of the enzyme by St. aureus. However, this type of radiation does not affect the activity of the exoenzyme released from the St. aureus strain, and also does not affect the constitutive synthesis of the penicillinase by E. coli. The relationship of effect of the duration of irradiation, bacterial population, and the strength of current density is elucidated. Author

**PARTICULAR FEATURES OF CONDITIONED ELECTRODEFENSIVE REFLEX IN WHITE RATS ON BACKGROUND OF CONSTANT MAGNETIC FIELD**
I. V. Shust, S. I. Galantyuk, and Yu. V. Cheretyanko *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 44-50 refs Transl. into ENGLISH from Fiz. Zh. (USSR), v. 26, no. 2, Mar. - Apr. 1980 p 264-268
Avail: Issuing Activity

The formation of a conditioned electrodefensive reflex in white rats exposed to a 1,000 Oe constant magnetic field was investigated. The influence of the vitamin preparation galascorbin on the formation of the reflex was also studied. The tenacity of the conditioned reflex was reduced by exposure to the CMF, with a greater reduction observed in the initial phase of its development. Changes in conditioned reflex activity were observed during exposure and during the aftereffect period. The threshold of the avoidance reaction initially increased, then decreased, with normalization of the indicator observed until the end of the experiment. Administration of galascorbin promoted tenacious development of the conditioned reflex, which remained more pronounced in the CMF aftereffect period. J.D.H.

A. V. Shakula and G. M. Chernyakov *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 56-59 refs Transl. into ENGLISH from Gig. Sanit. (USSR), no. 9, Sep. 1981 p 11-13
Avail: Issuing Activity

The activity of key brain enzymes of rabbits whose embryonic and early postnatal development occurred during exposure to a hypogeomagnetic field was investigated. The activity of succinate dehydrogenase (SDH), glucose-6-phosphate dehydrogenase (G-6-PDH), tetrazolium oxyreductase (NAD-H), and hexokinase (HK) as determined. Histological examination of neuronal bodies of the cortex, of astroglia and oligodendroglia revealed very high G-6-PDH and NAD-H activity, moderate SDH activity, and mild HK activity. A hypogeomagnetic field was found to be a biologically active factor having an adverse effect on the enzymes regulating energy metabolism. J.D.H.

**MUSCLE, MOTOR CORTEX, CEREBELLAR NUCLEAR, AND SPINDLE AFFERENT DURING SLOW HOLD-RAMP-HOLD POSITION-TRACKING MOVEMENTS OF THE MONKEY'S WRIST Ph.D. Thesis**
Marc Hudson Schieber 1982 469 p
Avail: Univ. Microfilms Order No. 8122756

Two Rhesus monkeys were trained to perform flexion and extension wrist movements guided by a tracking display. The monkey used a wrist position control to operate a cursor with which he pursued a visual target. The target, and therefore the monkey's wrist, moved in slow hold-ramp-hold (HRH) trajectories. By changing parameters of the target's trajectory, changes were produced in the parameters of the monkey's wrist movement. The second monkey was trained additionally to perform self-spaced alternating wrist movements and to receive occasional pulses of torque about the wrist. It is hypothesized that during slow HRH wrist movements, two parallel motor systems operated in relative dissociation. The first system included class I motor cortex neurons, alpha motoneurons, and extrafusal muscle. The second system included class II motor cortex neurons, nearly all related dentate and interposed neurons, gamma motoneurons, and spindle afferents. This system could have provided for the continuous acquisition of dynamically sensitive spindle afferent feedback constantly maintained in the face of widely varying peripheral conditions. Dissert. Abstr.

**FACILITATED DIFFUSION OF SMALL NON-ELECTROLYTES IN THE HUMAN RED BLOOD CELL**
Robert Ray Mayrand 1981 130 p
Avail: Univ. Microfilms Order No. 8125691

The design of a new simple continuous flow system for the analysis of rates of permeation of small non-electrolytes across human red cell membranes is described. With this system it was demonstrated that ethylene glycol equilibrium exchange is saturable, KM = 175 mM, and inhibitable, glycerol K1 = 1200 mM. Ethylene glycol yielded a permeability coefficient of P sub s = .000336 cm/s. Urea equilibrium exchange was also examined with the continuous flow system. Saturation was again observed, KM = 218 mM. The maximal rate of urea exchange was P sub s = .000808 cm/s. The estimated non-inhibitable (presumably through the lipid) portion of urea equilibrium exchange was .0000258 cm/s which is 3.2 percent of the maximal rate. Dissert. Abstr.

**TEMPORAL INTEGRATION OF ACOUSTIC POWER FOR INTERRUPTED STIMULI AT SUPRATHRESHOLD LEVELS Ph.D. Thesis**
Joyce Rodriguez-Amblet 1981 132 p
Avail: Univ. Microfilms Order No. 8125375

Threshold and suprathreshold temporal integration data employing experimental variables were investigated. Data were collected to experimental conditions: three stimulus types, nine signal durations and four presentation levels including threshold. Subjects were three normal hearing listener who participated in 20 practice sessions and 12 test sessions of 20 minutes each. Mean threshold and point of subjective equality (PSE) values were calculated for each subject and each experimental condition. It is indicated that the constants of the function are a product of the interaction between stimulus type and intensity as incorporated in a two part linear regression model. It is suggested that critical duration decreases with intensity and is essentially independent of stimulus type at 50 db and 80 dB SPL. The slope of the function varies as a function of intensity and stimulus type, being largest for 1000 Hz and smallest for white noise. These findings are discussed in terms of Zwislocki's exponential theory of loudness summation. Dissert. Abstr.

**QUANTIFICATION OF PSYCHOACOUSTIC TUNING CURVE SHARPNESS: AN ANALYSIS OF FREQUENCY RESOLUTION IN CHILDREN AND ADULTS Ph.D. Thesis**
Neal Alan Sloane 1981 120 p
Avail: Univ. Microfilms Order No. 8126067

Probe tone frequencies were pulsed with a rise/fall time of 50 msec., duration of 400 msec., and were delivered at 10 dB SL using a simultaneous masking paradigm. Masked threshold was determined using a modified Hughson-Westlake technique. After the first set of tuning curves was obtained, each subject returned in 24 hours to replicate the test. Results show that the main effect for age is nonsignificant, the main effect for sessions also is nonsignificant, the main effect for frequency is significant, and all possible interactions are nonsignificant. A Tukey Test, calculated for the main effect of frequency, established that all three tuning curves differ significantly from one another in sharpness, it is concluded that within the age range under study, age does not influence tuning curve sharpness. d sub 1 oct. values do not change significantly across experimental sessions, and tuning curves increase significantly in sharpness across probe tone frequencies of 500, 1000, and 2000 Hz. Dissert. Abstr.

**N82-17858** Florida State Univ., Tallahassee.
**A STUDY OF THE ACOUSTIC REFLEX AS ELICITED BY SELECTED ENVIRONMENTAL NOISE STIMULI Ph.D. Thesis**
Marshall Melvin Smith 1981 114 p
Avail: Univ. Microfilms Order No. 8125790

The acoustic reflex thresholds (ARTs) for the environmental noise ranged from 78.83 through 81.78 db SPL. The ARTs for the white noise, and the pure-tone were 81.38 and 95.19 dB SPL, respectively. For all practical purposes (19%) the ARTs for the environmental noises lie within + or - 5 db of the ART for the white noise. The latency at threshold for the environmental noises ranged from 452.5 through 552.50 msec. Similarly, the latencies were 402.5 and 487.5 msec for the white noise and the pure-tone, respectively. The latency at dB SL sub R (20 dB above the threshold) for the environmental noises ranged from 152 through 180 msec. There was a decrease in latency at 20 dB SL sub R compared to that at threshold across all the stimuli. The contraction rate at 20 dB SL sub R for all stimuli ranged from .0008 through .0011 cc/msec. The contraction magnitude at 20 dB SL sub R for all the environmental noises and the white noise ranged from .669 through .816 cc. Dissert. Abstr.

**STUDIES ON STRUCTURE AND FUNCTION RELATIONSHIP IN FIBRINOGEN Ph.D. Thesis**
Nadia Aldyth Carrell 1981 160 p
Avail: Univ. Microfilms Order No. 8125561

The literature concerning the chemical properties of fibrinogen and the mechanisms of fibrinogen function was reviewed. The experimental work was aided by the availability of two patients with congenital molecular variants of fibrinogen and one patient with an inhibitor to fibrin polymerization. The fibrinogen level in the first patient was found to be about one third of the normal level by both coagulation and immunologic methods. The second patient had a low plasma level of clotable protein with normal antigen concentration, high amounts of fibrinogen related material in serum, and prolonged thrombin and reptilase clotting times. The third patient developed an inhibitor which markedly prolonged the thrombin and reptilase times of both patient and normal plasmas. A procedure was developed to direct chemical modifications selectively at lysine residues which function in polymerization. An assay to measure the binding of fibrinogen to fixed washed platelets was developed. Dissert. Abstr.

**N82-17860** Florida Univ., Gainesville.
**FORWARD MASKING OF AUDITORY NERVE (N SUB 1) AND BRAINSTEM RESPONSES (WAVE V) IN HUMANS Ph.D. Thesis**
Steven John Kramer 1981 186 p
Avail: Univ. Microfilms Order No. 8127440

The influence of a response to one sound (probe) another sound (masker) when the two sounds occur simultaneously or in a temporal relation was demonstrated. The effects of forward masking on wave-V of the ABR along with N responses recorded simultaneously (on a separate channel) from the ear canal were investigated. Postmasking recovery functions were measured for different masker durations, masker levels, and masker low frequency cutoffs (high-pass masking). The effects on wave-V were different than on N1. The primary effects of forward masking on the probe responses were decreases in N1 amplitude and increases in wave-V latency. Characteristic changes in the recovery functions for variations on masker parameters were found. It is suggested that the relation between wave-V latency and N1 amplitude, along with other characteristics of underlying mechanisms include a recording of the neutral input (N1) within the brainstem pathways generating the wave-V potential. Dissert. Abstr.

**N82-17861** Ohio Univ., Athens.
**HUMAN AUDITORY BRAINSTEM ELECTRIC RESPONSES TO BINAURAL AND MONAURAL STIMULI Ph.D. Thesis**
Paul Alfred Lobaugh 1981 149 p
Avail: Univ. Microfilms Order No. 8126058

The auditory brainstem electric response (ABER) is recorded from electrodes attached to the scalp of humans and consists of a series of sub-microvolt peaks which occur in the 10 ms period following presentation of simple auditory stimuli such as clicks. The ABER differences due to binaural and monaural stimulation which are defined as binaural interaction are investigated. It is also possible that binaural signal processing, if reflected by the ABER, may occur in an asymmetric manner. The effects of a stimulus variable, click polarity, and a subject variable, headsize, upon the ABER are studied. Click-evoked ABERs were acquired from 44 normally hearing adolescent and adult subjects. Responses to binaural and monaural stimulation were analyzed. It is concluded that polarity of the stimulus does not affect ABERs in response to 60 and 70 dB SL clicks. For 80 dB SL stimulation, negative polarity clicks evoke shorter latency waves than do positive polarity clicks. Dissert. Abstr.

**PHYSICAL PERFORMANCE TASKS REQUIRED OF U. S. MARINES OPERATING IN A DESERT ENVIRONMENT**
Paul O. Davis, Arthur V. Curtis, Jr., and Steven A. Bisby Nov. 1981 62 p refs
(Contract N00014-80-C-0473)
(AD-A107866; TR-7) Avail: NTIS HC A04/MF A01 CSCL 15/7

Nine representatives of the Institute of Human Performance were integrated into a marine battalion during a CAX (combined arms exercise) for the purpose of gathering descriptive and objective information regarding the nature and types of physical performance tasks encountered by marine infantrymen (MOS 0311) during desert combat. Through the use of minicassette recorders, scales, cameras and other data collection equipment, scenarios were described which typify the critical, frequent and strenuous types of tasks indigenous to marines in this environment. Distances covered on foot, loads carried, rates of travel and grades encountered are detailed and described as well as other environmental overlays which impact on troop performance. It was determined that for the most part, a mechanized, motorized combat scenario does not require high levels of physical ability; however, fire team rushes represent a critical scenario, with high levels of aerobic and anaerobic power, particularly when performed in ambient temperatures of 100-107 F. A taxonomy of physical tasks from this environment will be added to physical performance data from other Marine Corps theaters of operations for the purpose of developing a complete job analysis of activities involving strength and endurance factors. The first project is concerned with the relationship between initiation of cancer by chemicals and the damage and repair of DNA in cells and tissues susceptible to the carcinogenic action of the chemicals. The working hypothesis is that interaction of the carcinogen with cellular DNA is a necessary step in carcinogenesis and that this interaction may cause DNA damage which is then followed by DNA repair synthesis. The second project was conducted with the cooperation of the staff of the Toxic Hazards Research Unit at AMRL, WPAFB. Rats and hamsters were exposed by inhalation to hydrazine at 750 ppm for one hour. Groups of animals which had been exposed only once or which had been exposed 10 times were shipped to UC Irvine for study. The factors studied were (1) DNA replication in the lung; (2) DNA repair synthesis in the lung; (3) Cellular replication in the lung and nasal turbinates; and (4) Metabolism of a known lung carcinogen, 3H-benzo(a)pyrene, by lung slices from the treated animals. The third project was initiated during the current year with the goal of developing an animal model in which biochemical and cytogenetic factors could be studied during the process of tumorigenesis. Range-finding studies are underway at the Toxic Hazards Research Unit (THRU) to establish the intratracheal dosage of 3-methylcholanthrene (MCA) necessary to produce a high yield of lung tumors in Fischer 344 rats within 12 months. Oral administration of the inorganic hepatotoxin, hydrazine, to male Fischer 344 or Sprague Dawley rats results in the endogenous methylation of liver DNA at the 7- and O6-positions of guanine. At doses below the LD50 (45, 60 or 75 mg hydrazine/kg body weight), methylation levels varied little and averaged about 500 micromol 7-methylguanine/mol guanine and 20 micromol O6-methylguanine/mol guanine. At 90 mg hydrazine/kg body weight (approximately the 7-day LD50) the

methylation levels were 869 micromol 7-methylguanine and 58 micromol O6-methylguanine/mol guanine 24 hours after toxicant administration. A single dose of 3 mg hydrazine/kg body weight did not result in detectable levels of methylguanines in liver DNA; however, after three or four daily administrations of hydrazine at this dose, liver damage was evident, and liver DNA contained 50-100 micromol 7-methylguanine/mol guanine, about the limit of analytical detection. Following a single oral administration of 90 mg hydrazine/kg body weight, liver DNA guanine rapidly became methylated. The time for half-maximum alkylation at 7-guanine was 30 minutes and at O6-guanine, 45 minutes. The rates of removal of these methylated bases were consistent with published values from experiments using methylating carcinogens and with values obtained in this laboratory with the model compound, 1,2-dimethylhydrazine.

**A MODEL FOR ESSENTIAL HYPERTENSION: METABOLIC STUDIES Ph.D. Thesis**
James Patterson Church 1981 101 p
Avail: Univ. Microfilms Order No. 8126862

The extent to which blood pressures and tissue lipid levels are manipulated by dietary control of low levels of essential fatty acids in rat strains used as models of hypertensive and normotensive man were determined. Procedures included gravimetric total lipids, colorimetric cholesterol and phospholipids, fluorimetric triglycerides and gas liquid chromatographic fatty acids. Samples were taken from plasma liver and kidney. Total lipids were lower in plasma, liver, and kidney of the SHR than the WKY. Liver triglyceride and kidney cholesterol and phospholipid (PL) were lower with liver PL higher in SHR than in WKY. Total individual fatty acids in plasma and in neutral lipid and PL fractions of liver and kidney exhibited several strain and diet differences. A high metabolic rate in the SHR suggests defective transport of essential fatty acids from the liver. Dissert. Abstr.

**CEREBRAL HEMISPHERIC ACTIVITY AND AUTOMONIC NERVOUS FUNCTION Ph.D. Thesis**
Deborah Ann Werntz 1981 130 p
Avail: Univ. Microfilms Order No. 8125444

An otherwise unknown relationship between cerebral hemispheric activity, as exhibited by the EEG, and the autonomic nervous system as exhibited by the nasal cycle and its self-induced alteration as regulated by forced uninostril respiration is demonstrated. It is proposed that the correlation of the nasal cycle with alternating relative EEG amplitude asymmetry is indicative of and consistent with a single ultradian ocillator system. It is also proposed that the nasal cycle is controlled via a central mechanism, whereby the hypothalamus regulates the sympathetic/parasympathetic balance and the vasomotor tone throughout the body. The 'feedback' effect of nasal airflow on EEG asymmetry is mediated through the olfactory system and its connecting pathways to the hypothalamus. The data demonstrate the individual's ability to noninvasively and predictably alter cortical activity and possibly other autonomic functions. Dissert. Abstr.

**THE ROLE OF INTESTINAL NERVES IN THE NUTRIENT INDUCED INTESTINAL HYPEREMIA Ph.D. Thesis**
Richard Arlan Nyhof 1981 124 p
Avail: Univ. Microfilms Order No. 8126536

The blood flow to the small intestine increases following a meal, and this hyperemia appears to be localized to those portions of the intestine exposed to nutrients. Evidence indicates that local intestinal nerves may participate in producing this hyperemia. The venous outflow of isolated canine jejunal segments, the arteriovenous oxygen difference, and the rate of oxygen consumption were measured before and after administration of a local anesthetic and several neurotransmitter antagonists. Intestinal nerves do not appear to play a role in the intestinal hyperemia produced by luminal placement of nutrient solutions. On the basis of the magnitude of hyperemic and metabolic responses, the hyperemia produced by glucose appears to be metabolically mediated. The oleic acid induced hyperemia more closely resembles that produced by vasodilator chemicals. The hyperemia produced by food would likely involve a combination of these mechanisms. Dissert. Abstr.

**REGULATION OF CALCIUM CURRENT AND CALCIUM ACTIVITY IN HEART CELLS Ph.D. Thesis**
Eduardo Marban 1981 152 p
Avail: Univ. Microfilms Order No. 8125689

The regulation of calcium current in mammalian ventricular muscle and Purkinje fibers was studied by voltage clamp technique. The effects of changes in intracellular calcium on the size of the slow inward calcium current (I sub si) were found to explain the digitalis-induced increase in this current, as well as some properties of the inactivation of I sub si. The involvement of K+ as a charge carrier of the transient outward current is shown Ca entry leads to inactivation, as previously suggested for Paramecium, Aplysia neurons, and stick insect skeletal muscle. Enhancement of I sub si is observed in association with the positive inotropic effect of digitalis. It is suggested that a rise in Na sub I leads to increased I sub si possibly through a secondary rise in Ca. Quiescent ventricular muscle, a mean free Ca2+ concentration of micro is found. During contractures, transients rising up to 10 micro are reported. In studying the effects of catecholamines on free Ca2+ and force, it is evidenced that epinephrine reduces myofibrillar Ca2+ sensitivity in heart muscle. Dissert. Abstr.

**AN EVALUATION OF HELICOPTER NOISE AND VIBRATION RIDE QUALITIES CRITERIA**
C. E. Hammond, D. D. Hollenbaugh, S. A. Clevenson, and J. D. Leatherwood Dec. 1981 14 p refs Presented at the Technol. for the Jet Smooth Ride, A Natl. Specialists' Meeting on Helicopter Vibration, Hartford, Conn., 2-4 Nov. 1981; sponsored by the American Helicopter Society Prepared in cooperation with Army Research and Technology Lab., Fort Eustis, Va.
(NASA-TM-83251) Avail: NTIS HC A02/MF A01 CSCL 05H

Two methods of quantifying helicopter ride quality; absorbed power for vibration only and the NASA ride comfort model for both noise and vibration are discussed. Noise and vibration measurements were obtained on five operational US Army helicopters. The data were converted to both absorbed power and DISC's (discomfort units used in the NASA model) for specific helicopter flight conditions. Both models indicate considerable variation in ride quality between the five helicopters and between flight conditions within each helicopter. T.M.

**DEVELOPMENT OF THE AUTOMATED PERFORMANCE ASSESSMENT AND REMEDIAL TRAINING SYSTEM (APARTS): A LANDING SIGNAL OFFICER TRAINING AID Final Report, Sep. 1979 - Mar. 1981**
Steven T. Breidenbach and Clyde A. Brictson Orlando, Fla. Naval Training Equipment Center Jun. 1981 53 p refs
(Contract N61339-79-D-0105)
(AD-A106224; NAVTRAEQUIPC-79-D-0105-1) Avail: NTIS HC A04/MF A01 CSCL 05/9

**N82-17874**

Development of the automated performance assessment and remedial training system (APARTS) is described. The APARTS is an automated training aid designed to assist the landing signal officer (LSO) in training pilots during the acquisition of carrier landing skills. The APARTS is based on general principles of learning and provides graphic displays of pilot landing technique problems for LSO evaluation and pilot feedback. The APARTS also integrates field carrier landing practice, conducted in the aircraft, with night carrier landing training (NCLT) instruction. Once landing problems are identified and feedback is provided to the pilot, remedial instruction is given in the NCLT. An improved APARTS conceptual model along with two computer programs designed to process, store and graphically display pilot performance data are described. Future APARTS developments are outlined for improved carrier landing effectiveness. GRA

### TIME DOMAIN IDENTIFICATION OF AN OPTIMAL CONTROL PILOT MODEL WITH EMPHASIS ON THE OBJECTIVE FUNCTION

David K. Schmidt 1982 22 p refs Presented at AFFTC/NASA Dryden/AIAA Workshop on Flight Testing to Identify Pilot Workload and Pilot Dynamics, Edwards, Calif., 19-21 Jan. 1981 (Grant NAG4-1)

(NASA-CR-168487) Avail: NTIS HC A02/MF A01 CSCL 05H

A method for the identification of the pilot's control compensation using time domain techniques is proposed. From this information we hope to infer a quadratic cost function, supported by the data, that represents a reasonable expression for the pilot's control objective in the task being performed, or an inferred piloting strategy. The objectives for this method are: (1) obtain a better understanding of the fundamental piloting techniques in complex tasks, such as landing approach; (2) the development of a metric measuurable in simulations and flight test that correlate with subjective pilot opinion; and (3) to further validate pilot models and pilot vehicle analysis methods. E.A.K.

### HUMAN-MACHINE INTERFACE ISSUES IN THE MULTI-SATELLITE OPERATIONS CONTROL CENTER-1 (MSOCC-1) Technical Memorandum, 1 Jun. - 7 Aug. 1981

Christine M. Mitchell (George Mason Univ.) Aug. 1981 68 p refs

(NASA-TM-83826) Avail: NTIS HC A04/MF A01 CSCL 05H

An analysis of the Multisatellite Operations Control Center facilities (MSOCC-1) is presented. The analysis focuses on the human machine interfaces and interactions present in the data operations control area, the computer support operations, and the mission operations rooms in both current facilities and the proposed automated MSOCC-1. An alternative approach to the design of the automated MSOCC-1, which highlights human factors and human machine interaction dimensions of the design process, is also presented. S.L.

### DOT/FAA HUMAN FACTORS WORKSHOP ON AVIATION. TRANSCRIPT, VOLUME 2

25 Nov. 1980 219 p refs Workshop held at Cambridge, Mass., 24-25 Nov. 1980

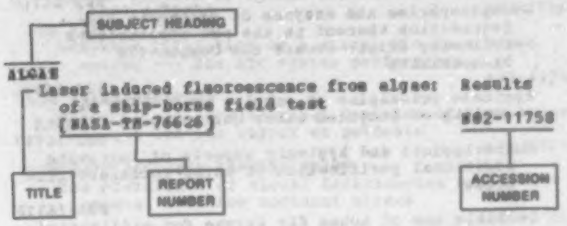
(AD-A107803) Avail: NTIS HC A10/MF A01 CSCL 01/2

Training issues and flight fatigue are considered in a presentation of aviation human factors safety issues. Human behavior is considered in the design, operation, and maintenance of aviation man machine systems. GRA

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY**/*A Continuing Bibliography (Suppl. 232)* **MAY 1982**

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

ABILITIES
  Ability differences and cognitive mapping skill [AD-A106389] N82-16761
ABIOGENESIS
  New data on abiogenic synthesis of prebiological compounds in volcanic processes A82-20017
  A theory of the origin of life A82-20023
  A neutral theory of biogenesis A82-20024
  Comets and the origin of life - Bibliography A82-20871
  Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980 A82-20901
  Abiotic organic synthesis in space A82-20910
  Far UV photolysis of methane-water gaseous mixtures and the prebiotic synthesis of aldehydes A82-20913
  Chemical evolution and plate tectonics A82-20918
  Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis A82-20920
  Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model' A82-20923
  Synthesis and degradation of amino acids by contact glow discharge electrolysis, a possible route for prebiotic formation of bio-organic compounds A82-20924
  Genesis of amino acids in the primeval sea - Formation of amino acids from sugars and ammonia in a modified sea medium A82-20925
  Porphyrin-like compounds genesis under simulated abiotic conditions A82-20926
  Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation A82-20938
  Primitive transfer RNA and origin of Darwinian system A82-20959
  Possible impact of cosmochemistry on terrestrial biology - Historical introduction A82-21987
  Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems A82-21988
  Problems in the rate of evolution in biological systems A82-21989
ACCELERATION (PHYSICS)
  Acceleration measures and motion sickness incidence [AD-A107996] N82-16734
ACCELERATION STRESSES (PHYSIOLOGY)
  Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering A82-21683
  Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
  Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730
ACCELERATION TOLERANCE
  Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit A82-21681
  The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey A82-21682
  Acceleration measures and motion sickness incidence [AD-A107996] N82-16734
  Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes N82-17820
ACCLIMATIZATION
  Laws governing readaptation for seamen after a low-latitude cruise A82-20310
ACIDS
  Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA) [AD-A107574] N82-17840
ACOUSTIC FATIGUE
  Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise A82-21769
ACOUSTIC VELOCITY
  Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels N82-17856
ACTIVATION ENERGY
  The temperature dependence of the kinetics of isometric myocardium relaxation A82-19748
ACTIVITY (BIOLOGY)
  The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress A82-21713
  Activation of succinate dehydrogenation in rat liver by noradrenalin, cAMP and acute cooling A82-21734
  An investigation of the biological activity of chalones separated from normal livers and from livers that are being regenerated A82-21742
ACTIVITY CYCLES (BIOLOGY)
  Cerebral hemispheric activity and autonomic nervous function N82-17868

**ACYLATION**

Quantum mechanical conformational analysis of aminoacyladenylates - Implication in the origin of life
A82-20941

Selective acylability of amino acids by non-enzymic model reactions of biochemical transacylations
A82-20965

**ADAPTATION**

Psychological problems in the mutual adaptation of man and machine in control systems --- Russian book
A82-19000

Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress
A82-20322

A82-21822

ATMOSPHERIC CHEMISTRY
Comets and the photochemistry of the paleoatmosphere
A82-20866

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter
A82-20914

Possible role of phosphine in chemical evolution
A82-20915

ATMOSPHERIC MODELS
Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model'
A82-20923

ATMOSPHERIC TEMPERATURE
Certain features of cerebral hemodynamics in doing mental work at different air temperatures
A82-21759

ATROPHY
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites
N82-17835

ATTENTION
Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance
A82-19225

ATTITUDE (INCLINATION)
Phenomena of fluctuation of human reaction to antiorthostatic position
N82-16721

AUDIO FREQUENCIES
Peculiarities of the middle ear structure in rodents as an index of the frequency tuning of their auditory system
A82-21714

AUDIOLOGY
Characteristics of the structure and functions of the middle ear of lizards
A82-21823

AUDIOMETRY
Poststimulatory auditory adaptation in humans according to computer audiometry
A82-21791

Methods for diagnosing hearing loss in workers exposed to high noise levels in accordance with state standards
A82-21793

Hygienic standards for industrial noise
A82-21794

Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

AUDITORY DEFECTS
The functional condition of the ampullar apparatus in Meniere's disease
A82-20308

Methods for diagnosing hearing loss in workers exposed to high noise levels in accordance with state standards
A82-21793

AUDITORY PERCEPTION
Functional model of the ccnversion of stationary signals in the auditory analyzer
A82-21703

Peculiarities of the middle ear structure in rodents as an index of the frequency tuning of their auditory system
A82-21714

Auditory depth perception - Localization of nonmoving and moving sound sources
A82-21727

Cochlear analysis of sound intensity and some mechanisms of auditory sensations
A82-21792

Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults
N82-17857

Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860

Human auditory brainstem electric responses to binaural and monaural stimuli
N82-17861

AUDITORY SIGNALS
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860

AUDITORY STIMULI
Vestibular responses of neurons in the feline anterior suprasylvian gyrus and their interaction with responses to acoustic and facial stimuli
A82-20309

Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans
A82-20315

Poststimulatory auditory adaptation in humans according to computer audiometry
A82-21791

A study of the acoustic reflex as elicited by selected environmental noise stimuli
N82-17858

Human auditory brainstem electric responses to binaural and monaural stimuli
N82-17861

AUTOMATIC CONTROL
Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance
A82-19225

Development of an automatic data bank for managing physical education of students
A82-21816

Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826]
N82-17875

AUTOMOBILE ACCIDENTS
Review of literature and regulation relating to thoracic impact tolerance and injury criteria
[PB82-108657]
N82-16736

AUTONOMIC NERVOUS SYSTEM
The state of the vegetative functions during sleep
A82-21771

The relationship between cardiac and motor components of a conditioned reflex upon the local cooling of various zones of the cerebral cortex in cats
A82-21787

Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/
A82-21825

Cerebral hemispheric activity and autonomic nervous function
N82-17868

B

B-52 AIRCRAFT
The semi-automatic instructional system --- of B-52 weapon system trainers
A82-20539

BACTERIA
Comets - A vehicle for panspermia
A82-20868

**BALANCE**
Positions, movements and equilibrium of rats after flights aboard biosatellites
N82-16713

**BARORECEPTORS**
Summated circulatory responses of thermal and baroreflexes in humans
A82-21933

**BEHAVIOR**
The dynamics of forming a prediction system in goal-directed behavior
A82-21730
Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain
A82-21739

**BETA PARTICLES**
Asymmetrical radical formation in beta-irradiated D- and L-alanines
A82-20949

**BIBLIOGRAPHIES**
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737

**BICYCLE**
The application of bicycle ergometry to the early detection of ischemic heart disease
A82-21775

**BINAURAL HEARING**
Human auditory brainstem electric responses to binaural and monaural stimuli
N82-17861

**BIOACOUSTICS**
Auditory depth perception - Localization of nonmoving and moving sound sources
A82-21727
Features of the reaction to noise of the spinal capillaries of white rats
A82-21767
Characteristics of the structure and functions of the middle ear of lizards
A82-21823

**BIOASTRONAUTICS**
USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981
[JPRS-79849] N82-16704
Question of redistribution of blood in orthostatic position
N82-16705
Ways and means of maintaining heat balance in pilots and cosmonauts
N82-16706
Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia
N82-16707
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris
N82-16711
Simulation of some of man's movements in different gravity fields
N82-16712
Positions, movements and equilibrium of rats after flights aboard biosatellites
N82-16713
Cytokinetic evaluation of erythropoiesis during long-term orbital flights
N82-16715
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
Hygienic principles of ongoing monitoring of quality of recycled water during space flights
N82-16717
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718
Possible use of house fly larvae for utilization of organic waste in biological life-support systems
N82-16719
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae
N82-16720
Phenomena of fluctuation of human reaction to antiorthostatic position
N82-16721
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight
N82-16722

**BIOCHEMISTRY**
New data on abiogenic synthesis of prebiological compounds in volcanic processes
A82-20017
Bioenergetic characteristics of various kinds of physical loads
A82-20334
The role of analytical procedures in the formation of biochemicals from experiments simulating the chemical evolution of primeval earth
A82-20927
Chemical evolution of model systems of primeval earth periphery and thermal polymerisation of aqueous solutions of cyanides
A82-20933
The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life
A82-20936
Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution
A82-20964
Selective acylability of amino acids by non-enzymic model reactions of biochemical transacylations
A82-20965
On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies
A82-20973
Could the biochemical metabolism be different
A82-20976
Differentiation of muscles on the basis of trace-element composition
A82-21704
The dynamics of protein and nucleic acid content in rat raphe nucleus cells after total deprivation of sleep /in a rotating cylinder/ and selective deprivation of its paradoxical phase
A82-21718
The correlation between hematologic and biochemical indicators in the turtles Testudo horsfieldi
A82-21733
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz
A82-21758
The multiple forms of tyrosine aminotransferase in rat liver cells and their role in cellular homeostasis
A82-21807
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

**BIOCOMPATIBILITY**
Disturbances in biological rhythms as a result of a conflict of incompatible stimuli
A82-21720

**BIOCONTROL SYSTEMS**
The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity
A82-20320
Pulmonary shunting and its regulation
A82-21728

A histochemical investigation of the microvascular effectors regulating the supply of blood to the cerebral cortex A82-21744
A three-dimensional model for the arrangement of the vascular and tubular components of the renal osmoregulatory apparatus A82-21745

BIODYNAMICS
Functional characteristics of receptors connected with sustaining the flight of the roach Periplaneta Americana L A82-21716

BIOELECTRICITY
The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity A82-20328
Electroencephalographic correlates of the hemispheric functional asymmetry in the human brain A82-21454
The effects of emotional activation on the spatial synchronization of human brain biopotentials A82-21785
Electrode unit for testing human H reflex N82-16728
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

BIOGEOCHEMISTRY
Organic geochemistry of the Isua supracrustals A82-20961
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

BIOINSTRUMENTATION
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies A82-20893

BIOLOGICAL EFFECTS
The biological effects of low-level ionizing radiation A82-20146
Summary of a discussion on the problem of the 'biological norm' /in relation to an assessment of criteria of the harmfulness of chemical effects/ A82-21750
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz A82-21758
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation A82-22200
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981 [JPRS-79346] N82-17812
Effect of stationary magnetic field on the endocrine system N82-17814
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4 [JPRS-79780] N82-17844
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths N82-17849
Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851
Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852
Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853

BIOLOGICAL EVOLUTION
A neutral theory of biogenesis A82-20024
Could life have evolved in cometary nuclei A82-20025
Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980 A82-20853
Cometary material and the origins of life on earth A82-20867
Comets - A vehicle for panspermia A82-20868
Extreme environments - Are there any limits to life A82-20869
Comets and the origin of life - Bibliography A82-20871
Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980 A82-20901
Interstellar molecules and the origin of life A82-20902
On the origin of organic molecules in interstellar space and some of its consequences A82-20904
Comets and the origin of life A82-20905
Liquid water on a planet over cosmic periods A82-20907
Abiotic organic synthesis in space A82-20910
Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans A82-20921
Formation of energy rich phosphate in Fenton's reaction --- for prebiotic conditions A82-20922
Porphyrin-like compounds genesis under simulated abiotic conditions A82-20926
Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides A82-20928
Factors influencing the rate of non-enzymatic activation of carboxylic and amino acids by ATP A82-20929
Template-directed synthesis of oligoguanylic acids - Metal ion catalysis A82-20932
The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin A82-20934
The cold theory of the origins of life - Assumptions for the theory and experimental evidence A82-20935
Polymerization of serine guanylate in the presence of montmorillonite A82-20940
Quantum mechanical conformational analysis of aminoacyladenylates - Implication in the origin of life A82-20941
Membrane lipids and the origin of life A82-20943
Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants A82-20944
Possible selective adsorption of enantiomers by Na-montmorillonite A82-20946
A mathematical method for the enumeration of doublet codes --- in genetic coding theory A82-20953

Origin and evolution of the genetic code
A82-20955

The origin and evolution of the genetic code
A82-20956

Evolutionary processes of the genetic code
A82-20957

Summary of evidence for an anticodonic basis for the origin of the genetic code
A82-20958

Primitive transfer RNA and origin of Darwinian system
A82-20959

Organic geochemistry of the Isua supracrustals
A82-20961

Search for primitive replicative properties on early polypeptides
A82-20963

Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution
A82-20964

Experiments on transfer of organic molecular information into crystal lattice superstructures
A82-20966

Phylogenetic sequence of metabolic pathways in Precambrian cellular life
A82-20967

Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
A82-20968

The evolution of blue-greens and the origins of chloroplasts
A82-20971

Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data
A82-20972

On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies
A82-20973

Microbial life in cold saline environments
A82-20974

Mutagens and carcinogens - Occurrence and role during chemical and biological evolution
A82-20975

The physical activity of humans as a social and biological problem
A82-21760

Problems in the rate of evolution in biological systems
A82-21989

BIOLOGICAL MODELS (MATHEMATICS)

EEG description algorithm for use in clinical practice and studies of work capacity
A82-20304

Models of a functional lapse in one hemisphere and of the neuropharmacological effects on the deep structures of the brain
A82-20325

The use of linear models for EEG analysis
A82-20326

The myenteric plexus - Basic principles of modeling neuronal organization
A82-20337

Competition, coexistence and irreversibility in models of early molecular evolution
A82-20951

The origin and evolution of the genetic code
A82-20956

A mathematical model of cell populations with stem cells
A82-21702

The relationship between carbohydrate and lipid metabolisms in muscle cell energetics under the influence of ATPase loading - Mathematical model
A82-21706

The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension
A82-21709

The mathematics of immunity --- response to viral intrusion
A82-21824

A computational model for expiratory flow
A82-21929

Simulation of some of man's movements in different gravity fields
N82-16712

BIOLOGY

Flow visualization techniques in medical and biological applications
A82-20778

BIOMEDICAL DATA

Computer-aided analysis of the effect of the initial narcosis on the central hemodynamics
A82-21797

Status of space biomedical programs
N82-17239

BIOMETRICS

The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method
A82-20318

BIONICS

Biped walking - Model problems of dynamics and control
A82-18977

Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
A82-20968

BIOPHYSICS

Bioenergetic characteristics of various kinds of physical loads
A82-20334

Cellular mechanisms of the Frank-Starling phenomenon
A82-21456

Functional model of the conversion of stationary signals in the auditory analyzer
A82-21703

BIOSPHERE

Are comets connected to the origin of life
A82-20865

BIOSYNTHESIS

Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides
A82-20928

Factors influencing the rate of non-enzymatic activation of carboxylic and amino acids by ATP
A82-20929

Template-directed synthesis of oligoguanylic acids - Metal ion catalysis
A82-20932

Origin and evolution of the genetic code
A82-20955

On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies
A82-20973

Rat amino acid composition after flight aboard Cosmos-1129 biosatellite
N82-17831

BLOOD CIRCULATION

Changes in microcirculatory flow with respiratory insufficiency
A82-20323

Microcirculation, tolerance to physical strain, and certain homeostasis parameters in patients with angina pectoris
A82-20324

Features of the reaction to noise of the spinal capillaries of white rats
A82-21767

Question of redistribution of blood in orthostatic position
N82-16705

Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia
N82-16707

Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight
N82-16722

BLOOD COAGULATION

The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions
A82-21799

Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836
Studies on structure and function relationship in fibrinogen N82-17059

**BLOOD FLOW**
Changes of the aggregation and orientation structure of blood in pulsating flow A82-20333
Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit A82-21661
In vivo recording of blood velocity profiles and studies in vitro of profile alterations induced by known stenoses [PB81-244139] N82-16736
The role of intestinal nerves in the nutrient induced intestinal hyperemia N82-17069

**BLOOD PLASMA**
The effects of daily blood sampling on creatine phosphokinase, aspartate aminotransferase and alanine aminotransferase activities in the blood serum of the monkey A82-21811
Blood serum nuclease activity in healthy persons and patients with various hematological diseases A82-21813

**BLOOD PRESSURE**
Parameters of the interaction of bradykinin with cardiovascular system receptors A82-20332
The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension A82-21709
The effect of blood pressure in the pulmonary artery on gas exchange in functionally heterogeneous lungs A82-21730
Summated circulatory responses of thermal and baroreflexes in humans A82-21933
Jugular, right atrial pressure and cerebral hemodynamics of healthy man submitted to postural tests N82-17025
Portable medical status and treatment system [NASA-CR-167496] N82-17862
A model for essential hypertension: Metabolic studies N82-17867

**BLOOD VESSELS**
A three-dimensional model for the arrangement of the vascular and tubular components of the renal osmoregulatory apparatus A82-21745
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17035

**BLOOD VOLUME**
Effect of blood volume on sweating rate and body fluids in exercising humans A82-19495
The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey A82-21662

**BLUE GREEN ALGAE**
The evolution of blue-greens and the origins of chloroplasts A82-20971

**BODY FLUIDS**
Effects of vasopressin administration on diuresis of water immersion in normal humans A82-19491
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters A82-19492
Effect of blood volume on sweating rate and body fluids in exercising humans A82-19495

**BODY KINEMATICS**
Simulation of some of man's movements in different gravity fields N82-16712
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713

**BODY TEMPERATURE**
Enhanced heat production in physically restrained rats in hypoxia A82-19496
Body temperature changes during the practice of g Tum-mo yoga A82-21213
The effect of synaptically active drugs on the hyperthermic effect of prostaglandin E2 in rats A82-21741
Effects of temperature on the duration of arousal episodes during hibernation A82-21934
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

**BONE MARROW**
The influence of some triterpenic glycosides on C-14-alanine inclusion into the bone-marrow cells of rats A82-20306
Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats A82-21725
Effects of dioxalin and oxamide on succinate and lactate dehydrogenase activities in rat liver, kidney and brain tissues and on the chromosomal apparatus of bone marrow cells A82-21778

**BONE MINERAL CONTENT**
The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/ A82-21800

**BRAIN**
The healthy and the diseased human brain --- Russian book A82-18872
Brain monoamine oxidase activity during cold adaptation and under the combined effects of cold and hyperbaric oxygenation A82-19746
Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans A82-20315
The use of linear models for EEG analysis A82-20326
Electroencephalographic correlates of the hemispheric functional asymmetry in the human brain A82-21454
The structural and functional organization of the ventrolateral nucleus of the thalamus A82-21455
Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain A82-21739
The circadian rhythm of activity of adrenergic nerve fibers in the dura mater of rats A82-21743
Effects of dioxalin and oxamide on succinate and lactate dehydrogenase activities in rat liver, kidney and brain tissues and on the chromosomal apparatus of bone marrow cells A82-21778
The effects of emotional activation on the spatial synchronization of human brain biopotentials A82-21785
The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress A82-21808
Temperature dependence of alanine and aspartate aminotransferase activities in rat brain during hypothermia of various durations and adrenalectomy A82-21812
Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

BRAIN CIRCULATION
  Models of a functional lapse in one hemisphere and of the neuropharmacological effects on the deep structures of the brain A82-20325
  Respiration of brain synaptosomes under conditions of depolarization in rats deprived of paradoxal sleep A82-20336
  Changes in the main characteristics of the central hemodynamics of healthy individuals and hypertension patients during physical exercise A82-21711
  The effect of low temperature on the activity and substrate specificity of monoamine oxidases in rat brain mitochondria A82-21735
  A histochemical investigation of the microvascular effectors regulating the supply of blood to the cerebral cortex A82-21744
  Echoencephalographic indices in patients with hypertensive disease under the effect of functional loads A82-21753
  Phasic energy analysis of rheoencephalograms in the detection of the decompensation of cerebral hemodynamics A82-21754
  Certain features of cerebral hemodynamics in doing mental work at different air temperatures A82-21759
  Effects of pyrroxane and methylapogalantamine on cerebral blood circulation and oxygen regime A82-21776
BRAIN DAMAGE
  The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity A82-20328
  Trial on the use of stabilography in the medical supervision of boxers A82-21817
BRAIN STEM
  Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860
  Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
BREATHING
  Phase V of the single-breath washout test A82-21928
  Pulmonary gas exchange during altered density gas breathing A82-21935
BRONCHI
  An asymmetrical model of the airways of the dog lung A82-21926
BUBBLES
  Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism A82-21717
BUTYRIC ACID
  Activation of the metabolism of the gamma-aminobutyric acid system in the cerebral hemispheres under various types of stress A82-21746
  The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress A82-21800
BYPASSES
  Pulmonary shunting and its regulation A82-21720

C

CADMIUM
  Mechanisms of cadmium absorption in rats [PB82-108184] N82-16703
CALCIUM
  Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810
CALCIUM METABOLISM
  The temperature dependence of the kinetics of isometric myocardium relaxation A82-19748
  Effect of calcium on the temporal characteristics of muscle contraction A82-21708
  Mechanisms for the regulation of the intracellular calcium distribution A82-21774
  In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids A82-22249
  Regulation of calcium current and calcium activity in heart cells N82-17070
CALIBRATING
  Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies A82-20893
CANCER
  Cytologic and biochemical genetic effects of chemical carcinogens [AD-A107615] N82-17864
  Comparative biochemistry and metabolism. Part 1: Carcinogenesis [AD-A107614] N82-17865
CAPILLARIES (ANATOMY)
  Features of the reaction to noise of the spinal capillaries of white rats A82-21767
CARBOHYDRATE METABOLISM
  Some indicators of carbohydrate metabolism in rat lung during repeated and chronic hypoxia A82-20302
  Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots A82-21457
  The relationship between carbohydrate and lipid metabolisms in muscle cell energetics under the influence of ATPase loading - Mathematical model A82-21706
  Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats A82-21725
  Activity of some enzymes of carbohydrate metabolism in rat skeletal muscles after space flight N82-17834
  Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
CARBON
  Amino acids derivatives synthesis from nitrogen, carbon and water by electric discharges A82-20010
CARBON COMPOUNDS
  Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres A82-20016
  Evolution of the terrestrial atmosphere and its fossils in biosystems A82-20960
  Experiments on transfer of organic molecular information into crystal lattice superstructures A82-20966
CARBON DIOXIDE
  Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis A82-20920
  The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/ A82-21800
  Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720
CARBON DIOXIDE CONCENTRATION
  Breath-by-breath measurement of true alveolar gas exchange A82-19498

CARBON DIOXIDE TENSION
The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747
The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method
A82-20318
CARBON ISOTOPES
Comets and the origin of life - The stable isotope approach
A82-20864
CARBON MONOXIDE
Rate of uptake of carbon monoxide at different inspired concentrations in humans
A82-21930
CARBON MONOXIDE POISONING
Health effects of carbon monoxide and ozone [PB82-114265]
N82-17866
CARBON 14
The influence of some triterpenic glycosides on C-14-alanine inclusion into the bone-marrow cells of rats
A82-20306
The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/
A82-21000
CARBONACEOUS CHONDRITES
Organic analysis of the Antarctic carbonaceous chondrites
A82-20908
CARBONACEOUS MATERIALS
Could the biochemical metabolism be different
A82-20976
CARBONACEOUS METEORITES
Nitrogen compounds in carbonaceous meteorites - A reassessment
A82-20905
CARBOXYL GROUP
Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation
A82-20938
CARBOXYLIC ACIDS
Factors influencing the rate of non-enzymatic activation of carboxylic and amino acids by ATP
A82-20929
CARCINOGENS
The biological effects of low-level ionizing radiation
A82-20146
Mutagens and carcinogens - Occurrence and role during chemical and biological evolution
A82-20975
Cytologic and biochemical genetic effects of chemical carcinogens [AD-A107615]
N82-17864
Comparative biochemistry and metabolism. Part 1: Carcinogenesis [AD-A107614]
N82-17865
CARDIAC AURICLES
Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia
A82-19497
CARDIAC VENTRICLES
Regulation of calcium current and calcium activity in heart cells
N82-17870
CARDIOGRAPHY
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation
N82-17820
CARDIOLOGY
The dynamics of heart rate recovery following work of various aerobic intensities
A82-21815
CARDIOVASCULAR SYSTEM
Parameters of the interaction of bradykinin with cardiovascular system receptors
A82-20332
Cardiovascular origins of heatstroke pathophysiology - An anesthetized rat model
A82-21687
Investigation and evaluation of cardiac arrhythmias in healthy young persons
A82-21710
The state of the vegetative functions during sleep
A82-21771
Emotional stress as a factor in cardiovascular disorders
A82-21796
Evaluation of the functional state of the cardiovascular system in patients with ischemic heart disease with reference to the nature of their occupational activity
A82-21803
Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/
A82-21825
Summated circulatory responses of thermal and baroreflexes in humans
A82-21933
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight
N82-16722
Cardiac output and cardiac cycle phase structure of pilots during flights
N82-17821
Effects of ambient parameters on man
N82-17826
Age related distinctions of cosmonauts regional hemodynamics
N82-17829
CASTS
The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey
A82-21682
CATABOLISM
Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise
A82-21927
CATALYSIS
Template-directed synthesis of oligoguanylic acids - Metal ion catalysis
A82-20932
On the polycondensation of amino acid adenylates on montmorillonites
A82-20939
Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution
A82-20964
CATALYTIC ACTIVITY
Clays as prebiotic photocatalysts
A82-20916
Template-directed synthesis of oligoguanylic acids - Metal ion catalysis
A82-20932
Terrestrial evolution of polymerization of amino acids - Heat to ATP
A82-20937
Polymerization of serine guanylate in the presence of montmorillonite
A82-20940
Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments
A82-20952
Experiments on transfer of organic molecular information into crystal lattice superstructures
A82-20966
CATECHOLAMINES
Activation of succinate dehydrogenation in rat liver by noradrenalin, CAMP and acute cooling
A82-21734
Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain
A82-21739
CATIONS
Mechanisms for the regulation of the intracellular calcium distribution
A82-21774
CATS
Condition of meningeal nervous system during repeated exposure to transverse accelerations
N82-16730
CELL DIVISION
A mathematical model of cell populations with stem cells
A82-21702
An electron microscope study of hyperplasia in fibers of the skeletal muscles of athletes
A82-21764

The source of reparative regeneration in skeletal muscle tissue
A82-21768

Approaches to the removal of G2-chalone from the liver of rats
A82-21810

CELLS (BIOLOGY)

The influence of some triterpenic glycosides on C-14-alanine inclusion into the bone-marrow cells of rats
A82-20306

Phylogenetic sequence of metabolic pathways in Precambrian cellular life
A82-20967

DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria
A82-20970

On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies
A82-20973

Cellular mechanisms of the Frank-Starling phenomenon
A82-21456

Changes in the structure and cellular composition of the inguinal lymph nodes of white rats subjected to static and dynamic stresses
A82-21761

Cellular and molecular bases of local immunity
A82-21773

Mechanisms for the regulation of the intracellular calcium distribution
A82-21774

The existence of an endogenous biorhythm in chromatin-positive cells of the buccal epithelium in women
A82-21783

The multiple forms of tyrosine aminotransferase in rat liver cells and their role in cellular homeostasis
A82-21807

A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

Some mechanisms of calcium transport by the cardiac sarcolemma
N82-17810

CENTRAL NERVOUS SYSTEM

Computer-aided analysis of the effect of the initial narcosis on the central hemodynamics
A82-21797

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

CEREBRAL CORTEX

Frequency characteristics of visual evoked potentials in different regions of the human cerebral cortex
A82-20314

Models of a functional lapse in one hemisphere and of the neuropharmocological effects on the deep structures of the brain
A82-20325

A histochemical investigation of the microvascular effectors regulating the supply of blood to the cerebral cortex
A82-21744

Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise
A82-21769

The relationship between cardiac and motor components of a conditioned reflex upon the local cooling of various zones of the cerebral cortex in cats
A82-21787

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist
N82-17854

CEREBRUM

The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747

Activation of the metabolism of the gamma-aminobutyric acid system in the cerebral hemispheres under various types of stress
A82-21746

Certain features of cerebral hemodynamics in doing mental work at different air temperatures
A82-21759

Cerebral hemispheric activity and autonomic nervous function
N82-17868

CHARGE TRANSFER

Stereoselective interactions of small biological molecules
A82-20985

CHEMICAL BONDS

Clays as prebiotic photocatalysts
A82-20916

Evolving nucleotide binding surfaces
A82-20954

CHEMICAL COMPOSITION

Investigation of the otolithic membrane of the utricle of the guinea pig
A82-20301

Chemical evolution of interstellar dust - A source of prebiotic material
A82-20863

Comets and the origin of life - The stable isotope approach
A82-20864

Are comets connected to the origin of life
A82-20865

The role of analytical procedures in the formation of biochemicals from experiments simulating the chemical evolution of primeval earth
A82-20927

Approaches to the removal of G2-chalone from the liver of rats
A82-21810

Chemicals Identified in Human Biological Media
[DE81-030813] N82-16735

CHEMICAL COMPOUNDS

Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864

CHEMICAL EFFECTS

Summary of a discussion on the problem of the 'biological norm' /in relation to an assessment of criteria of the harmfulness of chemical effects/
A82-21750

CHEMICAL EVOLUTION

A model for the enantiomeric enrichment of polypeptides on the primitive earth
A82-20020

Search for effect of longitudinally polarized protons on optically active amino acids
A82-20021

A neutral theory of biogenesis
A82-20024

Could life have evolved in cometary nuclei
A82-20025

Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980
A82-20853

Chemical evolution of interstellar dust - A source of prebiotic material
A82-20863

Comets and the origin of life - The stable isotope approach
A82-20864

Are comets connected to the origin of life
A82-20865

Cometary material and the origins of life on earth
A82-20867

Comets and the origin of life - Bibliography
A82-20871

On the origin of organic molecules in interstellar space and some of its consequences
A82-20904

Comets and the origin of life
A82-20905

Nature and origin of organic molecules in comets
A82-20906

Organic analysis of the Antarctic carbonaceous chondrites
A82-20908

Nitrogen compounds in carbonaceous meteorites - A reassessment
A82-20909

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges
A82-20912

Far UV photolysis of methane-water gaseous mixtures and the prebiotic synthesis of aldehydes
A82-20913

Possible role of phosphine in chemical evolution
A82-20915

Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay
A82-20917

Chemical evolution and plate tectonics
A82-20918

The Strecker synthesis in the primitive ocean --- chemical evolution
A82-20919

Formation of energy rich phosphate in Fenton's reaction --- for prebiotic conditions
A82-20922

Synthesis and degradation of amino acids by contact glow discharge electrolysis, a possible route for prebiotic formation of bio-organic compounds
A82-20924

Genesis of amino acids in the primeval sea - Formation of amino acids from sugars and ammonia in a modified sea medium
A82-20925

The role of analytical procedures in the formation of biochemicals from experiments simulating the chemical evolution of primeval earth
A82-20927

HCN oligomerization - Isolation and preliminary characterization of a new precursor of adenine
A82-20930

Cyanamide mediated syntheses of leu, ala, and phe peptides under plausible primitive earth conditions
A82-20931

Chemical evolution of model systems of primeval earth periphery and thermal polymerisation of aqueous solutions of cyanides
A82-20933

The cold theory of the origins of life - Assumptions for the theory and experimental evidence
A82-20935

The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life
A82-20936

Terrestrial evolution of polymerization of amino acids - Heat to ATP
A82-20937

On the polycondensation of amino acid adenylates on montmorillonites
A82-20939

Environmental conditions for the formation of marigranules and kinetic studies on the formation --- chemical evolution of amino acids in sea medium
A82-20942

Membrane lipids and the origin of life
A82-20943

Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants
A82-20944

Stereoselective interactions of small biological molecules
A82-20945

Competition, coexistence and irreversibility in models of early molecular evolution
A82-20951

Evolving nucleotide binding surfaces
A82-20954

Summary of evidence for an anticodonic basis for the origin of the genetic code
A82-20958

Evolution of the terrestrial atmosphere and its fossils in biosystems
A82-20960

Secondary structures of polypeptides as evolutionary growing points
A82-20962

Search for primitive replicative properties on early polypeptides
A82-20963

Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data
A82-20972

Mutagens and carcinogens - Occurrence and role during chemical and biological evolution
A82-20975

Could the biochemical metabolism be different
A82-20976

CHEMICAL FRACTIONATION

HCN oligomerization - Isolation and preliminary characterization of a new precursor of adenine
A82-20930

The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin
A82-20934

CHEMICAL REACTIONS

Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

CHLORINE COMPOUNDS

Comparative evaluation of antimicrobial activity of some urine preservatives
N82-17830

CHLOROPHYLLS

The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2
N82-17811

CHLOROPLASTS

The evolution of blue-greens and the origins of chloroplasts
A82-20973

CHOLINE

The effect of cholinomimetics on the development of hypothermia
A82-21781

CHOLINERGICS

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

CHROMATOGRAPHY

A model for essential hypertension: Metabolic studies
N82-17867

CHROMOSOMES

Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

CIRCADIAN RHYTHMS

The circadian rhythm of activity of adrenergic nerve fibers in the dura mater of rats
A82-21743

Dynamics of the condition of granulation tissue after injuries sustained at different times of the day
A82-21763

The existence of an endogenous biorhythm in chromatin-positive cells of the buccal epithelium in women
A82-21783

Comparative study of several physiological parameters in the evaluation of functional condition in nurses
A82-21826

CIVIL AVIATION

Effects of relative metabolic rate and heart rate variation on the performance of flight attendants
A82-21680

Causes of fatigue among crews of civil aviation helicopters
N82-16708

CLAYS

Clays as prebiotic photocatalysts
A82-20916

Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay
A82-20917

Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments
A82-20952

**CLINICAL MEDICINE**
- EEG description algorithm for use in clinical practice and studies of work capacity A82-20304
- The functional condition of the ampullar apparatus in Meniere's disease A82-20308
- Deontology in the practice of otorhinolaryngology A82-20312
- Special and clinical physiology of hypoxic states A82-20317
- Elevation of hypoxia resistance with the use of gutimine A82-20319
- Some indicators of protein metabolism in erythrocytes during radiation sickness and following cystamine injection A82-21724
- Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness A82-21755
- Mechanisms of compensation and adaptation in relation to the hyperfunction of the heart A82-21756
- The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions A82-21799
- Predicting the potentials of young swimmers based on clinical and physiological data A82-21814

**COAGULATION**
- Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy [MBB-UA-581-81-O] N82-17843

**COAXIAL CABLES**
- Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I A82-20891
- Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results A82-20892

**COCHLEA**
- Cochlear analysis of sound intensity and some mechanisms of auditory sensations A82-21792

**COCKPITS**
- Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

**COCKROACHES**
- Functional characteristics of receptors connected with sustaining the flight of the roach Periplaneta Americana L A82-21716

**COGNITION**
- An analysis of cognitive mapping skill [AD-A106145] N82-16740

**COLD ACCLIMATIZATION**
- Glycogen and nonspecific adaptation to cold A82-19494
- Brain monoamine oxidase activity during cold adaptation and under the combined effects of cold and hyperbaric oxygenation A82-19746
- The influence of muscular work on the vestigial effects of cold acclimation A82-19749
- Microbial life in cold saline environments A82-20974
- The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver A82-21732
- Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold A82-21736
- Lysosomes under conditions of stress A82-21770
- LDH isoenzyme spectrum in intact and denervated skeletal muscles of rats of various age during cold adaptation A82-21798

**COLD PLASMAS**
- The cold theory of the origins of life - Assumptions for the theory and experimental evidence A82-20935
- The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life A82-20936

**COLD TOLERANCE**
- Adaptation to high-altitude hypoxia at different ambient temperatures /before and during adaptation/ A82-21715

**COLLAGENS**
- Dynamics of the condition of granulation tissue after injuries sustained at different times of the day A82-21763

**COLOR VISION**
- Psychophysical evidence for more than two kinds of cone in dichromatic color blindness A82-19608

**COMBAT**
- Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering A82-21683

**COMET NUCLEI**
- Could life have evolved in cometary nuclei A82-20025
- Nature and origin of organic molecules in comets A82-20906

**COMETS**
- Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980 A82-20853
- Comets and the origin of life - The stable isotope approach A82-20864
- Are comets connected to the origin of life A82-20865
- Comets and the photochemistry of the paleoatmosphere A82-20866
- Cometary material and the origins of life on earth A82-20867
- Comets - A vehicle for panspermia A82-20868
- Extreme environments - Are there any limits to life A82-20869
- Comets and the origin of life - Bibliography A82-20871
- Comets and the origin of life A82-20905

**COMFORT**
- An evaluation of helicopter noise and vibration ride qualities criteria [NASA-TM-83251] N82-17871

**COMPUTATIONAL FLUID DYNAMICS**
- A computational model for expiratory flow A82-21929

**COMPUTER ASSISTED INSTRUCTION**
- Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid [AD-A106224] N82-17873

**COMPUTER TECHNIQUES**
- Microelectronics and computers in medicine A82-21260
- Poststimulatory auditory adaptation in humans according to computer audiometry A82-21791
- Computer-aided analysis of the effect of the initial narcosis on the central hemodynamics A82-21797

**COMPUTERIZED SIMULATION**
- Computer simulation as a visual aid in a video course --- for ATC system performance A82-19248
- Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design A82-19258

CONDITIONED REFLEXES
The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats A82-20305
The relationship between cardiac and motor components of a conditioned reflex upon the local cooling of various zones of the cerebral cortex in cats A82-21787
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851

CONFERENCES
Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980 A82-20853
Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980 A82-20901
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1 [AD-A107802] N82-17876
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2 [AD-A107803] N82-17877

CONTRACTION
Effect of calcium on the temporal characteristics of muscle contraction A82-21706

CONTROL SIMULATION
Computer simulation as a visual aid in a video course --- for ATC system performance A82-19246

CONTROL THEORY
Time domain identification of an optimal control pilot model with emphasis on the objective function [NASA-CR-168487] N82-17874

CORIOLIS EFFECT
Posturography of ataxia induced by Coriolis- and Purkinje-effects A82-21684

CORNEA
Differences in eye movement data recorded by electro-oculography and corneal reflection techniques A82-19224

CORONARY ARTERY DISEASE
The effects of daily blood sampling on creatine phosphokinase, aspartate aminotransferase and alanine aminotransferase activities in the blood serum of the monkey A82-21811

CORONARY CIRCULATION
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation N82-17828

COSMIC DUST
Comets and the origin of life - The stable isotope approach A82-20864

COSMOCHEMISTRY
Possible impact of cosmochemistry on terrestrial biology - Historical introduction A82-21987

COSMONAUTS
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

COSMOS SATELLITES
Status of space biomedical programs N82-17239

CRASHES
Review of literature and regulation relating to thoracic impact tolerance and injury criteria [PB82-108697] N82-16736

CREATINE
The effects of daily blood sampling on creatine phosphokinase, aspartate aminotransferase and alanine aminotransferase activities in the blood serum of the monkey A82-21811

CRITERIA
An evaluation of helicopter noise and vibration ride qualities criteria [NASA-TM-83251] N82-17871

CRUDE OIL
Microbiologically-mediated mutagenic activity of crude oil [PB82-105131] N82-16702

CRYSTAL LATTICES
Experiments on transfer of organic molecular information into crystal lattice superstructures A82-20966

CYANAMIDES
Cyanamide mediated syntheses of leu, ala, and phe peptides under plausible primitive earth conditions A82-20931

CYANIDES
Chemical evolution of model systems of primeval earth periphery and thermal polymerization of aqueous solutions of cyanides A82-20933

CYCLIC COMPOUNDS
Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution A82-20964

CYSTAMINE
Some indicators of protein metabolism in erythrocytes during radiation sickness and following cystamine injection A82-21724

CYTOCHROMES
The evolution of blue-greens and the origins of chloroplasts A82-20971
The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver A82-21732
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

CYTOGENESIS
Changes in morphological and cytogenetic hematopoietic indicators in hamadryas baboons exposed to chronic low-level radiation A82-21726

CYTOLOGY
The source of reparative regeneration in skeletal muscle tissue A82-21768
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice [DE81-031999] N82-16700
Cytologic and biochemical genetic effects of chemical carcinogens [AD-A107615] N82-17864

D

DATA BASES
Microelectronics and computers in medicine A82-21268
Development of an automatic data bank for managing physical education of students A82-21816

DATA PROCESSING
Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance A82-19225

DATA STORAGE
Development of an automatic data bank for managing physical education of students A82-21816

DECISION MAKING
Microelectronics and computers in medicine A82-21268
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements [AD-A106143] N82-16739

DECISION THEORY
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements [AD-A106143] N82-16739

DECODING
A mathematical method for the enumeration of doublet codes --- in genetic coding theory
A82-20953

DECOMPRESSION SICKNESS
Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism
A82-21717
Air embolism - Possible role of surfactant on recompression
A82-21931

DEGRADATION
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716

DEHYDRATED FOOD
Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors
N82-17816

DEHYDROGENATION
Activation of succinate dehydrogenation in rat liver by noradrenalin, cAMP and acute cooling
A82-21734

DEOXYRIBONUCLEIC ACID
DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria
A82-20970
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation
A82-22200
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864

DEPOLARIZATION
Respiration of brain synaptosomes under conditions of depolarization in rats deprived of paradoxal sleep
A82-20336

DESERTS
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

DIAGNOSIS
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732

DIETS
In-flight diets and quantitative adequacy thereof to pilot expenditure
N82-17813

DIFFUSION
Facilitated diffusion of small non-electrolytes in the human red blood cell
N82-17855

DIGITAL COMPUTERS
Microelectronics and computers in medicine
A82-21268

DIGITAL SIMULATION
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

DIGITALIS
Regulation of calcium current and calcium activity in heart cells
N82-17870

DISEASES
The functional condition of the ampullar apparatus in Meniere's disease
A82-20308

DISPLAY DEVICES
Visual technology and the future --- for flight simulators
A82-20538
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

DIURESIS
Effects of vasopressin administration on diuresis of water immersion in normal humans
A82-19491
The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension
A82-21712

DIURETICS
Effects of vasopressin administration on diuresis of water immersion in normal humans
A82-19491

DRUGS
The effect of piracetam on the body's resistance to hypoxia
A82-21777
The effect of the prolonged administration of sodium hydroxybutyrate on the physical work capacity and muscle tissue state of rats
A82-21779
Chemicals Identified in Human Biological Media
[DE81-030813] N82-16735

DYNAMIC CHARACTERISTICS
The dynamics of forming a prediction system in goal-directed behavior
A82-21730

DYNAMIC CONTROL
Biped walking - Model problems of dynamics and control
A82-18977
Development of an integrated walking robot
A82-18988

DYNAMIC RESPONSE
In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids
A82-22249

DYNAMIC STABILITY
Development of an integrated walking robot
A82-18988

E

EAR
The functional condition of the ampullar apparatus in Meniere's disease
A82-20308
A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

EARDRUMS
Characteristics of the structure and functions of the middle ear of lizards
A82-21823

EATING
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

ECHOENCEPHALOGRAPHY
Echoencephalographic indices in patients with hypertensive disease under the effect of functional loads
A82-21753

ECOSYSTEMS
Introduction prognosis and its methodological aspects --- plant growth in new habitats
A82-21722

EDUCATION
The physical activity of humans as a social and biological problem
A82-21760
Development of an automatic data bank for managing physical education of students
A82-21816
Rationalizing physical regimen of sedentary workers
A82-21818

EFFERENT NERVOUS SYSTEMS
The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats
A82-20305
A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts
A82-21729
The relationship between cardiac and motor components of a conditioned reflex upon the local cooling of various zones of the cerebral cortex in cats
A82-21787

ELECTRIC DISCHARGES
Amino acids derivatives synthesis from nitrogen, carbon and water by electric discharges
A82-20018
Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges
A82-20912

ELECTRIC FIELDS
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies A82-20893
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature [PB82-102567] N82-16737

ELECTRIC POTENTIAL
Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering A82-21683

ELECTRIC POWER TRANSMISSION
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845

ELECTRIC STIMULI
Acute experimental emotional stress in rabbits in a modulated electromagnetic field A82-20307
Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/ A82-21825

ELECTRIC WIRE
The thermal response of a human in the near-zone of a resonant thin-wire antenna A82-22206

ELECTROCARDIOGRAPHY
Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering A82-21683
Investigation and evaluation of cardiac arrhythmias in healthy young persons A82-21710
Portable medical status and treatment system [NASA-CR-167496] N82-17862

ELECTRODES
Electrode unit for testing human H reflex N82-16728

ELECTROENCEPHALOGRAPHY
EEG description algorithm for use in clinical practice and studies of work capacity A82-20304
Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans A82-20315
The use of linear models for EEG analysis A82-20326
Electroencephalographic correlates of the hemispheric functional asymmetry in the human brain A82-21454
EEG evaluation of mental stress A82-21784
Cerebral hemispheric activity and autonomic nervous function N82-17868

ELECTROLYSIS
Synthesis and degradation of amino acids by contact glow discharge electrolysis, a possible route for prebiotic formation of bio-organic compounds A82-20924

ELECTROLYTES
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters A82-19492

ELECTROMAGNETIC FIELDS
Acute experimental emotional stress in rabbits in a modulated electromagnetic field A82-20307
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz A82-21758

ELECTROMAGNETIC MEASUREMENT
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I A82-20891
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results A82-20892

ELECTROMAGNETIC RADIATION
USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4 [JPRS-79760] N82-17844
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths N82-17849
Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851
Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852
Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853

ELECTROMYOGRAPHY
Study of the electrical activity of the extraocular muscles A82-21731

ELECTRON MICROSCOPES
An electron microscope study of hyperplasia in fibers of the skeletal muscles of athletes A82-21764

ELECTRONYSTAGMOGRAPHY
Differences in eye movement data recorded by electro-oculography and corneal reflection techniques A82-19224

EMERGENCIES
First aid for thorax traumas: Thorax drainage through suction - Report on 25 cases A82-19016

EMOTIONAL FACTORS
Acute experimental emotional stress in rabbits in a modulated electromagnetic field A82-20307
Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress A82-20322
Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress A82-20335
The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress A82-21713
Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain A82-21739
Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia A82-21780
The effects of emotional activation on the spatial synchronization of human brain biopotentials A82-21785
Emotional stress as a factor in cardiovascular disorders A82-21796
The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress A82-21808

EMOTIONS
Emotions, sleep, and health A82-21804

ENDOCRINE SECRETIONS
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters A82-19492

ENDOCRINE SYSTEMS
  Effect of stationary magnetic field on the endocrine system
  N82-17814
ENDOSCOPES
  Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
  [MBB-UA-581-81-0]
  N82-17843
ENDOTHELIUM
  The ultrastructure of the liver sinusoids of mice under conditions of acute stress - Morphometric study
  A82-21782
ENERGY REQUIREMENTS
  Characteristics and patterns of the individual development of male and female rats in the light of the energy rule of skeletal muscles
  A82-21721
ENERGY TRANSFER
  Bioenergetic characteristics of various kinds of physical loads
  A82-20334
ENUMERATION
  A mathematical method for the enumeration of doublet codes --- in genetic coding theory
  A82-20953
ENVIRONMENT MODELS
  Cyanamide mediated syntheses of leu, ala, and phe peptides under plausible primitive earth conditions
  A82-20931
ENVIRONMENT SIMULATION
  Chemical evolution of model systems of primeval earth periphery and thermal polymerisation of aqueous solutions of cyanides
  A82-20933
  The cold theory of the origins of life - Assumptions for the theory and experimental evidence
  A82-20935
  Environmental conditions for the formation of marigranules and kinetic studies on the formation --- chemical evolution of amino acids in sea medium
  A82-20942
ENZYME ACTIVITY
  Could the biochemical metabolism be different
  A82-20976
  Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots
  A82-21457
  The relationship between carbohydrate and lipid metabolisms in muscle cell energetics under the influence of ATPase loading - Mathematical model
  A82-21706
  Lysosomes under conditions of stress
  A82-21770
  Effects of dioxalin and oxamide on succinate and lactate dehydrogenase activities in rat liver, kidney and brain tissues and on the chromosomal apparatus of bone marrow cells
  A82-21778
  The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions
  A82-21799
  The effects of daily blood sampling on creatine phosphokinase, aspartate aminotransferase and alanine aminotransferase activities in the blood serum of the monkey
  A82-21811
  Temperature dependence of alanine and aspartate aminotransferase activities in rat brain during hypothermia of various durations and adrenalectomy
  A82-21812
  Enzymatic capacities of skeletal muscle - Effects of different types of training
  A82-22248
  Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations
  N82-16714
  Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
  N82-16716
  Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
  N82-17820
  Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite
  N82-17832
  Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936
  N82-17833
  Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
  N82-17834
ENZYMES
  Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution
  A82-20964
  On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies
  A82-20973
  Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats
  A82-21725
  Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
  N82-16716
  Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
  N82-16723
  Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus
  N82-17847
  Effect of hypogeomagnetic field on activity of some cerebral enzymes
  N82-17853
ENZYMOLOGY
  LDH isoenzyme spectrum in intact and denervated skeletal muscles of rats of various age during cold adaptation
  A82-21798
EPICARDIUM
  Nucleic acid and protein metabolism in cardiac muscle
  A82-21772
EPILEPSY
  The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity
  A82-20328
EPITHELIUM
  Dynamics of the condition of granulation tissue after injuries sustained at different times of the day
  A82-21763
  The existence of an endogenous biorhythm in chromatin-positive cells of the buccal epithelium in women
  A82-21783
ERGOMETERS
  The application of bicycle ergometry to the early detection of ischemic heart disease
  A82-21775
ERYTHROCYTES
  Changes of the aggregation and orientation structure of blood in pulsating flow
  A82-20333
  Some indicators of protein metabolism in erythrocytes during radiation sickness and following cystamine injection
  A82-21724
  The correlation between hematologic and biochemical indicators in the turtles Testudo horsfieldi
  A82-21733
  Effect of low-temperature on the membrane permeability of erythrocytes reconstituted in media of different ionic composition
  A82-21737
  Erythrocyte indices during a competitive marathon
  A82-21932

Cytokinetic evaluation of erythropoiesis during long-term orbital flights
N82-16715
Effect of space flights of different duration on energy metabolism of human erythrocytes
N82-17817
Facilitated diffusion of small non-electrolytes in the human red blood cell
N82-17855

ESCHERICHIA
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation
A82-22200

ESTERS
Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model'
A82-20923

ESTIMATES
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739

EVACUATING (TRANSPORTATION)
Physical and physiological features of long-range flight and its impact on patients
A82-19012

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Frequency characteristics of visual evoked potentials in different regions of the human cerebral cortex
A82-20314
Coordination of processes in the hierarchic structure of the visual analyzer
A82-21788

EXCRETION
Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise
A82-21927
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

EXERCISE PHYSIOLOGY
Erythrocyte indices during a competitive marathon
A82-21932
Cardiac output increase and gas exchange at start of exercise
A82-21936
Enzymatic capacities of skeletal muscle - Effects of different types of training
A82-22248
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

EXOBIOLOGY
USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981
[JPRS-79849] N82-16704
Positions, movements and equilibrium of rats after flights aboard biosatellites
N82-16713
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations
N82-16714

EXPIRATION
A computational model for expiratory flow
A82-21929

EXPIRED AIR
Breath-by-breath measurement of true alveolar gas exchange
A82-19498
The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts
A82-21801

EXTRATERRESTRIAL ENVIRONMENTS
Extreme environments - Are there any limits to life
A82-20869

EXTRATERRESTRIAL LIFE
Organic analysis of the Antarctic carbonaceous chondrites
A82-20938
Possible impact of cosmochemistry on terrestrial biology - Historical introduction
A82-21987

EYE DISEASES
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732

EYE MOVEMENTS
Method of recording rotatory eye reflexes
N82-16727

F

FACE (ANATOMY)
Vestibular responses of neurons in the feline anterior suprasylvian gyrus and their interaction with responses to acoustic and facial stimuli
A82-20309
The existence of an endogenous biorhythm in chromatin-positive cells of the buccal epithelium in women
A82-21783

FAR ULTRAVIOLET RADIATION
Far UV photolysis of methane-water gaseous mixtures and the prebiotic synthesis of aldehydes
A82-20913

FATIGUE (BIOLOGY)
Certain features of cerebral hemodynamics in doing mental work at different air temperatures
A82-21759
Functional state of the hippocampal-reticular complex under submaximal physical load and fatigue
A82-21786
Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

FATTY ACIDS
Nonesterified fatty acid metabolism during exercise in humans
A82-21809
A model for essential hypertension: Metabolic studies
N82-17867

FEMALES
Comparative study of several physiological parameters in the evaluation of functional condition in nurses
A82-21826

FIBRIN
Studies on structure and function relationship in fibrinogen
N82-17859

FIBRINOGEN
The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions
A82-21799
Blood fibrinogen as related to immersion in water for seven days and short-term space flight
N82-17336
Studies on structure and function relationship in fibrinogen
N82-17859

FIBROBLASTS
Dynamics of the condition of granulation tissue after injuries sustained at different times of the day
A82-21763

FINGERS
The economy of muscular work during unfused tetanus
A82-21701
The dynamics of muscular relaxation following unfused tetanuses of different durations
A82-21707

FIRST AID
First aid for thorax traumas: Thorax drainage through suction - Report on 25 cases
A82-19016

FLIGHT
Functional characteristics of receptors connected with sustaining the flight of the roach Periplaneta Americana L
A82-21716

FLIGHT CLOTHING
Ways and means of maintaining heat balance in pilots and cosmonauts
N82-16706

FLIGHT CREWS
The reliability of flight personnel during the operation of the Mi-4 helicopter
A82-19014

Effects of relative metabolic rate and heart rate variation on the performance of flight attendants A82-21680

Causes of fatigue among crews of civil aviation helicopters N82-16708

Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

Fatigue in Flight Inspection Field Office (FIFO) flight crews [AD-A106791] N82-16733

**FLIGHT FATIGUE**

Causes of fatigue among crews of civil aviation helicopters N82-16708

Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2 [AD-A107803] N82-17877

**FLIGHT FITNESS**

A study of treadmill exercise protocols for Chinese males A82-21677

**FLIGHT HAZARDS**

Effects of long-term exposure to low levels of ozone - A review A82-21676

**FLIGHT SAFETY**

Flight simulation - The military need A82-20529

**FLIGHT SIMULATION**

Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design A82-19258

Flight simulation in the current Australian airline scene A82-20534

Visual technology and the future --- for flight simulators A82-20538

Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering A82-21683

**FLIGHT SIMULATORS**

Flight simulation - The military need A82-20529

Flight simulation in the current Australian airline scene A82-20534

The semi-automatic instructional system --- of B-52 weapon system trainers A82-20539

A program for assessing pilot mental state in flight simulators [AIAA PAPER 82-0257] A82-22078

**FLIGHT STRESS (BIOLOGY)**

The reliability of flight personnel during the operation of the Mi-4 helicopter A82-19014

Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots A82-21457

Effects of relative metabolic rate and heart rate variation on the performance of flight attendants A82-21680

Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit A82-21681

A program for assessing pilot mental state in flight simulators [AIAA PAPER 82-0257] A82-22078

Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821

**FLIGHT TRAINING**

Flight simulation - The military need A82-20529

Flight simulation in the current Australian airline scene A82-20534

Visual technology and the future --- for flight simulators A82-20538

Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid [AD-A106224] N82-17873

**FLOW DISTRIBUTION**

Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit A82-21681

**FLOW VISUALIZATION**

Flow visualization techniques in medical and biological applications A82-20776

**FLUID FLOW**

A hydrodynamic model of an outer hair cell [NASA-TM-82773] N82-16743

**FLYBY MISSIONS**

Comets and the origin of life - The stable isotope approach A82-20864

**FOOD PROCESSING**

Storage stability and improvement of intermediate moisture foods, phase 5 [NASA-CR-167503] N82-16742

**FORMALDEHYDE**

Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis A82-20920

**FOSSILS**

Evolution of the terrestrial atmosphere and its fossils in biosystems A82-20960

# G

**GAMMA RAYS**

The radiolysis and radioracemization of amino acids on silica surfaces A82-20019

Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons A82-21723

**GAS CHROMATOGRAPHY**

The radiolysis and radioracemization of amino acids on silica surfaces A82-20019

**GAS COMPOSITION**

The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts A82-21801

**GAS DENSITY**

Pulmonary gas exchange during altered density gas breathing A82-21935

**GAS EXCHANGE**

Breath-by-breath measurement of true alveolar gas exchange A82-19498

Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism A82-21717

The effect of blood pressure in the pulmonary artery on gas exchange in functionally heterogeneous lungs A82-21738

Pulmonary gas exchange during altered density gas breathing A82-21935

Cardiac output increase and gas exchange at start of exercise A82-21936

Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720

**GAS PRESSURE**
The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method
A82-20310

**GAS TRANSPORT**
Oxygen transport in dogs native to high altitudes during exercise
A82-21719

**GASEOUS DIFFUSION**
Rate of uptake of carbon monoxide at different inspired concentrations in humans
A82-21930

**GELATINS**
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742

**GENERAL AVIATION AIRCRAFT**
The prevalence of visual deficiencies among 1979 general aviation accident airmen
A82-21688

**GENETIC CODE**
Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis
A82-20022
A theory of the origin of life
A82-20023
A mathematical method for the enumeration of doublet codes --- in genetic coding theory
A82-20953
Origin and evolution of the genetic code
A82-20955
The origin and evolution of the genetic code
A82-20956
Evolutionary processes of the genetic code
A82-20957
Summary of evidence for an anticodonic basis for the origin of the genetic code
A82-20958
Evolution of the terrestrial atmosphere and its fossils in biosystems
A82-20960
Emergence of flavin catalysis - An approach based on the concept of bioorganic evolution
A82-20964

**GENETICS**
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation
A82-22200
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864

**GEOMAGNETISM**
Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan
N82-17852
Effect of hypogeomagnetic field on activity of some cerebral enzymes
N82-17853

**GLOW DISCHARGES**
Synthesis and degradation of amino acids by contact glow discharge electrolysis, a possible route for prebiotic formation of bio-organic compounds
A82-20924

**GLUCOSIDES**
The influence of some triterpenic glycosides on C-14-alanine inclusion into the bone-marrow cells of rats
A82-20306

**GLYCINE**
Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments
A82-20552

**GLYCOGENS**
Glycogen and nonspecific adaptation to cold
A82-19494
Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots
A82-21457

**GLYCOLYSIS**
Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats
A82-21725

**GOALS**
A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts
A82-21729

**GRAVIRECEPTORS**
In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids
A82-22249

**GRAVITATIONAL EFFECTS**
Simulation of some of man's movements in different gravity fields
N82-16712

**GRAVITATIONAL FIELDS**
Simulation of some of man's movements in different gravity fields
N82-16712

**GROUND BASED CONTROL**
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875

**GROWTH**
Characteristics and patterns of the individual development of male and female rats in the light of the energy rule of skeletal muscles
A82-21721

**GUANOSINES**
Template-directed synthesis of oligoguanylic acids - Metal ion catalysis
A82-20933

## H

**HABITATS**
Introduction prognosis and its methodological aspects --- plant growth in new habitats
A82-21722

**HAIR**
A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

**HALOPHILES**
DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria
A82-20970

**HAZARDS**
Methods for diagnosing hearing loss in workers exposed to high noise levels in accordance with state standards
A82-21793

**HEAD (ANATOMY)**
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets
N82-16710

**HEALTH**
Emotions, sleep, and health
A82-21804
Physical health of truck drivers in the open-pit mining industry of the far north
A82-21805

**HEALTH PHYSICS**
Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation
N82-16726

**HEARING**
Characteristics of the structure and functions of the middle ear of lizards
A82-21823

**HEART DISEASES**
A study of treadmill exercise protocols for Chinese males
A82-21677
Investigation and evaluation of cardiac arrhythmias in healthy young persons
A82-21710
The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress
A82-21713

Effect of cooling of the rhythmo-inotropic ratio
in a pathologically altered myocardium
A82-21740
Mechanisms of compensation and adaptation in
relation to the hyperfunction of the heart
A82-21756
The application of bicycle ergometry to the early
detection of ischemic heart disease
A82-21775
Emotional stress as a factor in cardiovascular
disorders
A82-21796
Seasonal rhythm of the immune reactivity and heart
tolerance to physical load in patients with
ischemic heart disease
A82-21802
Evaluation of the functional state of the
cardiovascular system in patients with ischemic
heart disease with reference to the nature of
their occupational activity
A82-21803

**HEART FUNCTION**
Mechanisms of compensation and adaptation in
relation to the hyperfunction of the heart
A82-21756
The relationship between cardiac and motor
components of a conditioned reflex upon the
local cooling of various zones of the cerebral
cortex in cats
A82-21787
Cardiac output increase and gas exchange at start
of exercise
A82-21936

**HEART RATE**
Pulse rate evaluation of the relative
physiological intensity of aerobic muscular work
A82-20331
Effects of relative metabolic rate and heart rate
variation on the performance of flight attendants
A82-21680
The dynamics of heart rate recovery following work
of various aerobic intensities
A82-21815
Fatigue in Flight Inspection Field Office (FIFO)
flight crews
[AD-A106791] N82-16733

**HEAT ACCLIMATIZATION**
Mechanisms of adaptation to ergothermic hypoxemia
in athletes specializing in different sports
A82-21820
Physical performance tasks required of U. S.
Marines operating in a desert environment
[AD-A107866] N82-17863

**HEAT STROKE**
Cardiovascular origins of heatstroke
pathophysiology - An anesthetized rat model
A82-21687

**HELICOPTER PERFORMANCE**
The reliability of flight personnel during the
operation of the Mi-4 helicopter
A82-19014

**HELICOPTERS**
Causes of fatigue among crews of civil aviation
helicopters
N82-16708
Physiological and hygienic evaluation of vibration
in the cockpit of a cargo helicopter
N82-16709
An evaluation of helicopter noise and vibration
ride qualities criteria
[NASA-TM-83251] N82-17871

**HELMETS**
Evaluation of man's endurance of local pressure to
the head and objective assessment of hygienic
specifications for protective helmets
N82-16710

**HEMATOLOGY**
Changes in morphological and cytogenetic
hematopoietic indicators in hamadryas baboons
exposed to chronic low-level radiation
A82-21726
The correlation between hematologic and
biochemical indicators in the turtles Testudo
horsfieldi
A82-21733
Blood serum nuclease activity in healthy persons
and patients with various hematological diseases
A82-21813

**HEMODYNAMIC RESPONSES**
Changes of the aggregation and orientation
structure of blood in pulsating flow
A82-20333
Changes in the main characteristics of the central
hemodynamics of healthy individuals and
hypertension patients during physical exercise
A82-21711
Mechanisms of compensation and adaptation in
relation to the hyperfunction of the heart
A82-21756
A comparative evaluation of the hemodynamic
effects of large doses of morphine, dipidolor,
pentazocine, and phentanyl
A82-21795
Computer-aided analysis of the effect of the
initial narcosis on the central hemodynamics
A82-21797
Question of redistribution of blood in orthostatic
position
N82-16705
Systemic and cerebral hemodynamics in flight
personnel exposed to moderate hypoxia
N82-16707
Results of study of hemodynamics and phase
structure of the cardiac cycle during functional
test with lower body negative pressure during
140-day Salyut-6 station flight
N82-16722
Jugular, right atrial pressure and cerebral
hemodynamics of healthy man submitted to
postural tests
N82-17825

**HEMODYNAMICS**
Pulmonary shunting and its regulation
A82-21728
Echoencephalographic indices in patients with
hypertensive disease under the effect of
functional loads
A82-21753
Phasic energy analysis of rheoencephalograms in
the detection of the decompensation of cerebral
hemodynamics
A82-21754
Certain features of cerebral hemodynamics in doing
mental work at different air temperatures
A82-21759
Effects of pyrroxane and methylapogalantamine on
cerebral blood circulation and oxygen regime
A82-21776
Age related distinctions of commonauts regional
hemodynamics
N82-17829

**HEMOGLOBIN**
Variability of oxygen affinity of blood - Human
subjects native to high altutude
A82-19493
The correlation between hematologic and
biochemical indicators in the turtles Testudo
horsfieldi
A82-21733
Effect of low-temperature on the membrane
permeability of erythrocytes reconstituted in
media of different ionic composition
A82-21737

**HEREDITY**
Possible mechanism for chemical induction of
chromosome aberrations in male meiotic and
postmeiotic germ cells of mice
[DE81-031999] N82-16700

**HETEROCYCLIC COMPOUNDS**
Nitrogen compounds in carbonaceous meteorites - A
reassessment
A82-20909

**HEXOKINASE**
Some indicators of carbohydrate metabolism in rat
lung during repeated and chronic hypoxia
A82-20302

**HIBERNATION**
Effects of temperature on the duration of arousal
episodes during hibernation
A82-21934

**HIGH ALTITUDE BREATHING**
Oxygen transport in dogs native to high altitudes
during exercise
A82-21719

HIGH ALTITUDE ENVIRONMENTS
Variability of oxygen affinity of blood - Human subjects native to high altitude A82-19493
Adaptation to high-altitude hypoxia at different ambient temperatures /before and during adaptation/ A82-21715
HIGH ALTITUDE TESTS
Psychological testing at high altitudes A82-21679
HIGH PRESSURE
Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism A82-21717
HIGH TEMPERATURE ENVIRONMENTS
The effects of elevated environmental temperature combined with radiation on the organism A82-21752
HIPPOCAMPUS
Functional state of the hippocampal-reticular complex under submaximal physical load and fatigue A82-21786
HISTIDINE
Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments A82-20952
Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise A82-21927
HISTOCHEMICAL ANALYSIS
A histochemical investigation of the microvascular effectors regulating the supply of blood to the cerebral cortex A82-21744
HOMEOSTASIS
An investigation of the biological activity of chalones separated from normal livers and from livers that are being regenerated A82-21742
The multiple forms of tyrosine aminotransferase in rat liver cells and their role in cellular homeostasis A82-21807
Enzymatic capacities of skeletal muscle - Effects of different types of training A82-22248
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706
HOMING
Study of homing pigeons in Brazil: Some preliminary results [INPE-2248-PRE/032] N82-17839
HORMONE METABOLISMS
The effect of the prolonged administration of sodium hydroxybutyrate on the physical work capacity and muscle tissue state of rats A82-21779
The multiple forms of tyrosine aminotransferase in rat liver cells and their role in cellular homeostasis A82-21807
HORMONES
Effects of vasopressin administration on diuresis of water immersion in normal humans A82-19491
Mechanisms for the regulation of the intracellular calcium distribution A82-21774
HUMAN BEHAVIOR
Emotions, sleep, and health A82-21804
HUMAN BEINGS
Functional condition and work capacity under mountain conditions A82-20313
Frequency characteristics of visual evoked potentials in different regions of the human cerebral cortex A82-20314
The effects of an aqueous potassium loading test on kidney function A82-20329
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
HUMAN BODY
Difference between eye closure and visual stabilization in the control of posture in man A82-21686
The economy of muscular work during unfused tetanus A82-21701
Decussations in the human muscular system A82-21762
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726
Chemicals Identified in Human Biological Media [DE81-030813] N82-16735
HUMAN FACTORS ENGINEERING
Psychological problems in the mutual adaptation of man and machine in control systems --- Russian book A82-19000
Evaluation of maximal and submaximal static muscle exertions A82-19223
Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance A82-19225
Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design A82-19250
Survival in space --- spacesuit development A82-20257
A program for assessing pilot mental state in flight simulators [AIAA PAPER 82-0257] A82-22078
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710
Pilot workload: A survey of operational problems [AD-A107758] N82-16745
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1) [NASA-TM-83826] N82-17875
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1 [AD-A107802] N82-17876
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2 [AD-A107803] N82-17877
HUMAN PATHOLOGY
The healthy and the diseased human brain --- Russian book A82-18872
Changes in microcirculatory flow with respiratory insufficiency A82-20323
The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity A82-20328
Investigation and evaluation of cardiac arrhythmias in healthy young persons A82-21710
Effect of cooling of the rhythmo-inotropic ratio in a pathologically altered myocardium A82-21740
Summary of a discussion on the problem of the 'biological norm' /in relation to an assessment of criteria of the harmfulness of chemical effects/ A82-21750
Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness A82-21755
Hygienic standards for industrial noise A82-21794
Blood serum nuclease activity in healthy persons and patients with various hematological diseases A82-21813
Trial on the use of stabilography in the medical supervision of boxers A82-21817
HUMAN PERFORMANCE
Differences in eye movement data recorded by electro-oculography and corneal reflection techniques A82-19224

Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance
A82-19225

Effects of relative metabolic rate and heart rate variation on the performance of flight attendants
A82-21680

Changes in the main characteristics of the central hemodynamics of healthy individuals and hypertension patients during physical exercise
A82-21711

The effects of elevated environmental temperature combined with radiation on the organism
A82-21752

The physical activity of humans as a social and biological problem
A82-21760

The effects of emotional activation on the spatial synchronization of human brain biopotentials
A82-21785

A study of tropomyosins in human muscular and nonmuscular organs
A82-21806

Predicting the potentials of young swimmers based on clinical and physiological data
A82-21814

Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

An analysis of cognitive mapping skill
[AD-A106145] N82-16740

Ability differences and cognitive mapping skill
[AD-A106389] N82-16741

Pilot workload: A survey of operational problems
[AD-A107758] N82-16745

Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

**HUMAN REACTIONS**

Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans
A82-20315

The effects of narcotic analgesics on animal sensitivity to hypoxia
A82-20316

A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts
A82-21729

The thermal response of a human in the near-zone of a resonant thin-wire antenna
A82-22206

Phenomena of fluctuation of human reaction to antiorthostatic position
N82-16721

Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737

**HUMAN TOLERANCES**

Natural resistance of the organisms of seamen during postcruise rest
A82-20311

Microcirculation, tolerance to physical strain, and certain homeostasis parameters in patients with angina pectoris
A82-20324

Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism
A82-21717

Seasonal rhythm of the immune reactivity and heart tolerance to physical load in patients with ischemic heart disease
A82-21802

Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets
N82-16710

**HUMAN WASTES**

Possible use of house fly larvae for utilization of organic waste in biological life-support systems
N82-16719

**HYDROCARBONS**

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

**HYDROCYANIC ACID**

Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay
A82-20917

HCN oligomerization - Isolation and preliminary characterization of a new precursor of adenine
A82-20930

**HYDRODYNAMICS**

A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

**HYDROGEN**

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

**HYGIENE**

Complex physiological-hygienic characteristics of a new work-rest regime for seamen
A82-21748

Summary of a discussion on the problem of the 'biological norm' /in relation to an assessment of criteria of the harmfulness of chemical effects/
A82-21750

Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter
N82-16709

Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets
N82-16710

Hygienic principles of ongoing monitoring of quality of recycled water during space flights
N82-16717

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718

**HYPERBARIC CHAMBERS**

Brain monoamine oxidase activity during cold adaptation and under the combined effects of cold and hyperbaric oxygenation
A82-19746

**HYPERCAPNIA**

The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747

The significance of airflow resistance to changes in responses to increasing hypercapnia
A82-20327

**HYPERKINESIA**

The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats
A82-20305

**HYPERTENSION**

The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension
A82-21709

Changes in the main characteristics of the central hemodynamics of healthy individuals and hypertension patients during physical exercise
A82-21711

The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension
A82-21712

Echoencephalographic indices in patients with hypertensive disease under the effect of functional loads
A82-21753

Emotional stress as a factor in cardiovascular disorders
A82-21796

A model for essential hypertension: Metabolic studies
N82-17867

**HYPERTHERMIA**

The effect of synaptically active drugs on the hyperthermic effect of prostaglandin E2 in rats
A82-21741

The effects of successive ionizing radiation and heat on antibody formation
A82-21751

**HYPODYNAMIA**

Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
N82-17820

Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936
N82-17833

Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
N82-17834

**HYPOKINESIA**

The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats
A82-20305

The morphology of the lungs of dogs whose movement is completely restricted
A82-21765

Age morphofunctional characteristics of chromaffin tissue in the celiac nodes, both in the norm and with hypokinesia
A82-21766

Rationalizing physical regimen of sedentary workers
A82-21816

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
N82-16723

Human lipid metabolism during confinement in pressure chamber
N82-17822

Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

**HYPOTHALAMUS**

Acute experimental emotional stress in rabbits in a modulated electromagnetic field
A82-20307

Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716

**HYPOTHERMIA**

Effect of cooling of the rhythmo-inotropic ratio in a pathologically altered myocardium
A82-21740

The effect of cholinomimetics on the development of hypothermia
A82-21781

The relationship between cardiac and motor components of a conditioned reflex upon the local cooling of various zones of the cerebral cortex in cats
A82-21787

Temperature dependence of alanine and aspartate aminotransferase activities in rat brain during hypothermia of various durations and adrenalectomy
A82-21812

**HYPOVOLEMIA**

Effect of blood volume on sweating rate and body fluids in exercising humans
A82-19495

**HYPOXEMIA**

Mechanisms of adaptation to ergothermic hypoxemia in athletes specializing in different sports
A82-21820

**HYPOXIA**

Enhanced heat production in physically restrained rats in hypoxia
A82-19496

Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia
A82-19497

The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747

Some indicators of carbohydrate metabolism in rat lung during repeated and chronic hypoxia
A82-20302

Physiology and pathology of respiration and means of correcting oxygen deficiencies in an organism /Meeting of the Interdepartmental Commission on the Coordination of Studies in Medicine of the Academy of Sciences of the Ukrainian SSR and the Ministry of Health of the Ukrainian SSR/
A82-20303

The effects of narcotic analgesics on animal sensitivity to hypoxia
A82-20316

Special and clinical physiology of hypoxic states
A82-20317

Elevation of hypoxia resistance with the use of gutimine
A82-20319

The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response
A82-20320

A combined method for the study of tissue respiration under conditions corresponding to natural gas homeostasis
A82-20321

Psychological testing at high altitudes
A82-21679

The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension
A82-21712

Adaptation to high-altitude hypoxia at different ambient temperatures /before and during adaptation/
A82-21715

The effect of piracetam on the body's resistance to hypoxia
A82-21777

Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia
A82-21780

Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia
N82-16707

Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia
N82-16724

Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man
N82-17827

Method of assessing individual resistance of rats to hypoxic hypoxia
N82-17837

**I**

**IMAGE CONTRAST**

Flow visualization techniques in medical and biological applications
A82-20778

**IMAGING TECHNIQUES**

Visual technology and the future --- for flight simulators
A82-20538

**IMMOBILIZATION**

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
N82-16723

**IMMUNITY**

The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response
A82-20320

Stress and immunity in athletes
A82-21821

**IMMUNOLOGY**

Natural resistance of the organisms of seamen during postcruise rest
A82-20311

Cellular and molecular bases of local immunity
A82-21773

Seasonal rhythm of the immune reactivity and heart tolerance to physical load in patients with ischemic heart disease
A82-21802

A study of tropomyosins in human muscular and nonmuscular organs
A82-21806

The mathematics of immunity --- response to viral intrusion
A82-21824

**IMPACT DAMAGE**

Trial on the use of stabilography in the medical supervision of boxers
A82-21817

Review of literature and regulation relating to thoracic impact tolerance and injury criteria [PB82-108697] N82-16736
IMPLANTED ELECTRODES (BIOLOGY)
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies A82-20893
IN-FLIGHT MONITORING
Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821
INDUSTRIAL SAFETY
Methods for diagnosing hearing loss in workers exposed to high noise levels in accordance with state standards A82-21793
Hygienic standards for industrial noise A82-21794
INFORMATION FLOW
Control and automatic processing during tasks requiring sustained attention - A new approach to vigilance A82-19225
INFRARED SPECTRA
Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum A82-21208
INHIBITORS
A mathematical model of cell populations with stem cells A82-21702
Approaches to the removal of G2-chalone from the liver of rats A82-21810
INJURIES
Dynamics of the condition of granulation tissue after injuries sustained at different times of the day A82-21763
INORGANIC COMPOUNDS
Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum A82-21208
INTERMOLECULAR FORCES
Evolving nucleotide binding surfaces A82-20954
INTERSTELLAR CHEMISTRY
Chemical evolution of interstellar dust - A source of prebiotic material A82-20863
Nature and origin of organic molecules in comets A82-20906
INTERSTELLAR EXTINCTION
Comets - A vehicle for panspermia A82-20868
INTERSTELLAR MATTER
Chemical evolution of interstellar dust - A source of prebiotic material A82-20863
Cometary material and the origins of life on earth A82-20867
Interstellar molecules and the origin of life A82-20902
On the origin of organic molecules in interstellar space and some of its consequences A82-20904
Nature and origin of organic molecules in comets A82-20906
INTESTINES
The myenteric plexus - Basic principles of modeling neuronal organization A82-20337
The role of intestinal nerves in the nutrient induced intestinal hyperemia N82-17869
IODINE COMPOUNDS
Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830
ION EXCHANGE MEMBRANE ELECTROLYTES
In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids A82-22249
ION EXCHANGE RESINS
The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin A82-20934
ION EXCHANGING
Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810
IONIZING RADIATION
The biological effects of low-level ionizing radiation A82-20146
The effects of successive ionizing radiation and heat on antibody formation A82-21751
IRON COMPOUNDS
Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay A82-20917
IRON METEORITES
Abiotic organic synthesis in space A82-20910
IRRADIATION
Asymmetrical radical formation in beta-irradiated D- and L-alanines A82-20949
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy [MBB-UA-581-81-O] N82-17843
IRREVERSIBLE PROCESSES
Competition, coexistence and irreversibility in models of early molecular evolution A82-20951
IRRITATION
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA) [AD-A107574] N82-17840
ISCHEMIA
Microcirculation, tolerance to physical strain, and certain homeostasis parameters in patients with angina pectoris A82-20324
Mechanisms of compensation and adaptation in relation to the hyperfunction of the heart A82-21756
The application of bicycle ergometry to the early detection of ischemic heart disease A82-21775
Seasonal rhythm of the immune reactivity and heart tolerance to physical load in patients with ischemic heart disease A82-21802
Evaluation of the functional state of the cardiovascular system in patients with ischemic heart disease with reference to the nature of their occupational activity A82-21803
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724
ISOMERS
A model for the enantiomeric enrichment of polypeptides on the primitive earth A82-20020
Search for effect of longitudinally polarized protons on optically active amino acids A82-20021
Stereoselective interactions of small biological molecules A82-20945
Possible selective adsorption of enantiomers by Na-montmorillonite A82-20946

J

JUDGMENTS
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements [AD-A106143] N82-16739
JUPITER ATMOSPHERE
Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter A82-20914

K

**KEROGEN**
Organic geochemistry of the Isua supracrustals A82-20961

**KIDNEYS**
The effects of an aqueous potassium loading test on kidney function A82-20329
The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension A82-21709
A three-dimensional model for the arrangement of the vascular and tubular components of the renal osmoregulatory apparatus A82-21745
Effects of dioxalin and oxamide on succinate and lactate dehydrogenase activities in rat liver, kidney and brain tissues and on the chromosomal apparatus of bone marrow cells A82-21778

**KINETICS**
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715

L

**LARVAE**
Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719

**LASER APPLICATIONS**
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843

**LEUCINE**
The radiolysis and radioracemization of amino acids on silica surfaces A82-20019

**LEUKOCYTES**
Natural resistance of the organisms of seamen during postcruise rest A82-20311

**LIFE SUPPORT SYSTEMS**
Survival in space --- spacesuit development A82-20257
USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981
[JPRS-79849] N82-16704
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718
Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720

**LIGHT (VISIBLE RADIATION)**
Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes A82-21705

**LIGHTNING**
Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres A82-20016

**LIMBS (ANATOMY)**
Disturbances in biological rhythms as a result of a conflict of incompatible stimuli A82-21720

**LIPID METABOLISM**
Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes A82-21705
The relationship between carbohydrate and lipid metabolisms in muscle cell energetics under the influence of ATPase loading - Mathematical model A82-21706
Activation of the metabolism of the gamma-aminobutyric acid system in the cerebral hemispheres under various types of stress A82-21746
The effect of physical training on the lipid and lipoprotein metabolism in people of various ages A82-21757
Nonesterified fatty acid metabolism during exercise in humans A82-21809
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724
Human lipid metabolism during confinement in pressure chamber N82-17822
A model for essential hypertension: Metabolic studies N82-17867

**LIPIDS**
Membrane lipids and the origin of life A82-20943
Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold A82-21736
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

**LIPOPROTEINS**
The effect of physical training on the lipid and lipoprotein metabolism in people of various ages A82-21757

**LIQUID CHROMATOGRAPHY**
Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants A82-20944

**LIQUID PHASES**
Liquid water on a planet over cosmic periods A82-20907

**LIVER**
The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver A82-21732
Activation of succinate dehydrogenation in rat liver by noradrenalin, cAMP and acute cooling A82-21734
Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold A82-21736
An investigation of the biological activity of chalones separated from normal livers and from livers that are being regenerated A82-21742
Effects of dioxalin and oxamide on succinate and lactate dehydrogenase activities in rat liver, kidney and brain tissues and on the chromosomal apparatus of bone marrow cells A82-21778
The ultrastructure of the liver sinusoids of mice under conditions of acute stress - Morphometric study A82-21782
The multiple forms of tyrosine aminotransferase in rat liver cells and their role in cellular homeostasis A82-21807
Approaches to the removal of G2-chalone from the liver of rats A82-21810

**LONG DURATION SPACE FLIGHT**
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722
Diet of crews of three main expeditions aboard Salyut-6 orbital station N82-17815
Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817
Prevention of staphylococcal infections during space flights N82-17818

Human adrenosympathetic system during immersion in water
N82-17819

**LONG TERM EFFECTS**

The influence of muscular work on the vestigial effects of cold acclimation
A82-19749

Effects of long-term exposure to low levels of ozone - A review
A82-21676

Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold
A82-21736

Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors
N82-17816

**LOUDNESS**

Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

**LOW TEMPERATURE**

The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver
A82-21732

Effect of low-temperature on the membrane permeability of erythrocytes reconstituted in media of different ionic composition
A82-21737

**LOW TEMPERATURE ENVIRONMENTS**

Activation of succinate dehydrogenation in rat liver by noradrenalin, cAMP and acute cooling
A82-21734

The effect of low temperature on the activity and substrate specificity of monoamine oxidases in rat brain mitochondria
A82-21735

Comparative neurophysiclogical characteristics of cold and caudate tremors
A82-21790

**LOWER BODY NEGATIVE PRESSURE**

Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight
N82-16722

**LUNG MORPHOLOGY**

The effect of blood pressure in the pulmonary artery on gas exchange in functionally heterogeneous lungs
A82-21738

The morphology of the lungs of dogs whose movement is completely restricted
A82-21765

The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts
A82-21801

An asymmetrical model of the airways of the dog lung
A82-21926

**LUNGS**

Some indicators of carbohydrate metabolism in rat lung during repeated and chronic hypoxia
A82-20302

Changes in microcirculatory flow with respiratory insufficiency
A82-20323

Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold
A82-21736

A computational model for expiratory flow
A82-21929

Rate of uptake of carbon monoxide at different inspired concentrations in humans
A82-21930

Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842

**LYMPH**

Changes in the structure and cellular composition of the inguinal lymph nodes of white rats subjected to static and dynamic stresses
A82-21761

**LYMPHOCYTES**

The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response
A82-20320

**LYSOZYME**

Lysosomes under conditions of stress
A82-21770

M

**MAGNETIC EFFECTS**

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

**MAGNETIC FIELDS**

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737

Effect of stationary magnetic field on the endocrine system
N82-17814

**MALES**

A study of treadmill exercise protocols for Chinese males
A82-21677

Phenomena of fluctuation of human reaction to antiorthostatic position
N82-16721

**MAMMALS**

Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107574] N82-17840

**MAN MACHINE SYSTEMS**

Psychological problems in the mutual adaptation of man and machine in control systems --- Russian book
A82-19000

Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design
A82-19258

Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875

**MAPPING**

An analysis of cognitive mapping skill
[AD-A106145] N82-16740

Ability differences and cognitive mapping skill
[AD-A106389] N82-16741

**MARINE CHEMISTRY**

Chemical evolution and plate tectonics
A82-20918

**MARINE ENVIRONMENTS**

The Strecker synthesis in the primitive ocean --- chemical evolution
A82-20919

Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans
A82-20921

Environmental conditions for the formation of marigranules and kinetic studies on the formation --- chemical evolution of amino acids in sea medium
A82-20942

A statistical examination of three approaches for predicting motion sickness incidence
A82-21685

**MARS SURFACE SAMPLES**

Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum
A82-21208

**MASKING**

Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860

**MATERIAL ABSORPTION**

Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703

**MATHEMATICAL MODELS**

The mathematics of immunity --- response to viral intrusion
A82-21824

A computational model for expiratory flow
A82-21929

**MEDICAL ELECTRONICS**

Microelectronics and computers in medicine
A82-21268

**MEDICAL EQUIPMENT**
Portable medical status and treatment system
[NASA-CR-167496] N82-17862

**MEDICAL PERSONNEL**
Comparative study of several physiological parameters in the evaluation of functional condition in nurses
A82-21826

**MEDICAL SCIENCE**
Flow visualization techniques in medical and biological applications
A82-20778

**MEDICAL SERVICES**
Physical and physiological features of long-range flight and its impact on patients
A82-19012
First aid for thorax traumas: Thorax drainage through suction - Report on 25 cases
A82-19016

**MELANOIDIN**
Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans
A82-20921

**MEMBRANE STRUCTURES**
Investigation of the otolithic membrane of the utricle of the guinea pig
A82-20301
Membrane lipids and the origin of life
A82-20943

**MEMBRANES**
Condition of meningeal nervous system during repeated exposure to transverse accelerations
N82-16730
Facilitated diffusion of small non-electrolytes in the human red blood cell
N82-17855

**MENTAL PERFORMANCE**
Electroencephalographic correlates of the hemispheric functional asymmetry in the human brain
A82-21454
Certain features of cerebral hemodynamics in doing mental work at different air temperatures
A82-21759
EEG evaluation of mental stress
A82-21784
Rationalizing physical regimen of sedentary workers
A82-21818
A program for assessing pilot mental state in flight simulators
[AIAA PAPER 82-0257] A82-22078

**METABOLISM**
Phylogenetic sequence of metabolic pathways in Precambrian cellular life
A82-20967
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz
A82-21758
Effects of temperature on the duration of arousal episodes during hibernation
A82-21934
Metabolic processes in rat skeletal muscles after flight aboard Cosmos-936
N82-17833
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

**METAL IONS**
Template-directed synthesis of oligoguanylic acids - Metal ion catalysis
A82-20932

**METEORITIC COMPOSITION**
Organic analysis of the Antarctic carbonaceous chondrites
A82-20908
Abiotic organic synthesis in space
A82-20910
Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems
A82-21988

**METEOROLOGICAL PARAMETERS**
Effects of ambient parameters on man
N82-17826

**METHANE**
Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter
A82-20914

**METHYL ALCOHOLS**
Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis
A82-20920

**MICE**
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

**MICROBIOLOGY**
Extreme environments - Are there any limits to life
A82-20869
Microbial life in cold saline environments
A82-20974
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris
N82-16711

**MICROELECTRONICS**
Microelectronics and computers in medicine
A82-21268

**MICROORGANISMS**
Extreme environments - Are there any limits to life
A82-20869
Ultraviolet selection pressure in the Prephanerozoic --- ancient microorganism survival
A82-20969
Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

**MICROPHONES**
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744

**MICROSTRUCTURE**
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites
N82-17835

**MICROWAVE ANTENNAS**
The thermal response of a human in the near-zone of a resonant thin-wire antenna
A82-22206

**MICROWAVE PROBES**
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I
A82-20891
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results
A82-20892
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies
A82-20893

**MIDDLE EAR**
Peculiarities of the middle ear structure in rodents as an index of the frequency tuning of their auditory system
A82-21714
Characteristics of the structure and functions of the middle ear of lizards
A82-21823

**MILITARY AIRCRAFT**
Flight simulation - The military need
A82-20529

**MILITARY OPERATIONS**
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

**MINES (EXCAVATIONS)**
Physical health of truck drivers in the open-pit mining industry of the far north
A82-21805

**MINIATURE ELECTRONIC EQUIPMENT**
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies
A82-20893

MEIOSIS
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice [DE81-031999] N82-16700

MITOCHONDRIA
Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data A82-20972
The effect of low temperature on the activity and substrate specificity of monoamine oxidases in rat brain mitochondria A82-21735
Mechanisms for the regulation of the intracellular calcium distribution A82-21774
Enzymatic capacities of skeletal muscle - Effects of different types of training A82-22248

MOISTURE CONTENT
Storage stability and improvement of intermediate moisture foods, phase 5 [NASA-CR-167503] N82-16742

MOLECULAR BIOLOGY
Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants A82-20944
Stereoselective interactions of small biological molecules A82-20945
Evolving nucleotide binding surfaces A82-20954
Organic geochemistry of the Isua supracrustals A82-20961
Experiments on transfer of organic molecular information into crystal lattice superstructures A82-20966
Phylogenetic sequence of metabolic pathways in Precambrian cellular life A82-20967
The evolution of blue-greens and the origins of chloroplasts A82-20971
Cellular and molecular bases of local immunity A82-21773

MOLECULAR CLOUDS
Interstellar molecules and the origin of life A82-20902
On the origin of organic molecules in interstellar space and some of its consequences A82-20904

MOLECULAR STRUCTURE
The radiolysis and radioracemization of amino acids on silica surfaces A82-20019
A model for the enantiomeric enrichment of polypeptides on the primitive earth A82-20020
Stereoselective interactions of small biological molecules A82-20945
Competition, coexistence and irreversibility in models of early molecular evolution A82-20951
Evolving nucleotide binding surfaces A82-20954
Secondary structures of polypeptides as evolutionary growing points A82-20962

MONAURAL SIGNALS
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

MONKEYS
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

MONOCHROMATIC RADIATION
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation A82-22200

MONOCULAR VISION
The prevalence of visual deficiencies among 1979 general aviation accident airmen A82-21688

MONOSACCHARIDES
Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model' A82-20923

MONTMORILLONITE
Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay A82-20917
On the polycondensation of amino acid adenylates on montmorillonites A82-20939
Polymerization of serine guanylate in the presence of montmorillonite A82-20940
Possible selective adsorption of enantiomers by Na-montmorillonite A82-20946

MORPHINE
The effects of narcotic analgesics on animal sensitivity to hypoxia A82-20316
A comparative evaluation of the hemodynamic effects of large doses of morphine, dipidolor, pentazocine, and phentanyl A82-21795

MORPHOLOGY
The structural and functional organization of the ventrolateral nucleus of the thalamus A82-21455
Peculiarities of the middle ear structure in rodents as an index of the frequency tuning of their auditory system A82-21714
Changes in the structure and cellular composition of the inguinal lymph nodes of white rats subjected to static and dynamic stresses A82-21761
Decussations in the human muscular system A82-21762
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

MOTION PERCEPTION
Auditory depth perception - Localization of nonmoving and moving sound sources A82-21727

MOTION SICKNESS
A statistical examination of three approaches for predicting motion sickness incidence A82-21685
Acceleration measures and motion sickness incidence [AD-A107996] N82-16734

MOTION STABILITY
Biped walking - Model problems of dynamics and control A82-18977

MOUNTAIN INHABITANTS
Oxygen transport in dogs native to high altitudes during exercise A82-21719

MOUNTAINS
Functional condition and work capacity under mountain conditions A82-20313

MUSCLES
Cellular mechanisms of the Frank-Starling phenomenon A82-21456
Differentiation of muscles on the basis of trace-element composition A82-21704
The relationship between carbohydrate and lipid metabolisms in muscle cell energetics under the influence of ATPase loading - Mathematical model A82-21706
Decussations in the human muscular system A82-21762
A study of tropomyosins in human muscular and nonmuscular organs A82-21806
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714

Activity of some enzymes of carbohydrate metabolism in rat skeletal muscles after space flight
N82-17834

Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites
N82-17835

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist
N82-17854

**MUSCULAR FATIGUE**

Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness
A82-21755

**MUSCULAR FUNCTION**

Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia
A82-19497

The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747

The influence of muscular work on the vestigial effects of cold acclimation
A82-19749

Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress
A82-20322

Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity
A82-20330

Pulse rate evaluation of the relative physiological intensity of aerobic muscular work
A82-20331

The economy of muscular work during unfused tetanus
A82-21701

Effect of calcium on the temporal characteristics of muscle contraction
A82-21708

Study of the electrical activity of the extraocular muscles
A82-21731

Nucleic acid and protein metabolism in cardiac muscle
A82-21772

The effect of the prolonged administration of sodium hydroxybutyrate on the physical work capacity and muscle tissue state of rats
A82-21779

Types of spontaneous discharges in muscle receptors
A82-21789

Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936
N82-17833

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist
N82-17854

**MUSCULAR STRENGTH**

Evaluation of maximal and submaximal static muscle exertions
A82-19223

Bioenergetic characteristics of various kinds of physical loads
A82-20334

The effect of two years' training of aerobic power and muscle strength in male and female cadets
A82-21678

Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness
A82-21755

Regulation of calcium current and calcium activity in heart cells
N82-17870

**MUSCULAR TONUS**

The dynamics of muscular relaxation following unfused tetanuses of different durations
A82-21707

Study of the electrical activity of the extraocular muscles
A82-21731

**MUSCULOSKELETAL SYSTEM**

Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity
A82-20330

Characteristics and patterns of the individual development of male and female rats in the light of the energy rule of skeletal muscles
A82-21721

Decussations in the human muscular system
A82-21762

An electron microscope study of hyperplasia in fibers of the skeletal muscles of athletes
A82-21764

The source of reparative regeneration in skeletal muscle tissue
A82-21768

LDH isoenzyme spectrum in intact and denervated skeletal muscles of rats of various age during cold adaptation
A82-21798

Enzymatic capacities of skeletal muscle - Effects of different types of training
A82-22248

**MUTAGENS**

Mutagens and carcinogens - Occurrence and role during chemical and biological evolution
A82-20975

Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

**MUTATIONS**

A mathematical method for the enumeration of doublet codes --- in genetic coding theory
A82-20953

Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

**MYOCARDIAL INFARCTION**

Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan
N82-17852

**MYOCARDIUM**

The temperature dependence of the kinetics of isometric myocardium relaxation
A82-19748

Cellular mechanisms of the Frank-Starling phenomenon
A82-21456

Effect of cooling of the rhythmo-inotropic ratio in a pathologically altered myocardium
A82-21740

Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness
A82-21755

Nucleic acid and protein metabolism in cardiac muscle
A82-21772

The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress
A82-21808

Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia
N82-16724

Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite
N82-17832

Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters
N82-17846

**MYOELECTRIC POTENTIALS**

Regulation of calcium current and calcium activity in heart cells
N82-17870

**N**

**NAPHTHALENE**

Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842

**NARCOSIS**

Computer-aided analysis of the effect of the initial narcosis on the central hemodynamics
A82-21797

NARCOTICS

The effects of narcotic analgesics on animal sensitivity to hypoxia A82-20316

A comparative evaluation of the hemodynamic effects of large doses of morphine, dipidolor, pentazocine, and phentanyl A82-21795

NAVIGATION

Study of homing pigeons in Brazil: Some preliminary results [INPE-2248-PRE/032] N82-17839

NAVY

Complex physiological-hygienic characteristics of a new work-rest regime for seamen A82-21748

NEAR ULTRAVIOLET RADIATION

Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation A82-22200

NEBULAE

Interstellar molecules and the origin of life A82-20902

NEODYMIUM LASERS

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy [MBB-UA-581-81-O] N82-17843

NERVES

LDH isoenzyme spectrum in intact and denervated skeletal muscles of rats of various age during cold adaptation A82-21798

The role of intestinal nerves in the nutrient induced intestinal hyperemia N82-17869

NEUROMUSCULAR TRANSMISSION

Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity A82-20330

NEURONS

Vestibular responses of neurons in the feline anterior suprasylvian gyrus and their interaction with responses to acoustic and facial stimuli A82-20309

The myenteric plexus - Basic principles of modeling neuronal organization A82-20337

Filtration properties of receptive fields of visual-cortex neurons A82-21470

A histochemical investigation of the microvascular effectors regulating the supply of blood to the cerebral cortex A82-21744

Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/ A82-21825

Electrode unit for testing human H reflex N82-16728

NEUROPHYSIOLOGY

The healthy and the diseased human brain --- Russian book A82-18872

The myenteric plexus - Basic principles of modeling neuronal organization A82-20337

The structural and functional organization of the ventrolateral nucleus of the thalamus A82-21455

Filtration properties of receptive fields of visual-cortex neurons A82-21470

The circadian rhythm of activity of adrenergic nerve fibers in the dura mater of rats A82-21743

Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise A82-21769

Comparative neurophysiological characteristics of cold and caudate tremors A82-21790

NEUROPSYCHIATRY

Models of a functional lapse in one hemisphere and of the neuropharmacological effects on the deep structures of the brain A82-20325

The use of linear models for EEG analysis A82-20326

NEUROTRANSMITTERS

Mechanisms for the regulation of the intracellular calcium distribution A82-21774

NEUTRON IRRADIATION

Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons A82-21723

NITRILES

The Strecker synthesis in the primitive ocean --- chemical evolution A82-20919

The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin A82-20934

NITROGEN

Amino acids derivatives synthesis from nitrogen, carbon and water by electric discharges A82-20018

NITROGEN COMPOUNDS

Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres A82-20016

Nitrogen compounds in carbonaceous meteorites - A reassessment A82-20909

NITROGEN METABOLISM

Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846

NOISE (SOUND)

The reliability of flight personnel during the operation of the Mi-4 helicopter A82-19014

NOISE INTENSITY

Cochlear analysis of sound intensity and some mechanisms of auditory sensations A82-21792

NOISE MEASUREMENT

Methods for diagnosing hearing loss in workers exposed to high noise levels in accordance with state standards A82-21793

A study of the acoustic reflex as elicited by selected environmental noise stimuli N82-17858

NOISE POLLUTION

Hygienic standards for industrial noise A82-21794

NOISE REDUCTION

The effects of microphones and facemasks on LPC vocoder performance [AD-A107908] N82-16744

NOISE THRESHOLD

Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels N82-17856

A study of the acoustic reflex as elicited by selected environmental noise stimuli N82-17858

NOISE TOLERANCE

Noise and vibration effects on vestibular and visual functions in teenagers A82-21747

Physiological-hygienic substantiation of admissible noise level in school rooms in a hot climate A82-21749

Features of the reaction to noise of the spinal capillaries of white rats A82-21767

NONELECTROLYTES

Facilitated diffusion of small non-electrolytes in the human red blood cell N82-17855

NORADRENALINE

Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress A82-20335

Activation of succinate dehydrogenation in rat liver by noradrenalin, cAMP and acute cooling A82-21734

Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716

NOREPINEPHRINE
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

NUCLEASE
Blood serum nuclease activity in healthy persons and patients with various hematological diseases
A82-21813

NUCLEIC ACIDS
A theory of the origin of life
A82-20023

Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides
A82-20928

The dynamics of protein and nucleic acid content in rat raphe nucleus cells after total deprivation of sleep /in a rotating cylinder/ and selective deprivation of its paradoxical phase
A82-21718

NUCLEOSIDES
Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides
A82-20928

NUCLEOTIDES
Polymerization of serine guanylate in the presence of montmorillonite
A82-20940

Evolving nucleotide binding surfaces
A82-20954

Summary of evidence for an anticodonic basis for the origin of the genetic code
A82-20958

DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria
A82-20970

NUTRIENTS
The role of intestinal nerves in the nutrient induced intestinal hyperemia
N82-17869

NUTRITIONAL REQUIREMENTS
In-flight diets and quantitative adequacy thereof to pilot expenditure
N82-17813

Diet of crews of three main expeditions aboard Salyut-6 orbital station
N82-17815

O

OASES
Microbial life in cold saline environments
A82-20974

OCEAN MODELS
Genesis of amino acids in the primeval sea - Formation of amino acids from sugars and ammonia in a modified sea medium
A82-20925

OCULOMETERS
Differences in eye movement data recorded by electro-oculography and corneal reflection techniques
A82-19224

OCULOMOTOR NERVES
Study of the electrical activity of the extraocular muscles
A82-21731

OPERATOR PERFORMANCE
Computer simulation as a visual aid in a video course --- for ATC system performance
A82-19248

Physical health of truck drivers in the open-pit mining industry of the far north
A82-21805

Mathematical model of a human operator detecting a signal on a noise background
A82-21893

OPERATORS (PERSONNEL)
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487]
N82-17874

OPHTHALMOLOGY
Method of recording rotatory eye reflexes
N82-16727

OPTICAL ACTIVITY
A model for the enantiomeric enrichment of polypeptides on the primitive earth
A82-20020

Search for effect of longitudinally polarized protons on optically active amino acids
A82-20021

Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants
A82-20944

Stereoselective interactions of small biological molecules
A82-20945

OPTICAL TRACKING
Study of the electrical activity of the extraocular muscles
A82-21731

OPTIMAL CONTROL
Biped walking - Model problems of dynamics and control
A82-18977

ORBITAL ASSEMBLY
Working in space --- Book
A82-20772

ORBITAL WORKERS
Working in space --- Book
A82-20772

ORGANIC CHEMISTRY
Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges
A82-20912

Experiments on transfer of organic molecular information into crystal lattice superstructures
A82-20966

ORGANIC COMPOUNDS
New data on abiogenic synthesis of prebiological compounds in volcanic processes
A82-20017

Cometary material and the origins of life on earth
A82-20867

On the origin of organic molecules in interstellar space and some of its consequences
A82-20904

Nature and origin of organic molecules in comets
A82-20906

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum
A82-21208

ORGANIC MATERIALS
Organic analysis of the Antarctic carbonaceous chondrites
A82-20908

Abiotic organic synthesis in space
A82-20910

Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems
A82-21988

ORGANIC PHOSPHORUS COMPOUNDS
Formation of energy rich phosphate in Fenton's reaction --- for prebiotic conditions
A82-20922

ORGANOMETALLIC COMPOUNDS
Porphyrin-like compounds genesis under simulated abiotic conditions
A82-20926

ORTHOSTATIC TOLERANCE
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters
A82-19492

Posturography of ataxia induced by Coriolis- and Purkinje-effects
A82-21684

Question of redistribution of blood in orthostatic position
N82-16705

Jugular, right atrial pressure and cerebral hemodynamics of healthy man submitted to postural tests
N82-17825

OSCILLATIONS
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths
N82-17849

OTOLARYNGOLOGY
The functional condition of the ampullar apparatus in Meniere's disease
A82-20308
Deontology in the practice of otorhinolaryngology
A82-20312

OTOLITH ORGANS
Investigation of the otolithic membrane of the utricle of the guinea pig
A82-20301

OXIDASE
Brain monoamine oxidase activity during cold adaptation and under the combined effects of cold and hyperbaric oxygenation
A82-19746
The effect of low temperature on the activity and substrate specificity of monoamine oxidases in rat brain mitochondria
A82-21735
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
N82-16723

OXIDATION
Clay-mediated reactions of HCN oligomers - The effect of the oxidation state of the clay
A82-20917
Formation of energy rich phosphate in Fenton's reaction --- for prebiotic conditions
A82-20922

OXYGEN
Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans
A82-20921
The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts
A82-21801
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae
N82-16720

OXYGEN CONSUMPTION
Brain monoamine oxidase activity during cold adaptation and under the combined effects of cold and hyperbaric oxygenation
A82-19746
The role of extracellular O2 and CO2 tensions in membrane mechanisms of cerebral arterial smooth muscle regulation
A82-19747
Elevation of hypoxia resistance with the use of gutimine
A82-20319
Pulse rate evaluation of the relative physiological intensity of aerobic muscular work
A82-20331
The effect of two years' training of aerobic power and muscle strength in male and female cadets
A82-21678
Oxygen transport in dogs native to high altitudes during exercise
A82-21719

OXYGEN MASKS
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744

OXYGEN METABOLISM
Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold
A82-21736
Effects of pyrroxane and methylapogalantamine on cerebral blood circulation and oxygen regime
A82-21776

OXYGEN TENSION
Variability of oxygen affinity of blood - Human subjects native to high altutude
A82-19493
The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method
A82-20318
A combined method for the study of tissue respiration under conditions corresponding to natural gas homeostasis
A82-20321

OXYGENATION
Variability of oxygen affinity of blood - Human subjects native to high altutude
A82-19493

OZONE
Comets and the photochemistry of the paleoatmosphere
A82-20866
Effects of long-term exposure to low levels of ozone - A review
A82-21676
Variation in plant response to ozone: A conceptual model of physiological events
[DE81-029692] N82-16701
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

P

PALEOBIOLOGY
Ultraviolet selection pressure in the Prephanerozoic --- ancient microorganism survival
A82-20969

PATHOGENESIS
Cardiovascular origins of heatstroke pathophysiology - An anesthetized rat model
A82-21687
Emotional stress as a factor in cardiovascular disorders
A82-21796
Prevention of staphylococcal infections during space flights
N82-17818

PATHOLOGICAL EFFECTS
Physiology and pathology of respiration and means of correcting oxygen deficiencies in an organism /Meeting of the Interdepartmental Commission on the Coordination of Studies in Medicine of the Academy of Sciences of the Ukrainian SSR and the Ministry of Health of the Ukrainian SSR/
A82-20303

PATIENTS
Physical and physiological features of long-range flight and its impact on patients
A82-19012

PENTOBARBITAL SODIUM
Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia
A82-19497

PEPTIDES
Parameters of the interaction of bradykinin with cardiovascular system receptors
A82-20332
Clays as prebiotic photocatalysts
A82-20916
Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments
A82-20952

PERCEPTION
An analysis of cognitive mapping skill
[AD-A106145] N82-16740
Ability differences and cognitive mapping skill
[AD-A106389] N82-16741

PERFORMANCE PREDICTION
Predicting the potentials of young swimmers based on clinical and physiological data
A82-21814

PERIPHERAL CIRCULATION
Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots
A82-21457

PERIPHERAL NERVOUS SYSTEM
Condition of meningeal nervous system during repeated exposure to transverse accelerations
N82-16730

PERMITTIVITY
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I
A82-20891

Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results A82-20892
PEROXIDES
Peroxidation of lipids in the liver and lungs of rats during prolonged adaptation to the cold A82-21736
PERSONNEL
Laws governing readaptation for seamen after a low-latitude cruise A82-20310
PESTICIDES
Chemicals Identified in Human Biological Media [DE81-030813] N82-16735
PETROLOGY
Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems A82-21988
PHARMACOLOGY
Elevation of hypoxia resistance with the use of gutimine A82-20319
Models of a functional lapse in one hemisphere and of the neuropharmocological effects on the deep structures of the brain A82-20325
Flow visualization techniques in medical and biological applications A82-20778
The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey A82-21682
Effects of pyrroxane and methylapogalantamine on cerebral blood circulation and oxygen regime A82-21776
The effect of piracetam on the body's resistance to hypoxia A82-21777
Comparative neurophysiological characteristics of cold and caudate tremors A82-21790
PHOSPHATES
Formation of energy rich phosphate in Fenton's reaction --- for prebiotic conditions A82-20922
Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats A82-21725
PHOSPHINES
Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter A82-20914
Possible role of phosphine in chemical evolution A82-20915
PHOSPHORUS COMPOUNDS
Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model' A82-20923
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA) [AD-A107574] N82-17840
PHOSPHORUS METABOLISM
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
PHOTOCHEMICAL REACTIONS
Comets and the photochemistry of the paleoatmosphere A82-20866
Clays as prebiotic photocatalysts A82-20916
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization A82-20968
PHOTOLYSIS
Far-UV photolysis of methane-water gaseous mixtures and the prebiotic synthesis of aldehydes A82-20913
Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter A82-20914
Possible role of phosphine in chemical evolution A82-20915
PHOTOOXIDATION
Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes A82-21705
PHOTORECEPTORS
Psychophysical evidence for more than two kinds of cone in dichromatic color blindness A82-19608
Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes A82-21705
PHOTOSENSITIVITY
Psychophysical evidence for more than two kinds of cone in dichromatic color blindness A82-19608
PHOTOSYNTHESIS
Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis A82-20920
Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data A82-20972
On the origin of photosynthetic eukaryotic cells - Cyanidium caldarium as a 'bridge' alga between prokaryotic cyanobacteria and eukaryotic rhodophytes: Evidence from environmental, polysaccharide biochemistry and ultrastructural studies A82-20973
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720
The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2 N82-17811
PHYSICAL CHEMISTRY
Storage stability and improvement of intermediate moisture foods, phase 5 [NASA-CR-167503] N82-16742
PHYSICAL EXERCISE
Effect of blood volume on sweating rate and body fluids in exercising humans A82-19495
Enhanced heat production in physically restrained rats in hypoxia A82-19496
The influence of muscular work on the vestigial effects of cold acclimation A82-19749
Microcirculation, tolerance to physical strain, and certain homeostasis parameters in patients with angina pectoris A82-20324
Pulse rate evaluation of the relative physiological intensity of aerobic muscular work A82-20331
Bioenergetic characteristics of various kinds of physical loads A82-20334
A study of treadmill exercise protocols for Chinese males A82-21677
The effect of two years' training of aerobic power and muscle strength in male and female cadets A82-21678
Changes in the main characteristics of the central hemodynamics of healthy individuals and hypertension patients during physical exercise A82-21711
Oxygen transport in dogs native to high altitudes during exercise A82-21719
The effect of physical training on the lipid and lipoprotein metabolism in people of various ages A82-21757
The physical activity of humans as a social and biological problem A82-21760
Changes in the structure and cellular composition of the inguinal lymph nodes of white rats subjected to static and dynamic stresses A82-21761

An electron microscope study of hyperplasia in fibers of the skeletal muscles of athletes A82-21766
Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia A82-21780
Functional state of the hippocampal-reticular complex under submaximal physical load and fatigue A82-21786
Seasonal rhythm of the immune reactivity and heart tolerance to physical load in patients with ischemic heart disease A82-21802
Nonesterified fatty acid metabolism during exercise in humans A82-21809
The dynamics of heart rate recovery following work of various aerobic intensities A82-21815
Development of an automatic data bank for managing physical education of students A82-21816
Rationalizing physical regimen of sedentary workers A82-21818
Effect of the functional properties of the vestibular analyzer on the effectiveness of instruction in gymnastics A82-21819
Mechanisms of adaptation to ergothermic hypoxemia in athletes specializing in different sports A82-21820
Radiometric determination of potassium content in athletes A82-21822
Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise A82-21927

PHYSICAL FACTORS
Fatigue in Flight Inspection Field Office (FIFO) flight crews [AD-A106791] N82-16733

PHYSICAL FITNESS
ERG description algorithm for use in clinical practice and studies of work capacity A82-20304
The effect of two years' training of aerobic power and muscle strength in male and female cadets A82-21678
Physical health of truck drivers in the open-pit mining industry of the far north A82-21805
Stress and immunity in athletes A82-21821
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729
Physical performance tasks required of U. S. Marines operating in a desert environment [AD-A107866] N82-17863

PHYSICAL WORK
Evaluation of maximal and submaximal static muscle exertions A82-19223
The economy of muscular work during unfused tetanus A82-21701
The application of bicycle ergometry to the early detection of ischemic heart disease A82-21775
Evaluation of the functional state of the cardiovascular system in patients with ischemic heart disease with reference to the nature of their occupational activity A82-21803
Fatigue in Flight Inspection Field Office (FIFO) flight crews [AD-A106791] N82-16733

PHYSIOCHEMISTRY
A study of tropomyosins in human muscular and nonmuscular organs A82-21806

PHYSIOLOGICAL DEFENSES
The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats A82-20305
Natural resistance of the organisms of seamen during postcruise rest A82-20311
The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response A82-20320
The effects of successive ionizing radiation and heat on antibody formation A82-21751
The effect of piracetam on the body's resistance to hypoxia A82-21777
The mathematics of immunity --- response to viral intrusion A82-21824

PHYSIOLOGICAL EFFECTS
Physical and physiological features of long-range flight and its impact on patients A82-19012
Enhanced heat production in physically restrained rats in hypoxia A82-19496
The influence of muscular work on the vestigial effects of cold acclimation A82-19749
Laws governing readaptation for seamen after a low-latitude cruise A82-20310
The effects of narcotic analgesics on animal sensitivity to hypoxia A82-20316
The effects of an aqueous potassium loading test on kidney function A82-20329
Effects of long-term exposure to low levels of ozone - A review A82-21676
Cardiovascular origins of heatstroke pathophysiology - An anesthetized rat model A82-21687
Changes in morphological and cytogenetic hematopoietic indicators in hamadryas baboons exposed to chronic low-level radiation A82-21726
Physiological-hygienic substantiation of admissible noise level in school rooms in a hot climate A82-21749
The ultrastructure of the liver sinusoids of mice under conditions of acute stress - Morphometric study A82-21782
The existence of an endogenous biorhythm in chromatin-positive cells of the buccal epithelium in women A82-21783
Variation in plant response to ozone: A conceptual model of physiological events [DE81-029692] N82-16701
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature [PB82-102567] N82-16737
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981 [JPRS-79346] N82-17812
Effects of ambient parameters on man N82-17826
Method of assessing individual resistance of rats to hypoxic hypoxia N82-17837
Respiratory toxicology, 1981 [AD-A107672] N82-17841
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860
Health effects of carbon monoxide and ozone [PB82-114265] N82-17866

PHYSIOLOGICAL FACTORS
Complex physiological-hygienic characteristics of a new work-rest regime for seamen A82-21748
Predicting the potentials of young swimmers based on clinical and physiological data A82-21814

PHYSIOLOGICAL RESPONSES
Effects of vasopressin administration on diuresis of water immersion in normal humans
A82-19491
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters
A82-19492
Variability of oxygen affinity of blood - Human subjects native to high altutude
A82-19493
Alterations in responses to drugs of atria from white rats acclimated to hypobaric hypoxia
A82-19497
Vestibular responses of neurons in the feline anterior suprasylvian gyrus and their interaction with responses to acoustic and facial stimuli
A82-20309
Special and clinical physiology of hypoxic states
A82-20317
Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress
A82-20322
The significance of airflow resistance to changes in responses to increasing hypercapnia
A82-20327
Parameters of the interaction of bradykinin with cardiovascular system receptors
A82-20332
Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress
A82-20335
Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit
A82-21681
Acceleration induced voltage variations in the electrocardiogram during exhaustive simulated aerial combat maneuvering
A82-21683
Adaptation to high-altitude hypoxia at different ambient temperatures /before and during adaptation/
A82-21715
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz
A82-21750
The morphology of the lungs of dogs whose movement is completely restricted
A82-21765
Features of the reaction to noise of the spinal capillaries of white rats
A82-21767
Lysosomes under conditions of stress
A82-21770
Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia
A82-21780
The effect of cholinomimetics on the development of hypothermia
A82-21781
The effects of emotional activation on the spatial synchronization of human brain biopotentials
A82-21785
Coordination of processes in the hierarchic structure of the visual analyzer
A82-21788
Types of spontaneous discharges in muscle receptors
A82-21789
Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/
A82-21825
Comparative study of several physiological parameters in the evaluation of functional condition in nurses
A82-21826
Erythrocyte indices during a competitive marathon
A82-21932
Enzymatic capacities of skeletal muscle - Effects of different types of training
A82-22248
In vitro Ca-45/++/ uptake and exchange by otoconial complexes in high and low K/+/Na/+/ fluids
A82-22249
Human auditory brainstem electric responses to binaural and monaural stimuli
N82-17861

PHYSIOLOGICAL TESTS
Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters
A82-19492
Acute experimental emotional stress in rabbits in a modulated electromagnetic field
A82-20307
Difference between eye closure and visual stabilization in the control of posture in man
A82-21686
Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise
A82-21769
The state of the vegetative functions during sleep
A82-21771
Phase V of the single-breath washout test
A82-21928

PIGEONS
Study of homing pigeons in Brazil: Some preliminary results
[INPE-2248-PRE/032] N82-17839

PILOT PERFORMANCE
The reliability of flight personnel during the operation of the Mi-4 helicopter
A82-19014
Change in the cytochemical indicators of carbohydrate metabolism in the peripheral blood neutrophils of pilots
A82-21457
A program for assessing pilot mental state in flight simulators
[AIAA PAPER 82-0257] A82-22078
Causes of fatigue among crews of civil aviation helicopters
N82-16708
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487] N82-17874

PILOT TRAINING
Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design
A82-19258
Flight simulation - The military need
A82-20529
The semi-automatic instructional system --- of B-52 weapon system trainers
A82-20539
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

PLANETARY ATMOSPHERES
Possible role of phosphine in chemical evolution
A82-20915

PLANETARY EVOLUTION
Liquid water on a planet over cosmic periods
A82-20907

PLANETARY SURFACES
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
A82-20966

PLANETOLOGY
Liquid water on a planet over cosmic periods
A82-20907

PLANT STRESS
Variation in plant response to ozone: A conceptual model of physiological events
[DE81-029692] N82-16701

PLANTS (BOTANY)
Introduction prognosis and its methodological aspects --- plant growth in new habitats
A82-21722
Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons
A82-21723

PNEUMOGRAPHY
Portable medical status and treatment system
[NASA-CR-167496] N82-17862

POLARIZATION (SPIN ALIGNMENT)
Search for effect of longitudinally polarized protons on optically active amino acids
A82-20021

POLLUTION CONTROL
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

POLYMER CHEMISTRY
Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans A82-20921
The polymerization products of alpha-aminopropionitrile - The component separation using cation-exchange resin A82-20934
POLYMERIZATION
Terrestrial evolution of polymerization of amino acids - Heat to ATP A82-20937
On the polycondensation of amino acid adenylates on montmorillonites A82-20939
Polymerization of serine guanylate in the presence of montmorillonite A82-20940
Environmental conditions for the formation of marigranules and kinetic studies on the formation --- chemical evolution of amino acids in sea medium A82-20942
POLYMERS
Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation A82-20938
POLYNUCLEOTIDES
Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis A82-20022
POLYPEPTIDES
A model for the enantiomeric enrichment of polypeptides on the primitive earth A82-20020
Secondary structures of polypeptides as evolutionary growing points A82-20962
Search for primitive replicative properties on early polypeptides A82-20963
An investigation of the biological activity of chalones separated from normal livers and from livers that are being regenerated A82-21742
POPULATION THEORY
A mathematical model of cell populations with stem cells A82-21702
PORPHYRINS
Porphyrin-like compounds genesis under simulated abiotic conditions A82-20926
PORTABLE EQUIPMENT
Portable medical status and treatment system [NASA-CR-167496] N82-17862
POSTURE
Posturography of ataxia induced by Coriolis- and Purkinje-effects A82-21684
Difference between eye closure and visual stabilization in the control of posture in man A82-21686
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713
POTABLE WATER
Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717
POTASSIUM
Radiometric determination of potassium content in athletes A82-21822
POTASSIUM CHLORIDES
The effects of an aqueous potassium loading test on kidney function A82-20329
POTENTIOMETRIC ANALYSIS
Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation A82-20938
PRECAMBRIAN PERIOD
Phylogenetic sequence of metabolic pathways in Precambrian cellular life A82-20967
Organic matter in meteorites and Precambrian rocks - Clues about the origin and development of living systems A82-21988
PREDICTION ANALYSIS TECHNIQUES
A statistical examination of three approaches for predicting motion sickness incidence A82-21685
Introduction prognosis and its methodological aspects --- plant growth in new habitats A82-21722
The dynamics of forming a prediction system in goal-directed behavior A82-21730
PRESERVING
Storage stability and improvement of intermediate moisture foods, phase 5 [NASA-CR-167503] N82-16742
PRESSURE CHAMBERS
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827
PRESSURE DISTRIBUTION
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710
PRESSURE MEASUREMENT
The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method A82-20318
PRESSURE SUITS
Regional distribution of cardiac output in unanesthetized baboons during +Gz stress with and without an anti-G suit A82-21681
PRIMITIVE EARTH ATMOSPHERE
Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres A82-20016
Amino acids derivatives synthesis from nitrogen, carbon and water by electric discharges A82-20018
A theory of the origin of life A82-20023
Comets and the photochemistry of the paleoatmosphere A82-20866
Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges A82-20912
Far UV photolysis of methane-water gaseous mixtures and the prebiotic synthesis of aldehydes A82-20913
Photolysis of CH4-NH3 mixtures and PH3 as models for the photochemical transformations on the primitive earth and Jupiter A82-20914
Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model' A82-20923
The role of analytical procedures in the formation of biochemicals from experiments simulating the chemical evolution of primeval earth A82-20927
Cyanamide mediated syntheses of leu, ala, and phe peptides under plausible primitive earth conditions A82-20931
Chemical evolution of model systems of primeval earth periphery and thermal polymerisation of aqueous solutions of cyanides A82-20933
The cold theory of the origins of life - Assumptions for the theory and experimental evidence A82-20935
The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life A82-20936
Membrane lipids and the origin of life A82-20943

Evolution of the terrestrial atmosphere and its fossils in biosystems A82-20960

Mutagens and carcinogens - Occurrence and role during chemical and biological evolution A82-20975

**PROBABILITY THEORY**

Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements [AD-A106143] N82-16739

**PROBLEM SOLVING**

Pilot workload: A survey of operational problems [AD-A107758] N82-16745

**PROGNOSIS**

The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension A82-21709

**PROPHYLAXIS**

The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension A82-21712

**PROSTAGLANDINS**

The effect of synaptically active drugs on the hyperthermic effect of prostaglandin E2 in rats A82-21741

**PROTEIN METABOLISM**

Could the biochemical metabolism be different A82-20976

Some indicators of protein metabolism in erythrocytes during radiation sickness and following cystamine injection A82-21724

Nucleic acid and protein metabolism in cardiac muscle A82-21772

The ultrastructure of the liver sinusoids of mice under conditions of acute stress - Morphometric study A82-21782

Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise A82-21927

Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714

Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors N82-17816

Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817

Rat amino acid composition after flight aboard Cosmos-1129 biosatellite N82-17831

Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite N82-17832

Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836

**PROTEIN SYNTHESIS**

Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis A82-20022

A theory of the origin of life A82-20023

Synthesis and degradation of amino acids by contact glow discharge electrolysis, a possible route for prebiotic formation of bio-organic compounds A82-20924

Genesis of amino acids in the primeval sea - Formation of amino acids from sugars and ammonia in a modified sea medium A82-20925

Factors influencing the rate of non-enzymatic activation of carboxylic and amino acids by ATP A82-20929

Cyanamide mediated syntheses of leu, ala, and phe peptides under plausible primitive earth conditions A82-20931

Terrestrial evolution of polymerization of amino acids - Heat to ATP A82-20937

Quantum mechanical conformational analysis of aminoacyladenylates - Implication in the origin of life A82-20941

Evolutionary processes of the genetic code A82-20957

Summary of evidence for an anticodonic basis for the origin of the genetic code A82-20958

Primitive transfer RNA and origin of Darwinian system A82-20959

Secondary structures of polypeptides as evolutionary growing points A82-20962

Search for primitive replicative properties on early polypeptides A82-20963

DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria A82-20970

The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2 N82-17811

Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847

**PROTEINS**

The dynamics of protein and nucleic acid content in rat raphe nucleus cells after total deprivation of sleep /in a rotating cylinder/ and selective deprivation of its paradoxical phase A82-21718

An investigation of the biological activity of chalones separated from normal livers and from livers that are being regenerated A82-21742

A study of tropomyosins in human muscular and nonmuscular organs A82-21806

**PROTHROMBIN**

The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions A82-21799

**PHOTOBIOLOGY**

A model for the enantiomeric enrichment of polypeptides on the primitive earth A82-20020

Search for effect of longitudinally polarized protons on optically active amino acids A82-20021

Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis A82-20022

A theory of the origin of life A82-20023

A neutral theory of biogenesis A82-20024

Comets and the origin of life; Proceedings of the Fifth College Park Colloquium on Chemical Evolution, University of Maryland, College Park, MD, October 29-31, 1980 A82-20853

Chemical evolution of interstellar dust - A source of prebiotic material A82-20863

Are comets connected to the origin of life A82-20865

Cometary material and the origins of life on earth A82-20867

Comets - A vehicle for panspermia A82-20868

Origin of life; Proceedings of the Third ISSOL Meeting and Sixth ICOL Meeting, Jerusalem, Israel, June 22-27, 1980 A82-20901

Interstellar molecules and the origin of life A82-20902

Clays as prebiotic photocatalysts
A82-20916
The Strecker synthesis in the primitive ocean --- chemical evolution
A82-20919
Chemical evolution of model systems of primeval earth periphery and thermal polymerization of aqueous solutions of cyanides
A82-20933
The cold theory of the origins of life - Assumptions for the theory and experimental evidence
A82-20935
The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life
A82-20936
Terrestrial evolution of polymerization of amino acids - Heat to ATP
A82-20937
On the polycondensation of amino acid adenylates on montmorillonites
A82-20939
Quantum mechanical conformational analysis of aminoacyladenylates - Implication in the origin of life
A82-20941
Environmental conditions for the formation of marigranules and kinetic studies on the formation --- chemical evolution of amino acids in sea medium
A82-20942
Membrane lipids and the origin of life
A82-20943
Competition, coexistence and irreversibility in models of early molecular evolution
A82-20951
Histidyl-histidine catalysis of glycine condensation in fluctuating clay environments
A82-20952
Primitive transfer RNA and origin of Darwinian system
A82-20959
Evolution of the terrestrial atmosphere and its fossils in biosystems
A82-20960
Organic geochemistry of the Isua supracrustals
A82-20961
Search for primitive replicative properties on early polypeptides
A82-20963
Selective acylability of amino acids by non-enzymic model reactions of biochemical transacylations
A82-20965
DNA-protein complex from an extreme halophile - A histone-like protein in archaebacteria
A82-20970
Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data
A82-20972
Mutagens and carcinogens - Occurrence and role during chemical and biological evolution
A82-20975
Could the biochemical metabolism be different
A82-20976

PSYCHOACOUSTICS
Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults
N82-17857
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860

PSYCHOLOGICAL EFFECTS
Psychological problems in the mutual adaptation of man and machine in control systems --- Russian book
A82-19000
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field
N82-17851

PSYCHOLOGICAL FACTORS
The use of linear models for EEG analysis
A82-20326

PSYCHOLOGICAL TESTS
Staying sane in space
A82-19743
Psychological testing at high altitudes
A82-21679

PSYCHOMOTOR PERFORMANCE
Causes of fatigue among crews of civil aviation helicopters
N82-16708

PSYCHOPHYSICS
Psychophysical evidence for more than two kinds of cone in dichromatic color blindness
A82-19608

PSYCHOPHYSIOLOGY
Psychological testing at high altitudes
A82-21679
Complex physiological-hygienic characteristics of a new work-rest regime for seamen
A82-21740
Comparative study of several physiological parameters in the evaluation of functional condition in nurses
A82-21826
Cerebral hemispheric activity and autonomic nervous function
N82-17868

PSYCHOTROPIC DRUGS
Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain
A82-21739

PUBLIC HEALTH
The biological effects of low-level ionizing radiation
A82-20146
The physical activity of humans as a social and biological problem
A82-21760
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

PULMONARY CIRCULATION
The effect of blood pressure in the pulmonary artery on gas exchange in functionally heterogeneous lungs
A82-21738
A comparative evaluation of the hemodynamic effects of large doses of morphine, dipidolor, pentazocine, and phentanyl
A82-21795
Air embolism - Possible role of surfactant on recompression
A82-21931

PULMONARY FUNCTIONS
Changes in microcirculatory flow with respiratory insufficiency
A82-20323
The significance of airflow resistance to changes in responses to increasing hypercapnia
A82-20327
Pulmonary shunting and its regulation
A82-21728
Pulmonary gas exchange during altered density gas breathing
A82-21935
Cardiac output increase and gas exchange at start of exercise
A82-21936

PYRIDOXINE
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

PYROLYTIC GRAPHITE
Organic geochemistry of the Isua supracrustals
A82-20961

Q

QUANTITATIVE ANALYSIS
A model for essential hypertension: Metabolic studies
N82-17867

QUANTUM MECHANICS
Quantum mechanical conformational analysis of aminoacyladenylates - Implication in the origin of life
A82-20941

R

**RABBITS**
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems
N82-16725

**RADIANT HEATING**
The thermal response of a human in the near-zone of a resonant thin-wire antenna
A82-22206

**RADIATION DOSAGE**
The biological effects of low-level ionizing radiation
A82-20146
Changes in morphological and cytogenetic hematopoietic indicators in hamadryas baboons exposed to chronic low-level radiation
A82-21726
Genetic damage in Escherichia coli K12 AB2480 by broad-spectrum near-ultraviolet radiation
A82-22200
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation
N82-16726

**RADIATION EFFECTS**
Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons
A82-21723
Changes in morphological and cytogenetic hematopoietic indicators in hamadryas baboons exposed to chronic low-level radiation
A82-21726
The effects of successive ionizing radiation and heat on antibody formation
A82-21751
USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4
[JPRS-79780] N82-17844

**RADIATION INJURIES**
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation
N82-16726

**RADIATION SICKNESS**
Some indicators of protein metabolism in erythrocytes during radiation sickness and following cystamine injection
A82-21724
The effects of elevated environmental temperature combined with radiation on the organism
A82-21752
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation
N82-16726

**RADIATION TOLERANCE**
Ultraviolet selection pressure in the Prephanerozoic --- ancient microorganism survival
A82-20969

**RADICALS**
Asymmetrical radical formation in beta-irradiated D- and L-alanines
A82-20949

**RADIO FREQUENCIES**
Current problems of radiobiology of electromagnetic radiation of radio-frequency range
N82-17850

**RADIOBIOLOGY**
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I
A82-20891
Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results
A82-20892
Ultraviolet selection pressure in the Prephanerozoic --- ancient microorganism survival
A82-20969
Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons
A82-21723
Characteristics of the relations of the primary responses of the pentose phosphate pathway to glycolysis in the bone marrow of irradiated rats
A82-21725
Changes in morphological and cytogenetic hematopoietic indicators in hamadryas baboons exposed to chronic low-level radiation
A82-21726
The effects of successive ionizing radiation and heat on antibody formation
A82-21751
The effects of elevated environmental temperature combined with radiation on the organism
A82-21752
Metabolic change in test animals as an indicator of the biological effect of an electromagnetic field having a frequency of 50 Hz
A82-21758
The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/
A82-21800
The thermal response of a human in the near-zone of a resonant thin-wire antenna
A82-22206
Current problems of radiobiology of electromagnetic radiation of radio-frequency range
N82-17850

**RADIOLYSIS**
The radiolysis and radioracemization of amino acids on silica surfaces
A82-20019

**RADIOMETERS**
Radiometric determination of potassium content in athletes
A82-21822

**RANDOM NOISE**
Mathematical model of a human operator detecting a signal on a noise background
A82-21893

**RATES (PER TIME)**
Problems in the rate of evolution in biological systems
A82-21989

**RATS**
Positions, movements and equilibrium of rats after flights aboard biosatellites
N82-16713
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
N82-16723
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia
N82-16724

**REACTION KINETICS**
Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres
A82-20016

**REACTION PRODUCTS**
The appearance of protobiopolymers and protomembranes in accordance with the 'cold theory' of the origins of life
A82-20936

**REBREATHING**
Rate of uptake of carbon monoxide at different inspired concentrations in humans
A82-21930

**RECEPTORS (PHYSIOLOGY)**
Parameters of the interaction of bradykinin with cardiovascular system receptors
A82-20332
Filtration properties of receptive fields of visual-cortex neurons
A82-21470
Rhodopsin aggregation under the damaging effects of light on the photoreceptor membranes
A82-21705
Functional characteristics of receptors connected with sustaining the flight of the roach Periplaneta Americana L
A82-21716
Types of spontaneous discharges in muscle receptors
A82-21789

REDUCTION (CHEMISTRY)
Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges
A82-20912
Photoassisted carbon dioxide reduction and formation of twoand three-carbon compounds --- prebiological photosynthesis
A82-20920
Reduction of thionucleosides - A prebiotic pathway to deoxyribonucleosides
A82-20928

REFLEXES
Summated circulatory responses of thermal and baroreflexes in humans
A82-21933
Electrode unit for testing human H reflex
N82-16728

REGENERATION (PHYSIOLOGY)
The source of reparative regeneration in skeletal muscle tissue
A82-21768
The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/
A82-21800
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae
N82-16720

RELAXATION (PHYSIOLOGY)
The temperature dependence of the kinetics of isometric myocardium relaxation
A82-19748
The dynamics of muscular relaxation following unfused tetanuses of different durations
A82-21707
Effect of calcium on the temporal characteristics of muscle contraction
A82-21708

RENAL FUNCTION
The effects of an aqueous potassium loading test on kidney function
A82-20329
A three-dimensional model for the arrangement of the vascular and tubular components of the renal osmoregulatory apparatus
A82-21745
The role of urokinase in the regulation of the fibrinolytic activity of blood under normal conditions
A82-21799

RESPIRATORY DISEASES
Changes in microcirculatory flow with respiratory insufficiency
A82-20323

RESPIRATORY PHYSIOLOGY
Breath-by-breath measurement of true alveolar gas exchange
A82-19498
Physiology and pathology of respiration and means of correcting oxygen deficiencies in an organism /Meeting of the Interdepartmental Commission on the Coordination of Studies in Medicine of the Academy of Sciences of the Ukrainian SSR and the Ministry of Health of the Ukrainian SSR/
A82-20303
Special and clinical physiology of hypoxic states
A82-20317
A combined method for the study of tissue respiration under conditions corresponding to natural gas homeostasis
A82-20321
The significance of airflow resistance to changes in responses to increasing hypercapnia
A82-20327
Respiration of brain synaptosomes under conditions of depolarization in rats deprived of paradoxal sleep
A82-20336
Pulmonary shunting and its regulation
A82-21728
The effect of blood pressure in the pulmonary artery on gas exchange in functionally heterogeneous lungs
A82-21738
The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts
A82-21801
An asymmetrical model of the airways of the dog lung
A82-21926
Phase V of the single-breath washout test
A82-21928
Pulmonary gas exchange during altered density gas breathing
A82-21935
Cardiac output increase and gas exchange at start of exercise
A82-21936

RESPIRATORY SYSTEM
The state of the vegetative functions during sleep
A82-21771
Respiratory toxicology, 1981
[AD-A107672] N82-17841

REST
Natural resistance of the organisms of seamen during postcruise rest
A82-20311

RETENTION (PSYCHOLOGY)
Ability differences and cognitive mapping skill
[AD-A106389] N82-16741

RETINAL IMAGES
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732

RHEOENCEPHALOGRAPHY
Phasic energy analysis of rheoencephalograms in the detection of the decompensation of cerebral hemodynamics
A82-21754

RHEUMATIC DISEASES
A study of tropomyosins in human muscular and nonmuscular organs
A82-21806

RHYTHM (BIOLOGY)
The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress
A82-21713
Disturbances in biological rhythms as a result of a conflict of incompatible stimuli
A82-21720
Seasonal rhythm of the immune reactivity and heart tolerance to physical load in patients with ischemic heart disease
A82-21802
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris
N82-16711
Phenomena of fluctuation of human reaction to antiorthostatic position
N82-16721
Cerebral hemispheric activity and autonomic nervous function
N82-17868

RIBONUCLEIC ACIDS
Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis
A82-20022
Origin and evolution of the genetic code
A82-20955
Evolutionary processes of the genetic code
A82-20957
Primitive transfer RNA and origin of Darwinian system
A82-20959
Nucleic acid and protein metabolism in cardiac muscle
A82-21772

RIDING QUALITY
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871

ROBOTS
Biped walking - Model problems of dynamics and control
A82-18977
Development of an integrated walking robot
A82-18988

ROTATION
Method of recording rotatory eye reflexes
N82-16727

**RUNNING**

Erythrocyte indices during a competitive marathon A82-21932

**S**

**SACCADIC EYE MOVEMENTS**

Differences in eye movement data recorded by electro-oculography and corneal reflection techniques A82-19224

Study of the electrical activity of the extraocular muscles A82-21731

**SAFETY FACTORS**

Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism A82-21717

Review of literature and regulation relating to thoracic impact tolerance and injury criteria [PB82-108697] N82-16736

**SALINITY**

Microbial life in cold saline environments A82-20974

**SALYUT SPACE STATION**

Status of space biomedical programs N82-17239

**SATELLITE CONTROL**

Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1) [NASA-TM-83826] N82-17875

**SCHIZOPHRENIA**

The use of linear models for EEG analysis A82-20326

**SCHOOLS**

Physiological-hygienic substantiation of admissible noise level in school rooms in a hot climate A82-21749

**SEEDS**

Absence of the additive effect in the combined irradiation of Crepis capillaris seeds and seedlings by gamma rays and neutrons A82-21723

**SELF ABSORPTION**

Mechanisms of cadmium absorption in rats [PB82-108184] N82-16703

**SELF ORGANIZING SYSTEMS**

Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization A82-20968

**SENSITIVITY**

Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults N82-17857

**SENSORIMOTOR PERFORMANCE**

The effect of the motor activity regime on the development, conservation, and regeneration of defensive conditioned reflexes in rats A82-20305

A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts A82-21729

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

**SENSORY FEEDBACK**

The role of biofeedback in the adaptive regulation of pathological bioelectric brain activity A82-20328

**SENSORY STIMULATION**

Disturbances in biological rhythms as a result of a conflict of incompatible stimuli A82-21720

A systems analysis of human motor reactions in various modes of operation of goal-directed behavioral acts A82-21729

**SERUMS**

The effects of daily blood sampling on creatine phosphokinase, aspartate aminotransferase and alanine aminotransferase activities in the blood serum of the monkey A82-21811

Blood serum nuclease activity in healthy persons and patients with various hematological diseases A82-21813

**SEX FACTOR**

The effect of two years' training of aerobic power and muscle strength in male and female cadets A82-21678

Characteristics and patterns of the individual development of male and female rats in the light of the energy rule of skeletal muscles A82-21721

**SHIPS**

A statistical examination of three approaches for predicting motion sickness incidence A82-21685

**SHIVERING**

Comparative neurophysiological characteristics of cold and caudate tremors A82-21790

**SIGNAL DETECTION**

Mathematical model of a human operator detecting a signal on a noise background A82-21893

**SIGNAL PROCESSING**

Functional model of the conversion of stationary signals in the auditory analyzer A82-21703

The effects of microphones and facemasks on LPC vocoder performance [AD-A107908] N82-16744

**SIGNAL TO NOISE RATIOS**

Mathematical model of a human operator detecting a signal on a noise background A82-21893

**SILICON DIOXIDE**

The radiolysis and radioracemization of amino acids on silica surfaces A82-20019

**SINE WAVES**

Acceleration measures and motion sickness incidence [AD-A107996] N82-16734

**SLEEP**

Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans A82-20315

Respiration of brain synaptosomes under conditions of depolarization in rats deprived of paradoxal sleep A82-20336

The state of the vegetative functions during sleep A82-21771

Emotions, sleep, and health A82-21804

**SLEEP DEPRIVATION**

The dynamics of protein and nucleic acid content in rat raphe nucleus cells after total deprivation of sleep /in a rotating cylinder/ and selective deprivation of its paradoxical phase A82-21718

**SOCIAL FACTORS**

The physical activity of humans as a social and biological problem A82-21760

**SODIUM**

The role of natriuresis in the prophylactic effect of adaptation to hypoxia in the case of hereditary hypertension A82-21712

**SODIUM COMPOUNDS**

Possible selective adsorption of enantiomers by Na-montmorillonite A82-20946

**SOLAR ENERGY CONVERSION**

Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization A82-20968

**SOLAR SYSTEM**

Are comets connected to the origin of life A82-20865

**SOLID ELECTRODES**
Amino acids derivatives synthesis from nitrogen, carbon and water by electric discharges
A82-20010
**SOUND LOCALIZATION**
Auditory depth perception - Localization of nonmoving and moving sound sources
A82-21727
**SOUND TRANSMISSION**
Characteristics of the structure and functions of the middle ear of lizards
A82-21823
**SOUND WAVES**
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860
**SOYUZ SPACECRAFT**
Status of space biomedical programs
N82-17239
**SPACE**
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
**SPACE FLIGHT**
Hygienic principles of ongoing monitoring of quality of recycled water during space flights
N82-16717
**SPACE FLIGHT FEEDING**
Diet of crews of three main expeditions aboard Salyut-6 orbital station
N82-17815
Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors
N82-17816
**SPACE FLIGHT STRESS**
Staying sane in space
A82-19743
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981
[JPRS-79346] N82-17812
Effect of space flights of different duration on energy metabolism of human erythrocytes
N82-17817
Human lipid metabolism during confinement in pressure chamber
N82-17822
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites
N82-17835
Blood fibrinogen as related to immersion in water for seven days and short-term space flight
N82-17836
**SPACE FLIGHT TRAINING**
Staying sane in space
A82-19743
**SPACE MANUFACTURING**
Working in space --- Book
A82-20772
**SPACE PERCEPTION**
Auditory depth perception - Localization of nonmoving and moving sound sources
A82-21727
**SPACE PROGRAMS**
Status of space biomedical programs
N82-17239
**SPACE SUITS**
Survival in space --- spacesuit development
A82-20257
Ways and means of maintaining heat balance in pilots and cosmonauts
N82-16706
**SPACEBORNE EXPERIMENTS**
Positions, movements and equilibrium of rats after flights aboard biosatellites
N82-16713
Rat amino acid composition after flight aboard Cosmos-1129 biosatellite
N82-17831
Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite
N82-17832
Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936
N82-17833
Activity of some enzymes of carbohydrate metabolism in rat skeletal muscles after space flight
N82-17834
**SPACECREWS**
Working in space --- Book
A82-20772
**SPECTRAL REFLECTANCE**
Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum
A82-21208
**SPECTRAL SENSITIVITY**
Psychophysical evidence for more than two kinds of cone in dichromatic color blindness
A82-19608
**SPEECH RECOGNITION**
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744
**SPERMATOZOA**
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
**SPINAL CORD**
Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity
A82-20330
Features of the reaction to noise of the spinal capillaries of white rats
A82-21767
Electrode unit for testing human H reflex
N82-16728
**STANDARDS**
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866
**STAPHYLOCOCCUS**
Prevention of staphylococcal infections during space flights
N82-17818
**STATIC LOADS**
Investigation of recurrent inhibition in the human spinal cord during static skeletal muscle activity
A82-20330
**STATISTICAL ANALYSIS**
Evaluation of maximal and submaximal static muscle exertions
A82-19223
**STEREOCHEMISTRY**
Resolution of underivatized amino acids by high pressure liquid chromatography, using chiral eluants
A82-20944
Stereoselective interactions of small biological molecules
A82-20945
**STOCHASTIC PROCESSES**
A neutral theory of biogenesis
A82-20024
**STORAGE STABILITY**
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742
Comparative evaluation of antimicrobial activity of some urine preservatives
N82-17830
**STREPTOMYCETES**
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris
N82-16711
**STRESS (BIOLOGY)**
Disturbances in biological rhythms as a result of a conflict of incompatible stimuli
A82-21720
The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver
A82-21732
Emotional stress as a factor in cardiovascular disorders
A82-21796
**STRESS (PHYSIOLOGY)**
Glycogen and nonspecific adaptation to cold
A82-19494
The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response
A82-20320

Microcirculation, tolerance to physical strain, and certain homeostasis parameters in patients with angina pectoris
A82-20324

Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress
A82-20335

The effect of motor activity on the development of cardiac arrhythmias in experimental emotional stress
A82-21713

Activation of the metabclism of the gamma-aminobutyric acid system in the cerebral hemispheres under various types of stress
A82-21746

Echoencephalographic indices in patients with hypertensive disease under the effect of functional loads
A82-21753

Changes in the structure and cellular composition of the inguinal lymph nodes of white rats subjected to static and dynamic stresses
A82-21761

Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise
A82-21769

Lysosomes under conditions of stress
A82-21770

The effect of the prolonged administration of sodium hydroxybutyrate on the physical work capacity and muscle tissue state of rats
A82-21779

Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia
A82-21780

The ultrastructure of the liver sinusoids of mice under conditions of acute stress - Morphometric study
A82-21782

The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress
A82-21808

Mechanisms of adaptation to ergothermic hypoxemia in athletes specializing in different sports
A82-21820

Stress and immunity in athletes
A82-21821

Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

STRESS (PSYCHOLOGY)

Staying sane in space
A82-19743

Acute experimental emotional stress in rabbits in a modulated electromagnetic field
A82-20307

The influence of adaptation on the periodic effect of hypoxia on the poststress activation of the primary immune response
A82-20320

Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress
A82-20322

Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress
A82-20335

Change in the nature of the psychotropic effect on the emotional reactivity and behavior in stress situations depending on the state of the catecholaminergic systems of the brain
A82-21739

Activation of the metabolism of the gamma-aminobutyric acid system in the cerebral hemispheres under various types of stress
A82-21746

Adaptogenic effect of mebicar during emotional stress, exercise, and hypoxia
A82-21780

EEG evaluation of mental stress
A82-21784

Emotions, sleep, and health
A82-21804

The dynamics and physiological importance of the activation of the gamma-amino-butyric acid system in the brain and cardiac muscle under pain and emotional stress
A82-21808

Acute experimental emotional stress in rabbits /physiological and cytochemical aspects/
A82-21825

STUDENTS

The effect of two years' training of aerobic power and muscle strength in male and female cadets
A82-21678

Development of an automatic data bank for managing physical education of students
A82-21816

SUGARS

Genesis of amino acids in the primeval sea - Formation of amino acids from sugars and ammonia in a modified sea medium
A82-20925

SURFACTANTS

Air embolism - Possible role of surfactant on recompression
A82-21931

SURGERY

The possibility of using mathematical methods for predicting the results of the surgical treatment of patients with vasorenal hypertension
A82-21709

SUSPENDING (MIXING)

Changes of the aggregation and orientation structure of blood in pulsating flow
A82-20333

SWEAT

Effect of blood volume on sweating rate and body fluids in exercising humans
A82-19495

SWIMMING

Predicting the potentials of young swimmers based on clinical and physiological data
A82-21814

SYMBIOSIS

The evolution of blue-greens and the origins of chloroplasts
A82-20971

Evolution of the rhodospirillaceae and mitochondria - A view based on sequence data
A82-20972

SYMPATHETIC NERVOUS SYSTEM

Functional condition of the rat sympato-adrenal system during emotional and nociceptive stress
A82-20335

The myenteric plexus - Basic principles of modeling neuronal organization
A82-20337

Human adrenosympathetic system during immersion in water
N82-17819

SYNAPSES

The effect of synaptically active drugs on the hyperthermic effect of prostaglandin E2 in rats
A82-21741

SYNCHRONISM

The effects of emotional activation on the spatial synchronization of human brain biopotentials
A82-21785

SYNCOPE

Orthostatic fluid-electrolyte and endocrine responses in fainters and nonfainters
A82-19492

SYNTHESIS (CHEMISTRY)

Abiotic organic synthesis in space
A82-20910

Formation of prebiotic precursors from model reducing atmospheres Role of hydrogen escape
A82-20911

The Strecker synthesis in the primitive ocean --- chemical evolution
A82-20919

Melanoidin polymers as possible oxygen sinks in the pre-biotic oceans
A82-20921

Abiotic synthesis of phosphoric esters of monosaccharides according to the 'cold model'
A82-20923

Porphyrin-like compounds genesis under simulated abiotic conditions
A82-20926

HCN oligomerization - Isolation and preliminary characterization of a new precursor of adenine
A82-20930

Selective acylability of amino acids by non-enzymic model reactions of biochemical transacylations
A82-20965

SYSTEMS INTEGRATION
Development of an integrated walking robot
A82-18988

SYSTEMS SIMULATION
Computer simulation as a visual aid in a video course --- for ATC system performance
A82-19248

T

TASKS
Pilot workload: A survey of operational problems [AD-A107758]
N82-16745

TECHNOLOGICAL FORECASTING
Visual technology and the future --- for flight simulators
A82-20538

TECTONICS
Chemical evolution and plate tectonics
A82-20918

TEMPERATURE DEPENDENCE
The temperature dependence of the kinetics of isometric myocardium relaxation
A82-19748

Temperature dependence of alanine and aspartate aminotransferase activities in rat brain during hypothermia of various durations and adrenalectomy
A82-21812

TEMPERATURE EFFECTS
Microbial life in cold saline environments
A82-20974

The effect of cold stress on the level and activity of microsomal cytochrome P-450 in the rat liver
A82-21732

The effect of low temperature on the activity and substrate specificity of monoamine oxidases in rat brain mitochondria
A82-21735

Effect of low-temperature on the membrane permeability of erythrocytes reconstituted in media of different ionic composition
A82-21737

The effects of elevated environmental temperature combined with radiation on the organism
A82-21752

Mechanisms of adaptation to ergothermic hypoxemia in athletes specializing in different sports
A82-21820

Effects of temperature on the duration of arousal episodes during hibernation
A82-21934

TEMPLATES
Origin of translation - The hypothesis of permanently attached adaptors --- proposed prebiotic amino acid synthesis
A82-20022

Search for primitive replicative properties on early polypeptides
A82-20963

TERRESTRIAL PLANETS
Evolution of the terrestrial atmosphere and its fossils in biosystems
A82-20960

TESTES
Effect of commercial frequency electromagnetic field on androgen function of rat tests
N82-17845

THALAMUS
The structural and functional organization of the ventrolateral nucleus of the thalamus
A82-21455

THERAPY
Physiology and pathology of respiration and means of correcting oxygen deficiencies in an organism /Meeting of the Interdepartmental Commission on the Coordination of Studies in Medicine of the Academy of Sciences of the Ukrainian SSR and the Ministry of Health of the Ukrainian SSR/
A82-20303

THERMAL ABSORPTION
The thermal response of a human in the near-zone of a resonant thin-wire antenna
A82-22206

THERMISTORS
Portable medical status and treatment system [NASA-CR-167496]
N82-17862

THERMOCHEMISTRY
Rates of fixation by lightning of carbon and nitrogen in possible primitive atmospheres
A82-20016

THERMODYNAMIC COUPLING
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
A82-20968

THERMOREGULATION
Enhanced heat production in physically restrained rats in hypoxia
A82-19496

The influence of muscular work on the vestigial effects of cold acclimation
A82-19749

Body temperature changes during the practice of g Tum-mo yoga
A82-21213

The effect of synaptically active drugs on the hyperthermic effect of prostaglandin E2 in rats
A82-21741

Ways and means of maintaining heat balance in pilots and cosmonauts
N82-16706

THIAMINE
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

THORAX
First aid for thorax traumas: Thorax drainage through suction - Report on 25 cases
A82-19016

Review of literature and regulation relating to thoracic impact tolerance and injury criteria [PB82-108697]
N82-16736

THRESHOLDS (PERCEPTION)
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

THYMUS GLAND
Clinical results on thymectomy in patients with myopathy in relation to the degree of muscular weakness
A82-21755

TIME LAG
Effect of calcium on the temporal characteristics of muscle contraction
A82-21708

TISSUES (BIOLOGY)
The measurement of oxygen and carbon dioxide partial pressures in tissues by the gas depot method
A82-20318

A combined method for the study of tissue respiration under conditions corresponding to natural gas homeostasis
A82-20321

Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. I
A82-20891

Measurement of radio frequency permittivity of biological tissues with an open-ended coaxial line. II - Experimental results
A82-20892

A mathematical model of cell populations with stem cells
A82-21702

Evaluation of safety of decompression from the critical volume of gas bubbles formed in the organism
A82-21717

Age morphofunctional characteristics of chromaffin tissue in the celiac nodes, both in the norm and with hypokinesia
A82-21766

The source of reparative regeneration in skeletal muscle tissue
A82-21768

The role of CO2 in the mechanism of the reparative regeneration of bone tissue /a radioisotopic study/
A82-21800

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia
N82-16723

Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites
N82-17835

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[NBB-UA-581-81-0] N82-17843

TITRATION
Potentiometric titration behavior of polyamino acids prepared by thermal polycondensation
A82-20938

TOLERANCES (PHYSIOLOGY)
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man
N82-17827

TOXIC HAZARDS
Respiratory toxicology, 1981
[AD-A107672] N82-17841
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

TOXICITY
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107574] N82-17840
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

TOXICOLOGY
Summary of a discussion on the problem of the 'biological norm' /in relation to an assessment of criteria of the harmfulness of chemical effects/
A82-21750

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718

Respiratory toxicology, 1981
[AD-A107672] N82-17841

TRACE ELEMENTS
Differentiation of muscles on the basis of trace-element composition
A82-21704

TRACKING (POSITION)
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist
N82-17854

TRAINING ANALYSIS
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877

TRAINING DEVICES
The semi-automatic instructional system --- of B-52 weapon system trainers
A82-20539

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

TRAINING EVALUATION
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

TRAINING SIMULATORS
Advanced aviation concepts evaluation through computer driven simulation --- human factors consideration in flight training simulator design
A82-19258

Visual technology and the future --- for flight simulators
A82-20538

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

TRANSPORT PROPERTIES
Some mechanisms of calcium transport by the cardiac sarcolemma
N82-17810

TREADMILLS
A study of treadmill exercise protocols for Chinese males
A82-21677

TREMORS
Comparative neurophysiological characteristics of cold and caudate tremors
A82-21790

TROPICAL REGIONS
Laws governing readaptation for season after a low-latitude cruise
A82-20310

Physiological-hygienic substantiation of admissible noise level in school rooms in a hot climate
A82-21749

TUMORS
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[NBB-UA-581-81-0] N82-17843

TUNING
Peculiarities of the middle ear structure in rodents as an index of the frequency tuning of their auditory system
A82-21714

Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults
N82-17857

U

U.S.S.R.
Status of space biomedical programs
N82-17239

ULTRASONIC TESTS
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation
N82-17828

ULTRAVIOLET RADIATION
Organic chemical evolution of reducing model of the atmosphere of the primitive earth - Role of UV light and electric discharges
A82-20912

Ultraviolet selection pressure in the Prephanerozoic --- ancient microorganism survival
A82-20969

ULTRAVIOLET SPECTRA
Organic and inorganic interpretations of the Martian UV-IR reflectance spectrum
A82-21208

UNSTEADY FLOW
Changes of the aggregation and orientation structure of blood in pulsating flow
A82-20333

UREAS
Increased excretion of urea and N/tau/-methylhistidine by rats and humans after a bout of exercise
A82-21927

URINE
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718

Comparative evaluation of antimicrobial activity of some urine preservatives
N82-17830

V

V/STOL AIRCRAFT
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

VAN DE GRAAFF ACCELERATORS
Asymmetrical radical formation in beta-irradiated D- and L-alanines
A82-20949

VASCULAR SYSTEM
Contractile dysfunction of vascular wall smooth muscle under emotional nociceptive stress
A82-20322

VELOCITY MEASUREMENT
In vivo recording of blood velocity profiles and studies in vitro of profile alterations induced by known stenoses [PB81-244139] N82-16738

VERBAL COMMUNICATION
Electroencephalographic correlates of the differentiation between verbal stimuli during natural night sleep in humans A82-20315

VERTICAL MOTION SIMULATORS
VTOL/STOL visual study [NASA-CR-166292] N82-17872

VERTIGO
Posturography of ataxia induced by Coriolis- and Purkinje-effects A82-21684

VESTIBULAR NYSTAGMUS
The functional condition of the ampullar apparatus in Meniere's disease A82-20308
Method of recording rotatory eye reflexes N82-16727

VESTIBULAR TESTS
Vestibular responses of neurons in the feline anterior suprasylvian gyrus and their interaction with responses to acoustic and facial stimuli A82-20309
Posturography of ataxia induced by Coriolis- and Purkinje-effects A82-21684
Noise and vibration effects on vestibular and visual functions in teenagers A82-21747
Method of recording rotatory eye reflexes N82-16727

VESTIBULES
Investigation of the otolithic membrane of the utricle of the guinea pig A82-20301
Trial on the use of stabilography in the medical supervision of boxers A82-21817
Effect of the functional properties of the vestibular analyzer on the effectiveness of instruction in gymnastics A82-21819

VIBRATION
An evaluation of helicopter noise and vibration ride qualities criteria [NASA-TM-83251] N82-17871

VIBRATION EFFECTS
The reliability of flight personnel during the operation of the Mi-4 helicopter A82-19014
Functional characteristics of receptors connected with sustaining the flight of the roach Periplaneta Americana L A82-21716
Noise and vibration effects on vestibular and visual functions in teenagers A82-21747
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

VIRUSES
The mathematics of immunity --- response to viral intrusion A82-21824

VISION
Detection of amblyopia utilizing generated retinal reflexes [NASA-CR-161944] N82-16732

VISUAL ACUITY
The prevalence of visual deficiencies among 1979 general aviation accident airmen A82-21688

VISUAL AIDS
Computer simulation as a visual aid in a video course --- for ATC system performance A82-19248

VISUAL DISCRIMINATION
VTOL/STOL visual study [NASA-CR-166292] N82-17872

VISUAL PERCEPTION
Filtration properties of receptive fields of visual-cortex neurons A82-21470
Difference between eye closure and visual stabilization in the control of posture in man A82-21686
Noise and vibration effects on vestibular and visual functions in teenagers A82-21747
Coordination of processes in the hierarchic structure of the visual analyzer A82-21788

VISUAL STIMULI
Frequency characteristics of visual evoked potentials in different regions of the human cerebral cortex A82-20314

VISUAL TASKS
Differences in eye movement data recorded by electro-oculography and corneal reflection techniques A82-19224
EEG evaluation of mental stress A82-21784

VITAMINS
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851

VOCODERS
The effects of microphones and facemasks on LPC vocoder performance [AD-A107908] N82-16744

VOLCANOES
New data on abiogenic synthesis of prebiological compounds in volcanic processes A82-20017

VOLUME
The use of oxygen as the test gas in the determination of the closing volume of respiratory ducts A82-21801

W

WALKING MACHINES
Biped walking - Model problems of dynamics and control A82-18977
Development of an integrated walking robot A82-18988

WASTE DISPOSAL
Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719

WATER
Liquid water on a planet over cosmic periods A82-20907
Microbiologically-mediated mutagenic activity of crude oil [PB82-105131] N82-16702

WATER QUALITY
Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

WATER RECLAMATION
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

WAVEGUIDES
Waveguide technique for the calibration of miniature implantable electric-field probes for use in microwave-bioeffects studies A82-20893

WEAPON SYSTEMS
The semi-automatic instructional system --- of B-52 weapon system trainers A82-20539

WEIGHTLESSNESS
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715

Status of space biomedical programs
N82-17239

WEIGHTLESSNESS SIMULATION
The effects of horizontal body casting on blood volume, drug responsiveness, and +Gz tolerance in the rhesus monkey
A82-21682
Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
N82-17820

WHITE NOISE
Neuronal-glial alterations in the cerebral cortex of animals under the influence of white noise
A82-21769
A study of the acoustic reflex as elicited by selected environmental noise stimuli
N82-17858

WORK CAPACITY
Evaluation of maximal and submaximal static muscle exertions
A82-19223
EKG description algorithm for use in clinical practice and studies of work capacity
A82-20304
Functional condition and work capacity under mountain conditions
A82-20313
Working in space --- Book
A82-20772
The effect of the prolonged administration of sodium hydroxybutyrate on the physical work capacity and muscle tissue state of rats
A82-21779
EKG evaluation of mental stress
A82-21784
Evaluation of the functional state of the cardiovascular system in patients with ischemic heart disease with reference to the nature of their occupational activity
A82-21803
Physical health of truck drivers in the open-pit mining industry of the far north
A82-21805

WORK-REST CYCLE
Complex physiological-hygienic characteristics of a new work-rest regime for seamen
A82-21748

WORKLOADS (PSYCHOPHYSIOLOGY)
Psychological problems in the mutual adaptation of man and machine in control systems --- Russian book
A82-19000
Pulse rate evaluation of the relative physiological intensity of aerobic muscular work
A82-20331
EKG evaluation of mental stress
A82-21784
A program for assessing pilot mental state in flight simulators
[AIAA PAPER 82-0257] A82-22078
Pilot workload: A survey of operational problems
[AD-A107758] N82-16745

WOUND HEALING
Dynamics of the condition of granulation tissue after injuries sustained at different times of the day
A82-21763

WRIST
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist
N82-17654

X

X RAY FLUORESCENCE
Differentiation of muscles on the basis of trace-element composition
A82-21704

Y

YOUTH
Investigation and evaluation of cardiac arrhythmias in healthy young persons
A82-21710
Predicting the potentials of young swimmers based on clinical and physiological data
A82-21814

YTTRIUM ISOTOPES
Asymmetrical radical formation in beta-irradiated D- and L-alanines
A82-20949

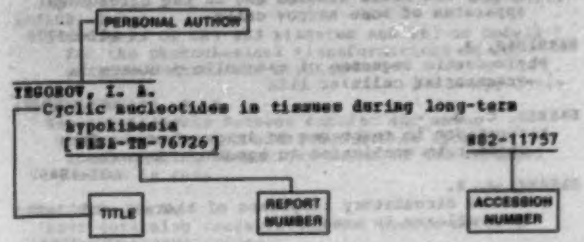
Z

ZINC
Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703

# PERSONAL AUTHOR INDEX

**AEROSPACE MEDICINE AND BIOLOGY**/*A Continuing Bibliography (Suppl. 232)* . **MAY 1982**

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABELL, P. I.

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**

Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 233)

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in May 1982 in**

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
**National Aeronautics and Space Administration**
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 387 reports, articles and other documents announced during May 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697 #** **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

# AEROSPACE MEDICINE AND BIOLOGY

## A Continuing Bibliography (Suppl. 233)

JUNE 1982

## IAA ENTRIES

**A82-22400** 1 **Respiratory regulation (Reguliatsiia dykhaniia).** I. S. Breslav and V. D. Glebovskii. Leningrad, Izdatel'stvo Nauka, 1981. 280 p. 1140 refs. In Russian.

The mechanism of respiratory regulation is considered: the central and peripheral organs which play a part in the respiration process are described, including the respiratory muscles and their related efferent tracts and the bulbar respiratory neural centers. The functions of the receptors, responsible for the regulation of breathing are described in detail: the mechanoreceptors of the lungs and the respiratory tracts as well as the arterial and medullary chemoreceptors. Modern theories on the self-regulation of the rate and depth of breathing and/or the regulation of pulmonary ventilation under muscular activity and additional resistance to breathing are presented. Particular attention is given to the human respiratory system, and clinical cases of the mechanisms are cited. J.F.

**A82-22435** **Microwave and radio-frequency exposure limits.** F. Harlen (National Radiographical Protection Board, Didcot, Oxon, England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews*, vol. 128, pt. A, no. 9, Dec. 1981, p. 589-592. 16 refs.

The paper summarizes the exposure limits that have been promulgated by national organizations of different countries, and the rationales that have been advanced for establishing these limits. The limits differ by orders of magnitude, largely because of different philosophical approaches to standard making. The limits were developed, in the first instance, because of concern about high-power radar equipment, but have gradually been extended to cover very much lower frequencies. New standards are being developed in the USA which are much more restrictive as regards RF exposure. The justification for these is examined. (Author)

**A82-22901** **Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.** Edited by G. E. Corrick, E. C. Haseltine, and R. T. Durst, Jr. Santa Monica, CA, Human Factors Society, Inc., 1980. 694 p. Members, $15.; nonmembers, $20.

Progress in human factors engineering, design, and research were covered in topics such as aircraft displays, anthropometry, automation, control design, and situations which demand decision making and problem solving. Attention was also given to human-computer interfaces, designing for the handicapped, for nuclear power plants, for eye safety, and for driver performance and safety. Flight skill maintenance and human-computer communication were discussed, as were space systems involving the Shuttle, effects of living environments, workload studies, and perception and attention studies. Performance evaluation was reviewed, along with the effects of heat stress on human performance, applications of crew station simulation, task taxonomies, the research philosophy of human factors studies, and signal detection. Finally, target acquisition was investigated, and studies of testing and evaluation, training, stress, and visual performance were presented. M.S.K.

**A82-22903** **Findings from a study of tactical symbology for fighter aircraft displays.** C. J. Kopala (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 9-12.

Pilot flight performance and symbol recognition performance using a proposed symbology set for a fighter aircraft real-time combat situation display were measured. Significant performance differences attributed to the individual symbol types (aircraft, surface-to-air missiles, and anti-aircraft artillery) and symbol states (hostile, unknown, and friendly) are discussed. (Author)

**A82-22904** **A case for early objective evaluation of candidate display formats.** S. Herron (Bunker Ramo Corp., Electronic Systems Div., Dayton, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 13-16. Contract No. F33615-78-C-3814.

The development and subsequent evaluation of a candidate head-up display (HUD) symbology set is described as an example of the importance of early evaluation of a candidate display format. HUD allows the pilot to view the outside scene while flying an approach or firing a weapon with little or no reference to other instrumentation. The establishment of standardized HUD symbology for all flight modes is considered essential to enable a pilot to shift orientations to different demanding scenarios such as air-to-air to air-to-ground combat situations rapidly. Eighteen A-7D pilots were employed to test simulations with A-7 HUD displays and the standardized format displays. After two trials with reconfigured HUD symbology, favorable pilot opinions of the proposed HUD symbols were garnered with poor performance results, indicating that further symbology development is required. M.S.K.

**A82-22906** * # **What do pilots see in displays.** R. L. Harris, Sr. and D. M. Christhilf (NASA, Langley Research Center, Hampton, VA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 22-26. Abridged.

Based on pilots' scanning data and discussions with pilots, general aviation flight instruments have been classified into three categories. The classification is related to the type of information presented, the way the information is used, and the pilot's role as a monitor and controller. Suggestions are made for modifying the instruments of one category to improve the information displayed such that when monitoring, the pilot can more quickly extract the information needed. (Author)

**A82-22907** **A strength and anthropometric comparison of young men and women.** W. W. Hosler (U.S. Army, Electronic Proving Ground, Sierra Vista, AZ) and J. R. Morrow (Houston, University, Houston, TX). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 31-33. 14 refs.

Isokinetic strength and anthropometric differences between men and women were examined for applications in work station design. Randomly selected groups of 85 college students were tested for arm and leg strength in maximal and submaximal trials, and variables such as sitting height, arm length, biacromial diameter, biiliac diameter, three skinfolds, age, and body fat percentages were recorded. Men were found to have a greater lean body mass and less body fat, while anthropometric variables such as shoulder and hip diameter were less significant. Due to the larger isokinetic body strengths displayed by males, it is recommended that women benefit from the technology of force transducers, such as those required for rapidly removing themselves from emergency situations. Men were also found to be more suited for moving objects and themselves. M.S.K.

A82-22908 **Evaluating operator performance on automated tactical systems.** C. W. Howard and B. H. Taylor (U.S. Army, Research Institute for the Behavioral and Social Sciences, El Paso, TX). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 41-43.

The U.S. Army's Patriot missile system features many advanced automated capabilities. The sophistication of this system raises the possibility that human intervention will actually degrade its performance. Efforts are underway to develop a performance measure that may be used to gauge these effects. A tentative measure has been derived and is currently being validated and refined. Present and future applications for such a metric are discussed. (Author)

A82-22909 **Mini-remotely piloted vehicle precision tracking evaluation.** D. C. Fulkerson, M. L. Hershberger, and L. A. Scanlan (Hughes Aircraft Co., El Segundo, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 44-48. Grant No. DAAB07-78-C-2415.

The research reported assessed the ability of a human operator to manually null the residual pointing errors that remain on the output of an automatic target tracker under conditions of data link bandwidth reduction. Three operator performance evaluations were conducted using a hybrid computer simulation of the mini-RPV system. The first study assessed the ability of an operator to null the residual errors using a baseline system design. In the study, 32 combinations of environmental and display factors were examined to determine their impact on pointing accuracy. In no case did the average performance reach the 50 microradian standard deviation criterion. The remaining two studies evaluated candidate modifications to the mini-RPV system which would be expected to improve overall tracking performance. Based on these studies, a modified system was identified which allowed criterion tracking accuracy while yielding a 32-to-1 reduction in the data link bandwidth. (Author)

A82-22910 **Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems.** R. Eberts and W. Schneider (Illinois, University, Urbana, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 59-62. 8 refs.

The design of computer generated displays which allow an operator to respond to higher than second order control system requirements without conscious control reasoning is discussed. Displays are intended to relate appropriate symbology for an intuitive grasp of the situation, with the resultant response coming automatically from thorough training which supplied an unconsciously operating skill. A consistent response to control stimuli is necessary, with time representations changing with the number of dimensions which are to be controlled. The development and implementation of forward-backward display with velocity cues involves the establishment of an internal model within the operator. Factors which have inhibited the development of effective predictor displays are the lack of necessary algorithms, too many unpredictable variables in the flight of a vehicle, and the presence of overly complex and unpredictable environments for some aircraft. M.S.K.

A82-22911 **Computer simulations for fault diagnosis training - From simulation to live system performance.** W. B. Johnson and W. B. Rouse (Illinois, University, Urbana, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 69-73. 10 refs. Contract No. MDA903-79-C-0421.

Three methods of training for fault diagnosis were studied: traditional instruction, context-specific computer simulations, and context-free simulations. Each of thirty-six powerplant maintenance trainees were trained with one of these methods, and then, transferred to real aircraft powerplants and, later, to simulations of an auto-pilot system. For the aircraft powerplants, it was found that traditional instruction was only superior if explicit demonstrations were provided for the exact failures to be encountered. With respect to overall performance, context-free training did not produce improved performance on the unfamiliar auto-pilot system. Considering correlates of live system performance, it was found that performance in the context-free simulation was a good predictor, while performance in the context-specific simulations was by no means useful. Trainee Grade Point Averages and scores on traditional quizzes were also highly correlated with live system performance. (Author)

A82-22912 **Design criteria for decision aids - The users perspective.** R. R. Mackie (Human Factors Research, Inc., Goleta, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p.80-84. 8 refs.

The opinions of over 200 Navy personnel serving aboard ASW aircraft, surface ships and submarines were solicited to identify factors that will influence acceptance and use of a wide variety of computer-generated decision aids designed to assist mission planning, search procedures, target detection, classification, localization, and attack. User concerns about the design and use of decision aids are described and some recommendations for addressing those concerns are made. (Author)

A82-22913 **Low-level laser light effects - Long-term effects.** H. Zwick, B. E. Stuck, and E. S. Beatrice (U.S. Army, Letterman Army Institute of Research, Presidio of San Francisco, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 152-156. 13 refs.

Attempts to correlate ultrastructural alterations with function changes are described for tests involving the exposure of behaviorally trained Rhesus monkeys to low-level laser light. Two optically undamaged monkeys were secured in a box with their heads positioned to view rear-projected Landolt and gapless rings at various wavelengths to determine log threshold background intensities required for the discrimination of specific acuity criterion at each wavelength. Each animal received a total of 38 hr exposure, and depressed photopic function was observed with prolonged, repetitive viewing of laser light at 514.5 nm. The performance decrement was found to be possibly cumulative, from evidence of lessened acuity between the end of one test and the beginning of another. Caution is advised, along with frequency surveillance of visual function, in any situation requiring exposure to repetitive low-level laser light. M.S.K.

A82-22914 **Changes in spectral acuity following laser irradiation.** D. O. Robbins, H. Zwick, and M. Haenlein (Ohio Wesleyan University, Delaware, OH; U.S. Army, Letterman Army Institute of Research, Presidio of San Francisco, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 162-166. 5 refs.

Measurements of the immediate recovery of visual acuity and the long-term consequences of repeated exposures to HeNe, Kr, and A laser light at low levels are reported from tests with Rhesus monkeys. Beam diameters between 150-323 microns were shone on the corneas of monkeys whose heads were held in a fixed position, with power levels of 0.3-11 mW at the cornea. The recovery of acuity was measured with both achromatic and chromatic backgrounds for Landolt rings immediately after exposure. Failure to regain acuity resulted in a removal from exposure and continuous monitoring of spectral and white light acuity. Effects were found to be dependent on the wavelength of the laser source, and all subjects showed degradation of acuity in the short wavelength regions two months after the tests. It is suggested that specific spectral lines of coherent light at low levels selectively alter specific foveal cone processes. M.S.K.

**A82-22915** **Flying skill maintenance.** E. E. Eddowes, J. C. DeMaio (USAF, Human Resources Laboratory, Williams AFB, AZ), J. L. Eubanks, D. R. Lyon, T. H. Killion, and R. T. Nullmeyer (Dayton, University, Dayton, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 167, 168.

The results of tests with fighter pilots and bomber crews to determine the skills required for combat tasks and the levels of training to maintain those skills are reported. The fighter pilot skills were found to be planning, information processing, discriminating, anticipating, deciding, controlling, concentrating, remembering, and integrating during air-to-surface, air-to-air, and tactical formation tasks. Strategic bombing skills have been focussed on low-level bombing runs, with specific attention to the tasks of the radar navigator and the electronic warfare officer. Additional data have been gathered for Commander and Copilot performance in landing and inflight fueling operations. The results of the subjective and objective tests are being used to prepare training simulator programs for minicomputers and as testing data for separating skilled from less skilled pilots. M.S.K.

**A82-22916** **Voice entry for reducing pilot workload.** S. J. Mountford and R. A. North (Honeywell Systems and Research Center, Minneapolis, MN). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 185-188.

An experiment was conducted to assess the potential improvement in operator performance when data entry is performed by voice input over keyboard input. In a workload condition simulating manual/visual time sharing of two tasks (tracking and radio channel changing) performance on both tasks are significantly improved when operators switched to voice input for the data entry task. Results are discussed in light of the potential of voice recognition systems for the future fighter cockpit. (Author)

**A82-22918 *** **The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation.** T. E. Loughead and E. C. Pruett (Essex Corp., Huntsville, AL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 205-208. Contract No. NAS8-32989.

The implementation of NASA's Space Transportation System (STS) presents the opportunity for the on-orbit assembly of structures which, before the advent of multi-launch missions, were not possible because of their physical size. This report presents the results of an eight-month effort in the investigation of assembly techniques and hardware configurations used in assembly of the basic tetrahedral cell by A7LB pressure-suited subjects in Marshall Space Flight Center's Neutral Buoyancy Simulator. Eleven subjects participated in assembly procedures which investigated two types of structural members and two configurations of attachment hardware. The assembly was accomplished through extra-vehicular activity (EVA) only, EVA with simulated manned maneuvering unit (MMU), and EVA with simulated MMU and simulated remote manipulator system (RMS). Assembly times as low as 10.20 minutes per tetrahedron were achieved. (Author)

**A82-22921** **The effects of noise - A review.** V. J. Gawron (Illiana Aviation Sciences, Ltd., Las Cruces, NM). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 233-237. 41 refs. NSF Grant No. DAR-78-12722.

Research on the effects of noise on human performance is reviewed. Instructing subjects of the favorable, unfavorable, or lack of effect by noise has been shown to not affect the level of performance, while high levels of noise have been observed to cause a degradation in the repetition of digits or syllables. The performance of complex tasks involving either mental agility, skill, speed, complex psychomotor activity, or a high level of perceptual capacity was found to degrade in the presence of noise while simple tasks did not. The effects of noise on the complex tasks was found to display a continuous lowering of performance, and no correlations with sound intensity have been found. Results have been contradictory, and the employment of multivariate analyses is recommended as a means to achieve a compromise among contending conclusions. M.S.K.

**A82-22922** **The measurement of aircrew task loading during operational flights.** D. Gunning (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 249-252. 6 refs.

In-flight observers collected task loading data during four operational flights of the Air Force's KC-135 tanker aircraft. The data were collected via a Datamyte Data Recorder which the observers used to record the occurrences of 45 different tasks performed by the pilot, copilot, and navigator. Examples of the task loading data are presented including workload profiles for each crewmember, peak workload situations, and usage data for individual aircraft systems. (Author)

**A82-22923** **The structure of processing resources - Implications for task configuration and workload.** C. Wickens, W. Derrick, D. Berringer, and J. Micalizzi (Illinois, University, Champaign, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 253-256. 7 refs. Contract No. N00014-79-C-0658.

A series of experiments to validate a three-dimensional model of processing resources are outlined. The model comprises processing stages, which include perceptual and central processing as opposed to response selection and execution, processing modalities, which are visual inputs and manual responses as opposed to auditory inputs and vocal response, and processing codes, which consider verbal as opposed to spatial modes. Subjects were exposed to trials of selected symbols which were or were not included in a previously observed set, and which were manipulated for orthogonal position on the screen, in accordance with principles of Sternberg tasks. The trials were run in tracking, failure detection, and understanding and incorporating verbal and spatial configurations, which were displayed as words and altitude figures. Further performance of the trials to test the applicability to task interferences effects and workload variance is indicated. M.S.K.

**A82-22924 *** **Instrument scan - Is it an indicator of the pilot's workload.** A. R. Ephrath, J. R. Tole, A. T. Stephens, and L. R. Young (MIT, Cambridge, MA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 257, 258. Grant No. NCC1-23.

Results of an investigation of the relationship between an aircraft pilot's visual scanning of instruments and the level of mental activity during a simulated approach and landing are presented. Noting that periods of activity which demand either close to 100% of human capacity or low levels of capacity are the times when most errors are committed, trials were conducted with three NASA test pilots in a terminal configured vehicle simulator. The pilots flew a normal approach while verbally responding to three digit stimuli to be judged plus or minus according to an order of magnitude scheme, and also while using a control stick to extinguish a light that came on and off to the right and left of the instrument panel. Eyescans of the instrumentation were monitored, and determinations were made of the most common instruments used during approach and flare. Fixation on instruments was found to increase with the arithmetic tasks. M.S.K.

**A82-22925** **On the training of the sharing skills - An attention viewpoint.** D. Gopher (Technion - Israel Institute of Technology, Haifa, Israel). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 259-263. 15 refs. USAF-supported research.

Training of time-sharing skills is discussed within an attention framework in which poor time-sharing performance is interpreted to stem from scarcity or inefficient utilization of processing resources. Practice is argued to increase resource availability either by reducing the resource demands of each task, improving coordination, or enhancing the voluntary control on resource allocation. Based on this analysis notions of skill generalizations and implications for the development of training procedures are examined. (Author)

**A82-22926** **Flight simulator runway visual textural cues for landing.** G. H. Buckland (USAF, Human Resources Laboratory, Williams AFB, AZ). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 286, 287.

The effect of visual textural patterns superimposed upon the runway touch-down zone area was studied as a potential factor in excessive vertical velocity at touchdown during flight simulation. Six simulated daytime runways with varying degrees of textural cues, as well as one night runway scene were used. The average vertical velocities at touchdown were higher in the simulator than comparable test landings in actual aircraft, but the textural cues did produce statistically significant differences in simulated vertical velocities at touchdown. Apparently the texture patterns did help to improve pilot performance, but they were not sufficient by themselves to completely solve the problem of excessive vertical velocities at touchdown. (Author)

**A82-22927** **The effect of inter-stimulus intervals on the perception of short flashes of red and green light.** R. P. Bateman (Texas A & M University, College Station, TX). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 288-291. 11 refs.

The purpose of this investigation was to determine whether or not human perception of two equal flashes of colored light is a function of the interstimulus interval. Thirty subjects with normal color vision were presented with two 5 ms flashes of light, the first at 697 nm (red) and the second at 565 nm (green). The interstimulus interval was varied from 5 to 100 ms. When the interval was less than 30 ms, subjects reported seeing yellow flash. From 30 to 50 ms, subjects reported seeing only a green flash. Above 50 ms, subjects were able to identify two flashes, one red and one green. These results constitute a contradiction of Bloch's Law, which states that for interstimulus intervals less than 70 ms, stimuli are summed to produce perception. The implications of these results on a model for human color vision are discussed. (Author)

**A82-22928** * **The event-related brain potential as an index of attention allocation in complex displays.** C. D. Wickens, E. F. Heffley, A. F. Kramer, and E. Donchin (Illinois, University, Champaign, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 297-301. 10 refs. Contracts No. N00014-76-C-0002; No. F49620-79-C-0233; No. JPL-955610.

The advantages of employing the event-related brain potential (ERP) in the assessment of allocation of attention in dynamic environments are discussed. Three experiments are presented in which the P300 component of the ERP is demonstrated to be a useful index of subjects' locus of attention. The first two experiments were concerned with the allocation of attention during discrete and continuous visual monitoring tasks. The results indicated that a P300 was elicited only by stimuli to which the subject had to attend in order to perform successfully the task. The third experiment was conducted to assess the sensitivity of P300 to the manner in which attention is allocated to different aspects of a display during the performance of a 3-dimensional target acquisition task. The amplitude of the P300 was found to reflect differences between two levels of workload, as well as the task relevance of the stimuli. The results of the experiments are discussed in terms of their utility in the evaluation of the design of man-machine systems as well as in the study of the allocation of attention in operational environments. (Author)

**A82-22929** **The effects of age and ametropia on the dark focus of visual accommodation.** N. M. Simonelli (3M Co., Copying Products Div., St. Paul, MN). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 312-316. 11 refs. Contract No. F49620-77-C-0117.

The effects of age and ametropia on the dark focus of visual accommodation have gone largely unmeasured. Subject populations of young people are generally screened and their vision 'standardized' by testing them while they wear corrective lenses. In this study, 301 participants of both sexes, age 17 to 67, both nearsighted and farsighted were measured for their near points, far points, and dark focuses. It was found that the more nearsighted the eye the larger the dark focus shift. This increase in shifts, however, is relatively small over the commonly found range of ametropia. Age was also found to have a small effect on the dark focus. Older individuals tended to have a smaller dark focus shift, and the dark focus was found to recede with age at roughly the same rate as the far point. (Author)

**A82-22930** **Selection of Performance Evaluation Tests for Environmental Research.** R. C. Carter, R. S. Kennedy, and A. C. Bittner, Jr. (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 320-324. 17 refs. Navy Project MF58-524-002.

A study of various measures of human performance has been carried out in order to select Performance Evaluation Tests for Environmental Research (PETER) suitable for use in repeated measurements. Sources of tests which have been considered for PETER are examined together with plans for the selection of additional tests. Tests in the source batteries, including those that have and those that have not yet been considered for inclusion in PETER, are listed, and their performance contents are discussed. V.L.

**A82-22931** **The validity of task analytic information to human performance research in unusual environments.** R. H. Shannon (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 325-329. 10 refs.

Recurring naval student flight errors were collected using three types of task analytic methodologies: maneuver description questionnaires, critical incident technique of observed student problems and inflight maneuver rating forms. The results from these three efforts were highly correlated, which indicated that the task analytic methodology was valid; and therefore, would have utility in the future development of a performance battery for environmental research. (Author)

**A82-22932** **Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task.** D. B. McCafferty (West Florida, University, Pensacola, FL), A. C. Bittner, Jr., and R. C. Carter (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 330-334. 14 refs. Navy Project MF58-524-002.

The objective of the study was to determine whether baseline performance on the auditory digit span task would stabilize following repeated administration of both forward and backward digit span. The backward digit span scores became more and more correlated with the forward digit span scores as the experiment progressed, which indicated that the mental content of the two tests of memory converged with practice. The forward portion of the auditory digit span task was found to be suitable for use in environmental research employing repeated measures and was recommended for inclusion in a test battery as a measure of inattention or freedom from distraction and as an indicator of short-term memory or neurophysiological impairment. V.L.

**A82-22933** **Performance evaluation tests for environmental research /PETER/ - Landolt C reading test.** J. C. Guignard, A. V. Bittner, Jr., S. W. Einbender, and R. S. Kennedy (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 335-339. 22 refs. Navy Project MF58-524-002.

A Landolt C visual acuity test was evaluated for inclusion in a battery of Performance Evaluation Test for Environmental Research (PETER) for use in repeated measures experiments. Eight subjects were tested for 12 days to determine stability of means, standard deviations and cross-day correlations. Mixed results for these cross-day correlation analyses made questionable the stability of speed and error measures. Fine-structure analyses indicated that the task was more a measure of response accuracy than acuity. Fine-structure analyses in future performance test evaluation and exploration of 2 alternative visual acuity tests are recommended. It is concluded that the Landolt C test in the form used is not stable and cannot be recommended as a test of visual acuity for inclusion in PETER. (Author)

**A82-22934** **Item recognition as a Performance Evaluation Test for Environmental Research.** R. C. Carter, R. S. Kennedy, A. C. Bittner, Jr., and M. Krause (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 340-343. 16 refs.

Item Recognition (Sternberg, 1966) is a task which reflects the operation of human memory. This task was considered as a candidate for use in a battery of Performance Evaluation Tests for Environmental Research (PETER). Environmental research involves comparison of performances in a baseline environment and in a novel environment. It is desirable that scores be stable at different occasions in the baseline environment, so that changes due to the novel environment will be clear if they occur. It was found that item recognition results were similar to those obtained by other investigations, although the traditional item recognition score (slope) was unreliable across repeated measurements. The response time (RT) was stable for each of the four memory set sizes (1, 2, 3 and 4 items), from the standpoint of reliability, after the fourth session. (Author)

**A82-22935** **A catalogue of Performance Evaluation Tests for Environmental Research.** R. S. Kennedy, R. C. Carter, and A. C. Bittner, Jr. (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 344-348. 30 refs.

The stability and other characteristics of 15 performance tasks investigated as part of the Performance Evaluation Tests for Environmental Research program are examined. Progress is also reported on 45 additional tests which are being studied. All tasks exhibit stable means and variances after adequate practice. However, less than 30% meet minimal stability criteria for intertrial correlations, and substantial practice (typically more than an hour over five days) is required to achieve stability. V.L.

**A82-22936** **Comparison of memory tests for environmental research.** M. M. Harbeson, M. Krause, and R. S. Kennedy (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 349-353. 6 refs.

Four memory tests were considered for inclusion in a human performance test battery. The tests were administered to 23 Navy enlisted men for 15 consecutive days. Group means, standard deviations, and cross-session correlations were examined. Two of the tests, Interference Susceptibility and Free Recall, met the initial statistical criteria for inclusion in the test battery. However, the other tests, Running Recognition and List Differentiation failed to show sufficient task definition and reliability in their present form. These tests are compared with each other and with previous memory research studies. (Author)

**A82-22937** **Task analytic approach to human performance battery development.** R. H. Shannon (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 364-368. 10 refs.

Task analytic methods were used to isolate critical components of naval student flight performance. This goal was accomplished by utilizing factor and regression analyses to compare student maneuver errors during primary training to the overall phase grades of primary, basic and advanced. The results indicated that flight ability skills appear to be best measured by basic transitions, coordination flying and entries to dirty configurations. These items could be measured within a flight simulator. In a laboratory, these skills could best be measured by a performance battery which contained memory, problem-solving, continuous tracking tasks, and a time-sharing capability between continuous tracking and discrete tasks. In conclusion, the task analytic procedure was determined to be a feasible and useful undertaking in the development of performance measurement systems such as the PETER project. (Author)

**A82-22938** **Convergence-divergence with extended practice - Three applications.** M. B. Jones (Pennsylvania State University, Hershey, PA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 359-362. 18 refs.

It has been recognized that practicing a task might alter its correlation with an external measure. When the correlation increases, the task is said to converge on the external measure; if it decreases, the task diverges from the external measure. The implications of convergence-divergence with extended practice are discussed with reference to differential retention over long periods of no practice, personnel selection and classification, and the identification of latent scores. V.L.

**A82-22939** **Mental performance impairment in heat stress.** P. A. Hancock (Illinois, University, Urbana, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 363-366. 20 refs.

Data in the literature on the relationship between threshold for unimpaired mental performance and heat stress, and in particular the conclusions of Wing (1965), are re-evaluated in the light of more recent research. It is suggested that heat induced mental performance decrement is a function of imminent thermophysiological collapse and occurs at a much higher level of heat stress than Wing has proposed. It is pointed out, however, that although mental performance decrement before impending physiological collapse is slight, most control situations require constituents of motor performance more susceptible to heat. V.L.

**A82-22940** **Perception and performance in the heat.** M. Y. Beshir and J. D. Ramsey (Texas Tech University, Lubbock, TX). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 367-371. 8 refs.

This study reports an evaluation of the effects of heat exposure on human subject's abilities to estimate their physiological responses, perceptual-motor performance and thermal comfort. The differences between male and female subjective estimates of the effects of heat on drowsiness, boredom, and fatigue are also reported. (Author)

**A82-22941** **Application of a predictive core temperature model to heat stress experimentation.** R. E. Schlegel (Oklahoma, University, Norman, OK). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 377-381. 8 refs.

An interactive procedure for evaluating and maintaining an individual's core temperature at a predetermined level was developed and tested. The procedure involved the use of previously developed models for predicting core temperature changes during work and rest. Various levels of metabolic activity were used for rapid core temperature elevation and adjustments in dry-bulb temperature and relative humidity maintained the desired core temperature level. Evaluation of the procedure was made using five female subjects at four different levels of elevation. Results are presented which show the accuracy of the control. (Author)

**A82-22942** **Core temperature, heart rate and sweatsuits.** M. W. Riley, D. J. Cochran, and J. W. Armstrong (Nebraska, University, Lincoln, NE). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.

Santa Monica, CA, Human Factors Society, Inc., 1980, p. 382-385. 6 refs.

Core temperature and heart rate are recorded for three male subjects, while jogging on a treadmill, to determine the influence of sweatsuits. Three trials were run and at each trial the subjects wore gym shorts and T-shirt, cotton sweat clothes, or vinyl sweat clothes. Results indicated the greatest physiological cost was required while exercising in vinyl sweat clothes and there was a significant difference in physiological cost due to the apparel worn. (Author)

**A82-22943** **An application of manned simulation in crew station conceptual development.** J. A. Fitzgerald, J. A. Wise, R. E. Rutkowski, and P. D. Biolchini (McDonnell Douglas Corp., St. Louis, MO). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 386-389.

The McDonnell Aircraft Company's Manned Air Combat Simulator is being used in the early design and evaluation phases of an advanced real-time reconnaissance aircraft. The cockpit arrangement and control logic have been implemented in the engineering development simulator. To date there have been two formal human factors evaluations of the system under simulated operational conditions. This presentation outlines the procedures used, the results, and their impact upon the design. (Author)

**A82-22944** **Application of preference tree methodology to choice behavior in a AAA supervisory control task.** C. Hale (Systems Research Laboratories, Inc., Dayton, OH) and S. Ward (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 400-404. 7 refs.

A study has been carried out to investigate the applicability of the elimination-by-aspects (EBA) model proposed by Tverski (1972) to situations involving active search for sequentially available information of varying value. Subjects were told to select the most appropriate one of three possible operating modes in a task designed to simulate supervisory decision making in an anti-aircraft artillery system. The results obtained in the experiment indicate that subjects search the information set in a compensatory manner, which contradicts the EBA model. Consideration of the various aspects of the experiment suggests that the EBA model is valid only in situations where the subject is faced with many alternatives following receipt of a complete information set. V.L.

**A82-22945** **Map interpretation and geographic orientation during nap-of-the-earth flight.** S. P. Rogers (Anacapa Sciences, Inc., Santa Barbara, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 414, 415.

A series of studies have been conducted to evaluate aviator's precision of geographic orientation during photographically simulated nap-of-the-earth (NOE) flight in unfamiliar areas. The findings of these studies suggest that if a topographic display is to be acceptable and useful to the average aviator, it must include more information than terrain relief alone. However, since many potential battlefields do not include cultural, hydrographic, or vegetation features useful in geographic orientation, additional training in terrain-relief analysis and contour line interpretation would greatly benefit NOE aviators. V.L.

**A82-22946** **Task taxonomies and modeling for system performance prediction.** G. L. Berry (Ohio State University, Columbus, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 425-429. 9 refs.

An approach is suggested for developing a systematic method of analyzing human machine systems and for formulating a task-oriented model from the analysis results. The role of task taxonomies in systematic analysis is examined. Digital simulation of task-oriented networks is shown to be a useful technique for predicting performance characteristics of human machine systems. The process of task analysis is used to abstract a task-oriented description from an actual system. Task analyses are based, either implicitly or explicitly, on a 'view of the world' or task taxonomy. To the extent that the task taxonomy is explicitly defined and used, the task analysis is objective, repeatable, and complete. It is concluded that further research needs to be done to examine available taxonomies and determine which produce the best results or under which conditions certain taxonomies might be used. B.J.

**A82-22947** **The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems.** J. M. Reising (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH) and P. R. Krishnaiah (Pittsburgh, University, Pittsburgh, PA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 453-457. 5 refs. Grant No. AF-AFOSR-77-3239.

In complex human-machine systems, multidimensional behavior is required of the operator. Consequently, there is no commonly-accepted, single measure of operator performance which can be utilized to determine the efficiency of the human-machine interaction. Because the behavior is multidimensional, multivariate statistics must be used to analyze the multiple measures gathered during system evaluation. While multivariate analogues to analysis of variance (ANOVA) exist, there are also a number of candidate multivariate analogues to the post-ANOVA simultaneous comparison tests. This paper describes a newly developed multivariate, simultaneous comparison test - Finite Intersection Test (FIT) - and provides an example of FIT's application to the analysis of multivariate data. (Author)

**A82-22948** **An integrated approach to pilot performance evaluation.** R. L. Hockenberger and J. M. Childs (Seville Research Corp., Pensacola, FL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October, 13-17, 1980, Proceedings.
Santa Monica, CA, Human Factors Society, Inc., 1980, p. 462-465.

The issue of norm- versus criterion-referenced evaluation methods is discussed in the context of undergraduate pilot training, and an approach that integrates both methods is described. It is suggested that such an integrated approach would facilitate advanced training management concepts such as proficiency advancement, but would not pose significant user acceptance difficulties. (Author)

**A82-22949** **Legibility of smoke-obscured emergency exit signs.** P. G. Rasmussen, B. P. Chesterfield, and D. L. Lowrey (FAA, Civil Aeromedical Institute, Oklahoma City, OK). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 476-479. 10 refs.

Internally self-illuminated emergency exit signs were investigated to determine the effects of size and background luminance levels on overcoming the visual degradation resulting from the presence of smoke in the visual environment. The results indicate that increased size and background luminance levels can be effective, though inefficient, methods for improving legibility in the presence of dense smoke. (Author)

**A82-22950** **Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI.** T. Blake (California State University, Northridge, CA) and J. C. Baird (Dartmouth College, Hanover, NH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 492-496.

An analysis of some key human factors aspects of NASA's SETI (Search for Extraterrestrial Intelligence) program is presented. The results of some preliminary studies in human discrimination and recognition of patterns embedded in gaussian noise fields where the nature of the signal is unknown are discussed. A strategy for employing human pattern recognition capabilities in the SETI context, or in similar applications where signal attributes cannot be determined apriori, is offered. (Author)

**A82-22951** **Bivariate response distributions in visual detection and discrimination.** L. A. Olzak (California, University, Los Angeles, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 502-506. 5 refs.

Two patterns can sometimes be discriminated from one another better than they are detected. A Signal Detection analysis of the information used to perform these psychophysical judgments suggests that properties exist in the visual system which favor the ability to discriminate over the ability to detect. Two candidate properties are inhibition and/or correlated noise between tuned spatial frequency analyzers. The extent to which such processes occur is reflected by the parameters defining sensory response distributions in a Signal Detection model of pattern perception. A method by which these parameters can be estimated is described, and several alternative response spaces are discussed. (Author)

**A82-22962** **Model of visual detection and discrimination.** J. P. Thomas (California, University, Los Angeles, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 507-510. 6 refs. Grant No. NIH-EY-380.

A model of visual detection and discrimination is presented which incorporates recent concepts of multiple, spatially-tuned channels. Predictions about performance on detection and discrimination tasks are derived and supporting data presented. The predictions and data are inconsistent with threshold-type models. (Author)

**A82-22963** **Required performance levels for autocueing devices.** D. C. Fulkerson (Hughes Aircraft Co., El Segundo, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 511-515. Research supported by the Hughes Aircraft Co.

Acquisition of tactical targets embedded in synthetic aperture radar (SAR) imagery was examined in this study. Experienced radar operators saw static scenes with either nine, five, two, or zero possible targets annotated, representing the application of three hypothetical autocueing devices and a no-autocueing baseline condition. In the autocueing conditions, the true target was always annotated, along with a variable number of false alarms, based upon the sophistication of the hypothesized autocuer. With time and probability performance measures taken, a significant improvement in target acquisition behavior was achieved only with the most sophisticated autocuer. This was most evident for the more difficult target types. (Author)

**A82-22964** **Is image quality important.** C. P. Greening (Northrop Corp., Hawthorne, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 516-520. 12 refs. Contract No. N60530-78-C-0188.

The problem addressed by the study was to explore the feasibility of predicting air-to-ground target acquisition performance with electro-optical systems, based on 'real world' data, in terms of specifiable, measureable, sensor image quality characteristics. The approach was to review flight test and simulator test results, rejecting those which did not permit comparison of different image qualities under similar conditions. The surviving data sets did not, in general, use comparable measures of either image quality or performance. Consequently, a review of the relevant measures of those variables was also made. To the limited extent permitted by the data, it can be stated that (1) poor image quality sets performance limits, and (2) further improvement of adequate imagery results in rapidly diminishing benefits. (Author)

**A82-22955** **Enhancement processes in the visual detection of barely perceptible targets.** M. Williams, N. Weisstein, and J. Brown (New York, State University, Buffalo, NY). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 521-525. Abridged.

Experiments are described in which six context patterns yielded significantly different ratings of perceived depth and three context patterns yielded significantly different ratings of perceived connectedness. Observers judged which of two target lines was presented; the line was briefly flashed by itself or was accompanied by one of the nine context patterns. The context pattern appeared simultaneously or followed the target after 30 to 270 msec. Results show that both the variations in perceived depth and the variations in perceived connectedness produced differences in metacontrast functions. Visual response to different spatial frequencies was also tested by blurring the stimuli, thereby diminishing visual response to high spatial frequencies. Results show that blurring the stimuli had striking effects on the temporal functions of accuracy versus delay of the context patterns varying in perceived depth (metacontrast functions): the functions for the patterns rated higher in depth became more like those for the flatter patterns. C.R.

**A82-22956** **Flight parameters and observer performance in RPV target acquisition.** H. Mutschler (Fraunhofer-Institut für Informations- und Datenverarbeitung IITP, Karlsruhe, West Germany). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 526-530. 5 refs. Research supported by the Bundesministerium der Verteidigung.

Observer's performance in a situation simulating real-time air-to-ground reconnaissance by means of a remotely piloted vehicle (RPV) has been investigated as a function of flight altitude, speed, line of sight of the sensor, and frame rate. Variations of flight and optic parameters within the limiting conditions of high speed and low-level flight result in only slight variations of observer target acquisition performance. However, from the military point of view, the resulting detection rates of 10-50% are too low. This can be corrected by reducing target uncertainty (multiple reconnaissance missions) or by combining observers in a team. V.L.

**A82-22957** **Effects of video bandwidth compression processing on operator performance in the Mini-RPV system.** A. K. Agin (Hughes Aircraft Co., Display Systems Dept., El Segundo, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 531-535. Grant No. DAAB07-78-C-2415.

The purpose of this study was to evaluate operator target detection and recognition performance under realistic conditions to provide design information for the Army Mini-RPV (Remotely Piloted Vehicle) system. Bandwidth compression, atmospheric attenuation, target numerosity, target aspect angle, target type, and background complexity were investigated. The tasks included detection and recognition of realistic tactical vehicle targets with a 256 by 282 element video system. There were five bandwidth compression levels with respect to a 3.02 megabit per second uncompressed rate. Detection performance was significantly degraded at a 15:1 compression ratio, and recognition was degraded at a 7.5:1 comoression ratio. Both target numerosity and aspect angle were associated with significant differences in performance. Atmospheric attenuation, target type and background complexity effects were not statistically significant. (Author)

**A82-22958** **Canopy induced displacement evaluation.** M. L. Frazier (USAF, Flight Test Center, Edwards AFB, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 552-556.

The optical properties of an aircraft canopy are examined with reference to the target displacement caused by the curved canopy, eye position effect on target displacement, and elevation displacement effects on air-to-air and air-to-ground weapons delivery. It is found that the average absolute target displacement increases with the viewing height and that there is a considerable parallax between the right and left eyes at 1 in. below design eye position. It is concluded that the integrated effects of pilot eye position, head-up display symbology, and canopy optics must be evaluated early in the system acquisition process. V.L.

**A82-22959** **Operational performance measures for air combat - Development and application.** A. P. Ciavarelli, A. M. Williams, and F. Krasovec (Dunlap and Associates, Inc., La Jolla, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings.

Santa Monica, CA, Human Factors Society, Inc., 1980, p. 560-564. 10 refs. Contracts No. N61339-77-C-0167; No. N61339-78-C-0136.

The development, operation, and effectiveness of the Navy Tactical Aircrew Combat Training System (TACTS) are reviewed. TACTS was developed to use operational aircraft mock-ups to simulate realistic dogfights which could be recorded, monitored, and graded. Reference scores were developed to score missile hits as a measure of task accuracy, to measure and set group performance standards, and to set standards for detection of targets and overall engagement outcomes. Best and worst case scenarios have been detailed for kill or be killed results in terms of percentages of success due to radar sighting or not, or first shot or not. Pilots undergoing TACTS training are also provided with data from the Performance Assessment and Appraisal System, which allows comparison between their actions and responses with statistically determined optimum performance parameters. M.S.K.

**A82-22960** **Operational performance measures for carrier landing - Development and application.** C. A. Brictson, S. T. Breidenbach (Dunlap and Associates, Inc., La Jolla, CA), and G. R. Stoffer (U.S. Navy, Naval Training Equipment Center, Orlando, FL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 565-567. 17 refs. Contract No. N61339-75-C-0106.

Fifteen years of carrier landing performance criteria development and applications are described. An offshoot of the research resulted in the emergence of an automated performance measurement and appraisal system designed to enhance the effectiveness of night carrier landing. (Author)

**A82-22961** **Development and inflight testing of a multimedia course for instructing navigation for night nap-of-the-earth flight.** B. A. Smith (Canyon Research Group, Inc., Fort Rucker, AL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 568-571. 7 refs.

This paper describes the development and evaluation of a course of instruction to train Army aviators to navigate during flight operations at nap-of-the-earth (NOE) altitudes at night. The course was developed to provide instruction in map interpretation and terrain analysis using both unaided (naked eye) and aided (Night Vision Goggles) vision, and incorporated lecture, textual, and visual materials. Evaluation of the course was carried out in the UH-1 helicopter flying at NOE altitudes at night. Results of the evaluation indicated that a group of student pilots who received instruction in the course navigated at night along an NOE route with significantly more accuracy than did a control group. Implications of these results for training NOE night navigation are discussed. (Author)

**A82-22962** **Cognitive styles and the acquisition of a complex aerial maneuver.** J. M. Koonce and T. M. McCloy (U.S. Air Force Academy, Colorado Springs, CO). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 578-580. 6 refs.

Approximately equal number of male (45) and female (43) Air Force Academy cadets learned a complex aerial maneuver (chandelle) on a desk-top flight simulator. Prior to the introduction of the complex maneuver all subjects were trained to criterion level on four basic instrument flight maneuvers. Then they learned how to fly the complex maneuver with the number of trials required to reach criterion performance as the dependent variable. Results indicated cognitive factors were very significant in predicting complex maneuver performance. Additionally, individually tailoring the regression equations by sex as opposed to utilizing a general overall regression equation greatly enhanced predictive capability. (Author)

**A82-22963** **The effects of social facilitation on vigilance performance.** K. Unger, C. G. Halcomb, R. P. McGlynn (Texas Tech University, Lubbock, TX), M. G. Copeland (TRW, Inc., Redondo Beach, CA), and J. T. Roth (Applied Science Associates, Valencia, PA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 595-599. 14 refs.

Two experiments were conducted to determine if vigilance performance could be reliably improved by the presence of potentially evaluative or nonevaluative coactors, and to examine differential predictions regarding the necessary conditions for social facilitation. Neither the mere presence of a coactor nor the presence of evaluation potential was found to improve performance. (Author)

**A82-22964** **Theories of vigilance - A modern perspective.** M. Loeb (Louisville, University, Louisville, KY) and E. A. Alluisi. In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 600-604. 45 refs.

Principal theories of vigilance are categorized in terms of learning, neurological, psychophysical, and information processing models. Inhibition and reinforcement theories are reviewed in the light of available experimental evidence, and the difficulties inherent in observing all observing responses are noted. Arousal and habituation neurological models are examined, with mention made of the multidimensional nature of cortical rhythms associated with arousal. Psychophysical models comprise expectancy and probability matching scenarios, with experimental results indicating that expectancy of stimulus causes a decrement in performance due to fewer stimuli than expected or predicted. Finally, information processing models are considered in terms of a filter theory and channel capacity, with the observation that high rates of information loading eventually cause performance decrements which are different from those of habituation criteria. M.S.K.

**A82-22965** **New approaches to the electrophysiological characterization of vigilance behavior.** J. C. Miller (Human Factors Research, Inc., Goleta, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 606-610. 11 refs.

Justifications for two expanded approaches to the assessment of the physiological correlates of vigilance behavior are presented. The approaches include the consideration of heart rate within the context of cardiovascular function and the short-epoch analysis of the spontaneous EEG. (Author)

**A82-22966** **Recognition of VDU presented colors by color defective observers.** H. Bergman and F. Duijnhouwer (Utrecht, Rijksuniversiteit, Utrecht, Netherlands). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 611-615. 10 refs.

In order to determine the extent to which color defective observers are able to recognize colors presented on a VDU, a choice reaction time experiment was carried out. The experiment determined the effect of advance training, stimulus size and simultaneous color contrast on the performance of subjects, segregated into groups according to the nature of their color vision defect. Analysis of the data shows that type of color vision defect and the simultaneous color contrast influence the number of errors made by the subjects. Suggestions for future experiments and for the possible improvement of performance are given. (Author)

**A82-22967** **Eyes and glass curtains - Visual accommodation, the Mandelbaum effect, and apparent size.** R. A. Benel (Illinois, University, Urbana, IL). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 616-620. 8 refs. Contract No. F49620-77-C-0117.

During vehicle operation visual acquisition of information frequently occurs through an interposed surface, e.g., a windscreen. Then the eye may focus either the windscreen or the distant object. Circumstances have been documented where the interposed surface provides a more or less obligatory stimulus to accommodation. The apparent size of an object has been shown to relate to accommodation distance. These experiments investigated the relationship between the trapping of accommodation at a near distance (Mandelbaum effect) and changes in the apparent size of an object. In experiment I, 24 observers reported smaller size with nearer accommodation and larger apparent size with farther accommodation at a better than chance rate. The 12 observers in experiment II showed a consistent diminution of mean apparent size of an object as a screen was moved nearer to them. These two situations provide interposed texture analagous to windscreens. The implications for vehicle control are discussed. (Author)

**A82-22968** **Scaling of perceived optical distortion.** F. E. Ward and D. F. Quinn (Wright State University, Dayton, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 622-625.

Two studies have been carried out to explore scaling of patterns that stimulate optically induced visual distortions. In the first study, subjects rank-ordered computer-generated sine wave patterns in order of distortion severity. The rankings corresponded to the physical parameters of frequency and amplitude. In the second study, all possible pairs of 48 stimuli were rated on a dissimilarity index. The data were analyzed by a nonmetric multidimensional scaling procedure. It is found that a third dimension, that is best described as 'waviness' or 'flat versus depth', is necessary, in addition to frequency and amplitude, to adequately describe the data. V.L.

**A82-22969** **Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting.** E. Shvartz, J. G. Gaume, R. T. White, R. C. Reibold (Douglas Aircraft Co., Long Beach, CA), and E. J. Glassford (Mercy Hospital and Medical Center, San Diego, CA). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 639-642. 5 refs.

Seven young men were administered a series of tests during 5 hours of quiet sitting performed two times on two different days. On one day, a massage-type seat cushion was used for 14 min/hour. Hemodynamic responses (measured by an impedance plethysmograph), skin temperature, body weight, urine changes and subjective reactions were noted. Changing from supine to sitting brought on decreases in stroke volume and leg blood flow and blood pooling in the calf and thigh. When the seat cushion was not activated, 5 hours of sitting resulted in a continuous decrease in calf blood flow and in an increase in calf venous pooling; increase in blood pressure and stable cardiac output; very low urine output and a large increase in skin temperature discomfort. The seat cushion caused a substantial exchange of the stagnant blood in the calf and thigh; a tendency to increase calf and thigh blood flow and decrease calf and thigh venous pooling; and less subjective discomfort sensations. The results indicate that the principal adverse hemodynamic effect of prolonged sitting is blood pooling in the lower legs, which, however, is compensated by an increase in blood pressure. C.R.

**A82-22970** **The effects of left hand fatigue on right hand performance.** M. E. Benton and R. P. Bateman (Texas A & M University, College Station, TX). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 643-646.

Twenty-five subjects performed tracking tasks with the right arm before and after cranking a bicycle ergometer with the left arm. Three experimental conditions consisted of cranking the ergometer for 60, 90, and 120 seconds. The results indicate there was a significant decrement in tracking performance the first ten seconds after each of the cranking periods. By thirty seconds after cranking, tracking performance returned to pre-cranking level for each of the conditions. The decrement was not attributable to heart rate or breathing rate increases which remained for periods of up to five minutes. The crossover fatigue effect warrants further study. (Author)

**A82-22971** **Some current issues in workload assessment.** F. T. Eggemeier (Systems Research Laboratories, Inc.; Wright State University, Dayton, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 669-673. 15 refs.

Two current issues related to operator workload assessment include the effects of operator strategy on levels of load experienced by the operator and the nature of operator information processing capacities and resources. Several current positions related to each of these issues are presented, and implications for workload assessment are discussed. It is concluded that workload is a multidimensional construct which requires the development of an assessment battery which should include subjective, performance-based, and physiological measures. (Author)

**A82-22972** **Enhancing operator acceptance and noninterference in secondary task measures of workload.** C. A. Shingledecker (Systems Research Laboratories, Inc., Dayton, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 674-677. 7 refs.

A serious disadvantage of many available secondary task measures of operator workload is that they are difficult to employ during later stages of system design and evaluation. Common problems with traditional laboratory tasks include poor operator acceptance and the potential for intrusion on primary tasks. Two methods designed to overcome these limitations are being investigated at the Air Force Aerospace Medical Research Laboratory. In order to improve integration of the measurement task with the operator's duties, realistic aircraft radio communications activities have been developed as secondary tasks. Analytical and subjective methods have been employed to develop communications tasks with scaled workload values. A second project has focused on further development of the interval production task as a workload metric. This task has minimal response requirements and appears to act as an index of load rather than a reserve capacity test. (Author)

**A82-22973** **Steady state average evoked potentials as a measure of tracking difficulty.** G. F. Wilson (Systems Research Laboratories, Inc.; Wittenberg University, Springfield, OH). In: Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings. Santa Monica, CA, Human Factors Society, Inc., 1980, p. 678-680.

The utility of steady state average evoked potentials (AEPs) to measure the difficulty of a tracking task will be reported. Medium (14 Hz) and high (50-56 Hz) frequency sine wave modulated light was used to evoke steady state AEPs while subjects performed a tracking task. Three levels of difficulty, based upon each subject's ability, were used in the single axis visual tracking task. The phase lag between stimulus input and the AEP waveform was found to be significantly related to task difficulty. Increasing difficulty levels were associated with greater amounts of phase lag of the AEPs during the high frequency stimulation. Neither the phase lag nor the amplitude of the medium frequency AEPs were significantly affected by the level of tracking difficulty. Each subject was found to have one particular frequency of stimulation in the high range which produced an enhanced AEP amplitude. This suggests that researchers using high frequency stimulation with sine wave modulated light should test each subject to find the frequency which produces the maximal amplitude. (Author)

**A82-22976 *** **Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979.** Edited by J. Billingham (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, CA). Cambridge, MA, MIT Press, 1981. 478 p. $20.

Papers are presented concerning the nature and distribution of life in the universe, particularly in the areas of the origins of life, life-supporting environments, the evolution of life in the Galaxy, and the detectability of technological civilizations. Specific topics include a preliminary discussion of the role of life in the universe, followed by examination of the role of water in thin films and cold environments in the origin of life, the relation between atmospheric composition and evolution, the possibility of planetary orbits in multiple star systems, and the prospects for detecting extrasolar planetary systems. Attention is also given to the origin of protein synthesis, the evolution of intelligence in multicellular organisms, the manifestations of advanced civilizations, and plans and principles for SETI. A.L.W.

**A82-22978 * #** **Organic chemical evolution.** S. Chang (NASA, Ames Research Center, Moffett Field, CA). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 21-46. 14 refs.

The course of organic chemical evolution preceding the emergence of life on earth is discussed based on evidence of processes occurring in interstellar space, the solar system and the primitive earth. Following a brief review of the equilibrium condensation model for the origin and evolution of the solar system, consideration is given to the nature and organic chemistry of interstellar clouds, comets, Jupiter, meteorites, Venus and Mars, and the prebiotic earth. Major issues to be resolved in the study of organic chemical evolution on earth are identified regarding condensation and accretion in the solar nebula, early geological evolution, the origin and evolution of the atmosphere, organic production rates, organic-inorganic interactions, environmental fluctuations, phase separation and molecular selectivity. A.L.W.

A82-22979 # **Sulfur - Fountainhead of life in the universe.** B. C. Clark. In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 47-60. 26 refs.

The important role of sulfur and sulfur compounds in biology, planetary evolution and the universe as a whole is discussed, and the possibility of the existence of sulfur-based life in otherwise inhospitable environments is considered. The high abundance of sulfur, which is produced during explosive oxygen burning in supernovas, in the universe is noted, and its roles in the evolution of the earth and other planets, and in biological energetics and enzyme catalysis are examined. The significance of the discovery of small, isolated, ecosystems at the mouths of active hydrothermal vents in the Galapagos rift zone for the existence of chemoautotrophs using sulfur as an energy source is considered, and it is concluded that chemoautotrophy based on sulfur may allow the widening of the zone about each star believed capable of supporting life. A.L.W.

A82-22980 # **Role of interfacial water and water in thin films in the origin of life.** D. M. Anderson (New York, State University, Buffalo, NY). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 61-74. 16 refs.

The properties of clay-water interfaces at low temperatures are examined in view of the probable importance of such regions in abiotic syntheses of the chemical precursors of cellular life. Particular attention is given to the structure and formation of the liquid-like layers at ice-ice, ice-air, silicate-water-air, silicate-water-silicate and silicate-water-ice interfaces at temperatures below 0 C, and the great physical and chemical diversity of these interfaces is pointed out. It is shown that water film environments could have supported a wide variety of organic reactions important in the origin of life due to the stabilizing presence of clay substrates, the catalytic properties of the clay surfaces, the various geometrical characteristics of the clay surfaces and the presence of liquid phase at relatively high water activities below the freezing point of water. A.L.W.

A82-22981 * # **Atmospheres and evolution.** L. Margulis (Boston University, Boston, MA) and J. E. Lovelock (Reading, University, Reading, Berks., England). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 79-100. 24 refs. Research supported by Boston University and Guggenheim Foundation; Grant No. NGR-22-004-025.

Studies concerning the regulation of the earth atmosphere and the relation of atmospheric changes to the evolution of microbial life are reviewed. The improbable nature of the composition of the earth atmosphere in light of the atmospheric compositions of Mars and Venus and equilibrium considerations is pointed out, and evidence for the existence of microbial (procaryotic) life on earth as far back as 3.5 billion years ago is presented. The emergence of eucaryotic life in the Phanerozoic due to evolving symbioses between different procaryotic species is discussed with examples given of present-day symbiotic relationships between bacteria and eucaryotes. The idea that atmospheric gases are kept in balance mainly by the actions of bacterial cells is then considered, and it is argued that species diversity is necessary for the maintenance and origin of life on earth in its present form. A.L.W.

A82-22982 # **Origin and evolution of continents and oceans.** K. K. Turekian (Yale University, New Haven, CT). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 101-110. 21 refs.

The growth histories and origins of the continental and oceanic crust and oceanic basins on earth are discussed. Isotopic constraints on the origin of crustal and midocean ridge materials are examined, and it is noted that heat generated by the radioactive decay of U, Th and K must have been the driving force for the transformation of undepleted mantle into depleted mantle by the formation of continental crust. The question of whether the oceans are increasing in volume is considered, and it is contended that water and other volatiles were released to the surface early in the history of the earth, so that there need be no correlation with continental crust formation and the volumetric growth of the oceans. Finally, the apparent age of the continents (3.8 billion years) is attributed to the destruction of continental crust upon reinjection into the mantle at a time when mantle resorption was more efficient than presently. A.L.W.

A82-22986 # **Constraints on early life by earth's accretional and preaccretional development.** G. Arrhenius (California, University, La Jolla, CA). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 125, 126. Abridged.

Despite the importance of the thermal state of the earth and the properties of the primordial ocean-atmosphere system for the origin of life, the accretionary history and early evolution of the earth remain hypothetical. Recent exploration of the moon, Jupiter and the terrestrial planets including the earth has, however, clarified some earlier limitations on the primordial earth environment and uncovered new information with a direct bearing on the problem. The observational framework supports a variety of accretional hypotheses, leading to drastically different early states but all sharing such common concepts as evolution via planetesimals and with sterilizing and pyrolyzing runaway accretion at some stage. Future space exploration should further narrow the range of possible states for the early earth and other planets. A.L.W.

A82-22991 # **Transfer RNA and the origin of protein synthesis.** A. Rich (MIT, Cambridge, MA). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 211-228. 19 refs.

The current state of knowledge regarding the developments which led to the establishment of life on this planet is briefly reviewed. One of the central research goals is the definition of the physical nature of the interactions which occur between messenger RNA (mRNA) and transfer RNA (tRNA). Investigations regarding the structure of tRNA are considered, taking into account studies conducted with yeast phenylalanine tRNA. Attention is given to hydrogen bonding and base stacking, tRNA in solution, initiator and chain-elongation transfer RNAs, and the mechanism whereby nature differentiates between different tRNA species during aminoacylation. It is concluded that there are currently no convincing models for the origin of polynucleotide-directed polypeptide formation. However, it is believed that the molecular mechanics of mRNA reading in the ribosome as well as peptide bond formation may provide a clue to its origin. G.R.

A82-22992 # **Emergence and radiation of multicellular organisms.** J. W. Valentine (California, University, Santa Barbara, CA). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 229-257. 41 refs.

An attempt is made to assess the factors which led to the origin of major (phylum-level) multicellular grades and ground plans. The question is considered whether an evolution of multicellular grades starting a second time under the same conditions would lead to the same results. Attention is also given to the results of an evolution repeated under different environmental conditions as on another planet. The fossil record of metazoan body plans is discussed along with aspects of macroevolution and microevolution, scenarios of quantum events in evolution, and the general case of multicellular evolution. It is concluded that macroevolution is probably a universal feature of life. Macroevolutionary factors should affect multicellular diversification patterns on other worlds, much as they do on earth, although the results would vary with environmental conditions. Microevolution, however, might be an entirely different matter elsewhere. G.R.

**A82-22993** # **Speculations on the evolution of intelligence in multicellular organisms.** D. A. Russell (National Museum of Natural Sciences, Ottawa, Canada). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 259-275. 56 refs.

An understanding of the factors which can affect the evaluation of intelligence is important in evaluating the Cosmos as a home for intelligent organisms. The brain is the organ of intelligence. There is evidence of a correlation between brain size and intelligence. On earth, more than 700 million years elapsed between the appearance of multicellular metazoans and Homo sapiens. In order to discover to what extent encephalization rates may have changed during this interval, an investigation is conducted regarding the distribution of the highest levels of encephalization through time. The biology of encephalization is discussed, taking into account temperature, time, biogenic environmental diversity, area, mass extinctions, adaptation, trophic level, metabolism, dimensional complexity, and parental care. It is concluded that for the development of intelligent organisms, the general environmental framework of a planet should resemble that of earth during the past half-billion years. G.R.

**A82-22994** # **Evolution of technological species.** B. Campbell (L.S.B. Leakey Foundation, Pasadena, CA). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 277-285.

The term 'technological species' is used to denote any species of animal which employs tools. It is pointed out that the use of tools is not confined to man. Examples include the Galápagos finch Cactospiza, which uses a cactus spike to poke out insects embedded in the branches or trunks of trees. A brief review of terrestrial technology is conducted. The development of facilities and fire was critical in the establishment of a metal technology. Adequate resources derived from agriculture were essential for the development of advanced technology. At all stages, the ratio of cost to reward had to be small and the technological development had to follow an appropriate cultural preadaptation. Attention is given to the factors which made this development possible, taking into account the evolution of social groups. In an extraterrestrial context, a description is given of the characteristics to be expected in the case of organisms with radiotelescopes. G.R.

**A82-22996** # **Biochemical keys to the emergence of complex life.** K. M. Towe (Smithsonian Institution, Washington, DC). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 297-306. 40 refs.

If there is intelligent life elsewhere in the universe, it will probably be of the complex multicellular type. The considered investigation is concerned with the fundamental importance of two protein amino acids to the development of complex multicellular life on earth, taking into account hydroxyproline and hydroxylysine. The absence of these acids from the genetic code implies that they are relatively new with respect to biological evolution. It is found that the two amino acids are widely distributed among the higher forms of life but are generally absent from lower organisms. The evolution of the capacity for complex multicellular development on earth required over 2 billion years. This length of time appears to be good evidence that no combination of the 20 coded amino acids could be found that could produce a structural protein comparable to the extensin-collagen family. The development of entirely new amino acids was the real key to opening the way for complex multicellularity. G.R.

**A82-22997** * # **Gravity, lignification, and land plant evolution.** S. M. Siegel, B. Z. Siegel, and J. Chen (Hawaii, University, Honolulu, HI). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 307-316. 22 refs. Grant No. NGR-12-001-053; Contracts No. NASw-767; No. NAS2-6624; No. NAS2-8687.

Vascular plants began their occupation of the wetlands interfacing both terrestrial and marine environments at some point in early Paleozoic time. Chemical differences between green algae and vascular land plants are mainly related to an abundance of lignins in the land plants. Answers to questions relating to the phylogeny and adaptive significance of the lignins must depend on experiments and observations using contemporary plant material. A summary is provided of a series of such observations. It is found that the differences between modern Chlorophyta and vascular land plants cannot be explained in full on the basis of lignification alone. Nevertheless, the data point to the emergence of the primitive land populations into an oxygen-rich terrestrial world where the need for mechanical support and water conservation could be met by a single aerobic biochemical process connected to essential aromatic amino acids likely to be found in every cell. G.R.

**A82-22998** # **Evolution of man and its implications for general principles of the evolution of intelligent life.** C. O. Lovejoy (Kent State University, Kent, OH). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 317-329. 28 refs.

An investigation regarding the probability of intelligent life on suitable planets must consider one basic question concerning the existence of fundamental evolutionary trends which led to the appearance of man. The question is studied by taking into account three specific aspects. One is concerned with questions regarding the natural evolution of biological systems toward more complex states. It is found that there is no such trend toward complexity. The second problem involves the relation between increased intelligence and aspects of survival and reproduction. It is shown that there is no a priori advantage to intelligence. The evolution of cognition is found to be the consequence of a series of highly specific evolutionary events whose ultimate cause is traceable to selection for unrelated characters such as locomotion and diet. The conclusion is reached that intelligence is not the product of a general trend. Man is, therefore, a highly specific, unique, and unduplicated species. G.R.

**A82-23089** **Training for space.** G. L. Borrowman. *Spaceflight*, vol. 24, Mar. 1982, p. 129-132.

Specific aspects of training for space activities are reviewed, with particular attention paid to the experiences of the Soyuz crews, the make-up of the Shuttle crews, and to the presence of female astronauts. The basic Shuttle crew will consist of the commander, a pilot, and a mission specialist, who is usually a scientist, in addition to a payload specialist who will perform activities in a particular field of expertise, while otherwise having training in living, working, and responding to emergency situations in space. The negative effects of competitive personalities have been observed in spaceflight and current psychological profiling in choosing candidates for spaceflight are designed to avoid such traits. The choices of centile ratings for sizing spacesuits, window placements, and control reach distances are outlined, along with equipment necessities peculiar to women. M.S.K.

**A82-23136** † **Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth (Modelirovanie sinteza peptidopodobnykh soedinenii v litosfere pervobytnoi zemli).** G. A. Lavrent'ev, L. Iu. Rakitin, T. F. Strigunkova, and I. A. Egorov (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 261, no. 5, 1981, p. 1263-1267. 11 refs. In Russian.

Experiments were performed to study the possibility of the synthesis of peptide-like structure from amino acids in the presence of mineral catalyzers in the case of moisture fluctuations at temperatures below the water-boiling point. The results suggest that the formation of polymer molecules of peptide structure on mineral catalyzer substrates was a widespread phenomenon on the primeval earth at early stages of the existence of the condensed-water phase. This makes it possible to conclude that a great deal of the primeval lithosphere was conducive to the abiogenic synthesis of organic molecules, involving polymerization with the aid of mineral catalyzers. B.J.

**A82-23144** † **Changes in the activity of monoaminergic systems of the brain under conditions of adaptation to high altitude (Izmeneniia aktivnosti monoaminergicheskikh sistem mozga v usloviiakh adaptatsii k vysokogor'iu).** E. A. Gromova, V. A. Isabaeva, T. P. Semenova, T. M. Isakunova, and O. N. Li (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii

Vysokogor'ia, Frunze, Kirgiz SSR; Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 262, no. 1, 1982, p. 245-247. 12 refs. In Russian.

**A82-23166 † Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions (Faznost' reaktsii gipofiz adrenalovoi sistemy v usloviiakh vysokogor'ia).** D. T. Musabekov, O. K. Kabiev, and Iu. G. Grigor'ev (Kazakhskii Institut Onkologii i Radiologii, Alma-Ata, Kazakh SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 20-24. 10 refs. In Russian.

The phases and rhythms of the adaptive responses of the hypophysis-adrenal cortex system to extended exposure to conditions of chronic altitude hypoxia are investigated in order to gain insight into the temporal organization of hormonal mechanisms of adaptation to high-altitude conditions. Variations in total body weight, hypophysal and adrenal weight, and peripheral blood plasma 11-oxycortocosteroid concentration were determined in rats during a 120-day adaptation period to altitude at Tian'-Shan' (3340 m), and controls kept at Alma-Ata (847 m). Phasic variations in these parameters are found which are characterized by various periods different from those of any natural or latent low-frequency biorhythms. Results may have practical applications in the selection of optimal adaptation schedules under chronic altitude hypoxia and the prediction of individual responses to extremal conditions. A.L.W.

**A82-23167 † Morphological changes in the hematopoietic organs of rats under the influence of adrenalin (Morfologicheskie izmeneniia v krovetvornykh organakh krys pod vliianiem adrenalina).** A. S. Khil'ko (Slavianskii Pedagogicheskii Institut, Slavyansk, Ukrainian SSR) and B. A. Kamenev (Bazovyi Sanatorii Donbass, Slavyansk, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 40-45. 12 refs. In Russian.

Morphological changes in the bone marrow, spleen and lymph nodes resulting from injection of small doses of adrenalin are investigated as a model of the nonspecific stress response in rats. Changes in peripheral blood leucocyte contents were determined 2 h after the injection of adrenalin at a dose of 0.25 mg/kg, and compared with tissue morphologies. The injection of adrenalin is found to induce real changes in peripheral blood leukocyte composition consisting of varying degrees of either leucocytosis or leukopenia and a redistribution of the levels of each type of leucocyte. Changes in leucocyte composition are reflected by changes in the morphology of the blood-forming organs, which are characterized by an activation or suppression of blood formation in the leucocytotic and leukopenic reactions, respectively. Functional and morphological changes in response to adrenalin injection are thus capable of serving as a model of the disturbances brought about by stress states. A.L.W.

**A82-23168 † The condition of certain glycolytic and tricarboxylic acid cycle enzymes in intact and denervated skeletal muscles of the rat during cooling (Sostoianie nekotorykh fermentov glikoliza i trikarbonovogo tsikla v intaktnykh i denervirovannykh skeletnykh myshtsakh krys pri okhlazhdenii).** L. F. Shcherbak (Kievskii Meditsinskii Institut, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 46-51. 19 refs. In Russian.

**A82-23169 † Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle (Analiz deistviia izoprenalina na energotraty skeletnoi myshtsy).** N. I. Putilin, A. G. Kozlov, Iu. Iu. Men'shikh, V. I. Zav'ialov, and G. S. Pekach (Kievskii Meditsinskii Institut, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 52-55. 14 refs. In Russian.

The kinetics of the action of the beta-adrenomimetic isoprenaline on energy consumption in a working skeletal muscle is analyzed in order to investigate its mechanism of action. Heat production, work capacity and energy efficiency were measured as a function of the dose of isoprenaline as it varied between 5 x 10 to the -6th and 5 x 10 to the -9th g/ml in isolated preparations of the frog sartorius muscle. Nonlinear dose-response curves were obtained with extremum values at doses of 5 x 10 to the -8th and 5 x 10 to the -9th g/ml, which are attributed to desensitization by high doses of the drug. The results are used to derive values for the apparent Michaelis-Menten constant and the constant of substrate inhibition. It is noted that the condition of the muscle with respect to fatigue also determines the kinetics of adrenergic regulation. A.L.W.

**A82-23170 † The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs (Vliianie malykh priamolineinykh znakoperemennykh uskorenii na sostoianie slizistoi obolochki tonkoi kishki sobak).** T. V. Gladkii (Odesskii Gosudarstvennyi Universitet, Odessa, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1952, p. 65-71. 20 refs. In Russian.

Experiments carried out on 26 mongrel dogs show that the small intestine undergoes functional changes when subjected to 30 min of rectilinear sign-varying accelerations. The activity of certain enzymes changes, and the lumen of the vascular network in the mucous membrane increases. The number of goblet cells, together with the quantity of secretions, also increases. C.R.

**A82-23171 † The role of the lung in the metabolism of vasoactive substances (Rol' legkogo v metabolizme vazoaktivnykh veshchestv).** O. G. Tishkin and N. A. Temur'iants (Simferopol'skii Gosudarstvennyi Universitet, Simferopol, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 80-85. 42 refs. In Russian.

Among the many well established nonrespiratory functions of the lung, the most important involve the metabolism of vasoactive substances. The present paper reviews the role of the lung in the inactivation of serotonin, noradrenalin, bradykinin and prostaglandins E1, E2 and F2 alpha, the activation of angiotensin I, and the synthesis of angiotensin II, histamine, prostacycline and the SRS-A and ECF-A components of anaphylaxis. The consequent importance of lung metabolism in the anaphylactic reaction and in the development of lung pathologies is pointed out. A.L.W.

**A82-23172 † The effects of cold on catecholamine fluorescence in several structures of the rat brain (Vliianie kholoda na fluorestsentsiiu katekholaminov v nekotorykh strukturakh golovnogo mozga krys).** G. I. Borodaevskaia (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 86-88. 12 refs. In Russian.

**A82-23173 † The response of the microstructure of the cerebral subcommisural organ to a change in light cycle (Reaktsiia mikrostruktur subkomissural'nogo organa mozga na izmenenie svetovogo rezhima).** L. P. Siziakina and E. S. Gul'iants (Rostovskii Meditsinskii Institut, Rostov-on-Don, USSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 88-90. In Russian.

**A82-23174 † Variation in catecholamine excretion in adolescents under mountain conditions (Izmenenie ekskretsii katekholaminov u podrostkov v usloviiakh vysokogor'ia).** N. N. Nagnibeda and I. M. Vorobei (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 91, 92. 14 refs. In Russian.

**A82-23175 † Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration (Preduprezhdenie rastitel'nymi i vitaminnymi preparatami iazv zheludka, vyzyvaemykh vozdeistviem immobilizatsii, shuma i vibratsii, u krys).** N. P. Mashchenko, G. N. Lipkan, and G. N. Voitenko (Kievskii Institut Usovershenstvovaniia Vrachei, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Jan.-Feb. 1982, p. 103-106. 17 refs. In Russian.

**A82-23244 * The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation.** M. J. Seider, R. Kapp, C.-P. Chen, and F. W. Booth (Texas, University, Houston, TX). *Biochemical Journal*, vol. 188, 1980, p. 247-254. 39 refs. Research supported by the Muscular Dystrophy Association of America; Grant No. PHS-AM-19393; Contract No. NAS9-15388.

Skeletal muscle preparations using cut muscle fibers have often been used in studies of protein metabolism. The present paper reports an investigation of the effect of muscle cutting or stretching in vitro on the rates of protein synthesis and/or degradation. Protein synthesis and content, and ATP and phosphocreatine levels were monitored in soleus and extensor digitorum longus muscles from the rat with various extents of muscle fiber cuts and following stretching to about 120% the resting length. Rates of protein synthesis are found to be significantly lower and protein degradation higher in the cut muscles than in uncut controls, while ATP and phosphocreatine concentrations decreased. Stretched intact muscles, on the other hand, are observed to have higher concentrations of high-energy phosphates than unstretched muscles, while rates of protein degradation were not affected. Results thus demonstrate that the cutting of skeletal muscle fibers alters many aspects of muscle metabolism, and that moderate decreases in ATP concentration do not alter rates of protein concentration in intact muscles in vitro. A.L.W.

**A82-23251 † The role of aldosterone in the regulation of the water and salt balance in hot-shop workers of the metallurgical industry (Ob uchastii al'dosterona v reguliatsii vodno-solevogo balansa u rabochikh goriachikh tsekhov metallurgicheskogo proizvodstva).** V. I. Dorofeeva and A. K. Merzon (II Donetskii Meditsinskii Institut, Donetsk, Ukrainian SSR). *Vrachebnoe Delo,* Oct. 1981, p. 104-106. 9 refs. In Russian.

**A82-23252 † The pharmacology of ocular hemodynamics /Review/ (Farmakologiia gemodinamiki glaza /Obzor/).** V. S. Iasnetsov, A. S. Bozhefatov, and N. M. Iasnetsova (Smolenskii Meditsinskii Institut, Smolensk, USSR). *Farmakologiia i Toksikologiia,* vol. 44, Mar.-Apr. 1981, p. 233-238. 89 refs. In Russian.

The effects of various pharmacological substances on ocular hemodynamics are reviewed in light of the importance of vascular disorders in the pathogenesis of distrophic retinal lesions and decreases in visual function. Particular attention is given to vasodilators with myotropic action, cholinomimetics and anticholinesterases, cholinolytic agents, adrenomimetics, adrenal and sympathetic blockers, local anesthetics, osmotic agents, hormonal preparations, oxygen, and individual substances including radioactive iodine, heparin, prostaglandins and fonurite. A.L.W.

**A82-23253 † Changes in the temporal parameters of visual perception under the influence of psychostimulants (Izmenenie vremennykh parametrov zritel'nogo vospriiatiia v usloviiakh deistviia psikhostimuliatorov).** N. K. Barkov and A. I. Machula (Ministerstvo Zdravookhraneniia SSSR, Vsesoiuznyi Institut Obshchei i Sudebnoi Psikhiatrii, Moscow, USSR). *Farmakologiia i Toksikologiia,* vol. 44, Jan.-Feb. 1981, p. 12-14. 5 refs. In Russian.

The effects of small doses of various psychostimulants on the temporal characteristics of visual perception in the cat are investigated. Experiments were performed within the framework of a conditioned response elicited by the presentation of visual stimuli of two types for periods from 500 to 4000 msec. The administration of phenamine (0.2 mg/kg), sydnocarb (1.5 mg/kg) or cocaine (0.5 mg/kg) is observed to increase the percentage of correct stimulus identifications for stimulus durations less than 3 sec, at which all identifications were correct in all circumstances. Catinon, at a dose of 0.5 mg/kg, on the other hand is observed to increase the exposure time required to achieve the same correct response rate. A.L.W.

**A82-23254 † Influence of interactions of hearing and vibratory sensations on the masking effect (Vliianie vzaimodeistviia slukha i vibratsionnoi chuvstvitel'nosti na effekt maskirovki).** M. L. Shapiro (I Gorodskaia Bol'nitsa, Nizhnii Tagil, USSR). *Vestnik Otorinolaringologii,* May-June 1981, p. 13, 14. In Russian.

The influence of interactions of hearing and vibratory sensation on the masking effect of low-frequency noise on auditory perception are investigated. Experiments were performed in which a sound conductor attached to a tuning fork at one end was held against the mastoid processes of subjects sitting in a quiet room or in a chamber with low-frequency background noise. Measurements of auditory thresholds made with the subject grasping and not grasping the sound conductor reveal that the vibratory sensations encountered upon hand contact with the conductor interact with auditory sensations to reduce the masking effects of low-frequency noise on the perception of tuning fork signals. Results may be useful in the understanding of the pathogenesis of noise and vibration induced damage to the auditory analyzer. A.L.W.

**A82-23255 † Vestibulovascular responses in inner ear dysfunction (Vestibulososudistye reaktsii pri disfunktsii vnutrennego ukha).** E. I. Petrova, L. Ia. Andriako, O. A. Buianovskaia, and I. Ia. Iakovleva (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii,* Nov.-Dec. 1981, p. 8-13. 12 refs. In Russian.

Results are presented of comprehensive studies of systemic circulation in patients suffering from attacks of systemic vertigo. Vestibular functions, blood biochemistry and circulatory condition as indicated by arterial pressure dynamics, blood systolic and minute volumes, peripheral resistance and pulse wave propagation rate were evaluated in graded angular acceleration tests on 30 patients with Meniere's disease, and 20 with similar diseases of the labyrinth, induced accompanying cervical osteochondrosis and autonomic vascular dystonia. Three classes of vestibulovascular responses to rotatory stimulation, are found, characterized by (1) increased heart rate and arterial pressure and decreased pulse pressure, analogous to the reactions of normal subjects; (2) reductions in large vessel tonus, pulse wave propagation rate and peripheral resistance and increases in systolic and minute blood volumes, indicative of an inadequate reaction; and (3) hemodynamic disturbances leading to a vestibular crisis. Results demonstrate the efficacy of hemodynamic studies in conjunction with vestibular stimulation in monitoring inner ear dysfunctions. A.L.W.

**A82-23256 † Phase phenomena in the vestibular analyzer - Vestibular recruitment (Fazovye iavleniia v vestibuliarnom analizatore - Vestibuliarnyi rekruitment).** N. S. Blagoveshchenskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Vestnik Otorinolaringologii,* Nov.-Dec. 1981, p. 3-8. 10 refs. In Russian.

It is noted that underlying the concept of vestibular recruitment are vestibular reactions that are inadequate with respect to the strength of the irritation and that can be regarded as phase phenomena. These latter long ago received the attention of the classical school of Soviet physiology (equalizing, paradoxical, inhibitory phases). Since this recruitment is seen with both peripheral and central lesions of the analyzer, it is incorrect to consider its importance local. Vestibular recruitment is especially pronounced in breakdowns of compensating/adaptive mechanisms during the acute and subacute stages of illness. It is noted that electronystagmography makes it possible to accurately determine phase phenomena in the vestibular analyzer. C.R.

**A82-23257 † Changes in the posture of healthy rats after the intracranial introduction of brain extracts from animals with experimental vestibulopathy (Izmeneniia pozy u zdorovykh krys posle intrakranial'nogo vvedeniia ekstraktov mozga zhivotnykh s eksperimental'noi vestibulodatiei).** G. N. Kryzhanovskii, V. K. Lutsenko, M. Iu. Karganov, and V. I. Torshin (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 92, Oct. 1981, p. 404-406. 9 refs. In Russian.

The possibility of reproducing a pathological state in healthy animals with extracts from an injured brain is investigated on a model of experimental vestibulopathy. Unilateral lesions of the vestibular system are limited by the Deiters' nucleus. In certain cases hyperactivity is induced and in others the nucleus is broken down; this manifests itself in clinically different types of vestibulopathy. It is noted that, with the model used here, the vestibular rotation syndrome can be clearly seen. C.R.
